Dee, I took the day off today and put up a 20 meter dipole and I can "match" like a dandy. This would lead me to believe that there might, in fact, have been some slight change in my 10 meter dipole that I just can't see. This change, if it exists, could be the problem.
My dipole is indoors up in the upper most apex of my attic. I had hoped that this would put off any weather related problems but it just may be some sort of normal corrosion that's the problem.
The 10 meter dipole antenna will "match" on 28.3 and 28.4, but ceases to "match" at 28.5 and above.
I never actually saw the carbon that was blamed for the previous "match" problem. I just took the repair shop at their word. When I took out the tuner this time and gave it a good inspection, I saw no evidence of arcing or carbon build-up.
I have tomorrow off as well, so I think that I'll just start with 2 new connectors on my feed line and work from there. If this fixes things, I'll respond to this newsgroup with the good news and a follow-up report.
Thanks for your input on this. I never even considered an antenna analyzer. I have to check them out in the MFJ catalog.
I'm kind of a 10 meter addict and this is the time of year that I get to curl up in my shack on the weekends and indulge myself.
Thanks again, Dee.

Do you really want to get a new battery for an old rig?

A new battery = $50 or so.
A new single-band HT = $125

If your old rigs can't do CTCSS tones, then chuck them. Most repeaters in
big cities require such tones.

Source record: 24409

So if I spend $250 I can either get five 1000mAh battery packs for my one single-band and one dual-band rig, or I can get two single-band rigs, each with a little bitty 600mAh pack?

It's late and I'm being snippy. It's a good thing to point out, particularly since any one of us can be penny wise and pound foolish. In this case I believe the radios to be in good condition, and other than being large enough that I can actually push the buttons they have all the modern conveniences (including CTCSS).

|>
|
| Once you have the basic six phases, the addition of small "interphase
| transformers" or windings here and there can create any number of
| additional phases at small added expense. 24 phase rectifiers are
| common in big DC systems.

But you can go straight to 12 phases from 3 phases. Your power feed needs
to have a wye configuration (most common) and you need to be able to deal
with some phases having a different voltage than others. For a DC power
supply you use 3 transformers to get 6 phases, but you can get 12 phases
out of 6 transformers all having primaries attached to various combinations
of the 4 wires coming from the wye secondary of the utility transformer
secondary. These still need to be mixed voltage (on the primary of the DC
power supply transformers). The voltages in the US would be 120/208 or
277/480 or 347/600 depending on what your utility can provide.

Now once you have 12 phase power, then more transformers can give you even
more phases, and not just twice as many. What you can get now depends on
the individual secondary voltages, which don't have to be all the same, and
can give you a very interesting mix of phase possibilities. The OP mentioned

300+ phases. That could probably be accomplished with several transformers.

I don't see much need for motors above 3 phases and certainly not above 12. But DC power supplies might still get very good use of a lot of phases. One thing I've wondered is if a big zener (bank) can "clip off" a small ripple that a 12 phase power supply would have and virtually eliminate capacitors.

> kludge?

You have to start with a 2-phase oscillator for the
the basic Sin/Cos. Then lots of resistors and opamps
to get multiple arithmetic phase-shifted outputs. ISTR
that at about 8-phase rectification the harmonic
distortion effect of the residual ripple is sufficiently
attenuated by the oscillator itself.

## 10. Mod Wanted: ICOM 706 on 11 meters??

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-01 11:43:58 UTC
From: Paul Jordan <pauljordan@gci.net>
Message-ID: <vv81v8qj0tcce1@corp.supernews.com>
Source record: 24412

I know this will bring a lot of flak but, I'll explain why I want to do this.

I'm looking for a way to open up my 706 to 11 meters (a.k.a. Citizens Band) because the local snow plowers in the area use that band and I work for them. I've got my 706's mounted in my trucks and I'd rather not mount a CB radio and another antenna in the trucks.

Drop me an e-mail if you can and let me know if you've ever done this mod.

If my scanner would cover this band, that would be fine but, my mobile scanners don't cover CB..

Any help is greatly appreciated.

## 11. TS570 transmit problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-01 12:51:18 UTC
From: Kevin <nobody@home.org>
Message-ID: <9JUIb.192595$PD3.5900987@nnrp1.uunet.ca>
Source record: 24413

Can anyone shed any light on this?

My TS570 transmit power seems to be limited to minimum whatever level I choose through the menu. I don't have a power meter, but with a dummy load,it will only draw a maximum of just under 3 watts on any band. (cw). The AT doesn't work either. When I invoke it, the meter shows max. ref. power and a relay chatters until turn off the AT.
I'm suspisious that one or more relays in the bandswitching circuits have failed.
Otherwise it works fine as a QRP rig.
Thanks and 73 for 2004,

Kevin, VE1TV

(ve1tv at rac.ca)

I think you could use a standard 3 phase core, and lots of secondary
windings. From 3 phase to 2 phase 90 degrees shift can be done (and the
reverse as well).

A winding on a certain phase in series with a few turns on the next
phase will have a resulting phase that is a bit in the direction of that
next phase.

As you make separate turns per output phase it is easy enough to ajust
voltages to be approximately equal.

http://optoelectronics.perkinelmer.com/Catalog/Product.aspx?ProductID=CIA
for a product that seems to do something like this.

Thomas

Any of the 'extended coverage' mods would work. Check out www.mods.dk.

Now, it sounds like receiving only is fine for you. Go ahead and do
it. The 706 has a general coverage receiver. Just find out the
frequencies of the channels you want to hear and program 'em in. You
have plenty of memories to work with.

Jeff

http://www.sauderelectronics.com

1
Super Stud-750
Heavy duty super stud mount for 3/8" x 24 thread antennas. For all
frequencies up to 20K power
$12.00

2
SO-239 Stud
All brass SO-239 stud mount for 3/8" x 24 thread antennas.
$3.00

3
Lug Stud
All brass lug terminal type stud mount for 3/8" x 24 thread antennas.
$2.50

4
Nut
All brass chrome plated nut with 3/8" x24 thread.
$1.00

5
Replacement Stud
3/8" x 24 brass replacement stud.
$0.50

6
Nylon Washer 10 pack
3/8" center nylon washer for 1/2" hole (10 per pack)
$1.50

7
Antenna Stud .200
Brass 3/8" x 24 Antenna stud with .200 hole for 102" whips (with set
screws)
$2.50

8
Antenna Stud .100
Brass 3/8" x 24 Antenna stud with .100 hole (with set screw)
$2.50

9
H/D Stainless Quick Disconnect

Heavy duty stainless steel antenna quick disconnect with internal locking. Designed for BIG antennas with 3/8"x24 thread.
$20.00

10
Stainless Quick Disconnect
Stainless steel antenna quick disconnect with twist lock. Small body type for antennas with 3/8"x24 thread.
$10.00

11
Antenna Quick Disconnect
Antenna quick disconnect with knurl brass body. Twist lock type for 3/8"x24 thread antennas
$5.00

12
NMO to SO239 Adaptor
Changes NMO mount to an SO239 mount.
$7.00

13
NMO to 3/8
Changes NMO mount to a 3/8" x 24 thread mount.
$7.00

14
NMO Connector
NMO or Motorola style connector.
$4.00

15
NMO Rain Cap
Plastic rain cap for NMO type mounts. Protects mount when not in use.
$1.00

16
Molded Antenna Mount/Stainless
Molded antenna mount for 3/8" x 24 thread antenna with stainless steel center stud. Fits 3/4" hole.
$11.00

17
Molded Antenna Mount
Molded antenna mount for 3/8" x 24 thread antenna. Fits 3/4" hole.
$9.00

18
Clip Type BNC Mount/Hat Clip
Clip type BNC female to BNC male connector with 4' RG174U coaxial cable. Can clip HT antenna to hat or other uses.
$8.00

19
Tri-Mount
Three way mirror mount with an SO239 stud for 3/8"x24 thread antenna.
$6.00

20
UHF Magnetic Mount
Mag mount with 3" steel cup (black) with SO239 (UHF) hub and 12'
RG58AU coax w/PL259 connector.
$15.00

21
NMO Magnetic Mount
Mag mount with 3" steel cup (black) with Motorola (NMO) hub and 12'
RG58AU coax w/PL259 connector. TEMPORARILY OUT OF STOCK.
$13.00

22
Pick-up Truck Stake Bed Mount
Stake hole mount (stainless steel bracket) with SO239 stud for
3/8"x24 thread antennas. Fits most pick-up trucks.
$16.00

23
3" Magnet Mount
3" magnet mount with RG58AU stranded center wire, 95% shield. Will
hold 3/8"x 24 thread antenna. Made in the U.S.A.
$12.00

24
5" Magnet Mount
5" magnet mount with RG57AU stranded center wire, 95% shield. Will
hold 3/8"x 24 thread antenna. Made in the U.S.A.
$15.00

25
Nylon Dog Bones/4
Pack of 4 nylon dog bone insulators.
$5.00

26
Ceramic Dog Bones/4
Pack of 4 ceramic dog bone insulators.
$6.00

27
Egg Insulators/2
Pack of 2 nylon egg insulators.
$4.50

28
VHF/UHF SWR/Power Meter
Frequency 120-500MHz, max power 500 watts. Made by Workman
$45.00

29
VHF/UHF SWR Wattmeter
Frequency 120-500MHz, max power 150 watts, 50 ohm. Made by Workman.
$30.00

30
Motorola (NMO) Hub
Motorola hub can be adapted to fit many style of mounts. This is to replace or make your own mount.
$4.00

31
UHF (SO239) Hub
SO239 UHF hub can be adapted to fit many style of mounts. This is to replace or make your own mount.
$4.00

32
Tube Pin Straightener
New Mil Surplus tube pin straightener for 7-9 pin tubes.
$2.00

33
Replacement Mic Cord/Yaesu
Replacement microphone cord for Yaesu radios.
$6.00

34
Replacement Mic Cord/Others
Replacement microphone cord for Kenwood, Icom and others that take phone modual connector.
$6.00

35
SMA Dual Band HT Antenna
Dual band (2m-440) handheld antenna for newer HTs with SMA connection, such as Yaesu VX-5 and others. Very flexible.
$14.00

36
Telescopic 2 Meter HT Antenna
2 Meter (144-148MHz) Super Antenna is base loaded w/ swivel-fold-over base. BNC connector. 1/4 wave when down-1/2 wave when extended (as pictured). SWR 1 1.8, DB gain 3.8.
$13.00

37
Telescopic 2 Meter HT Antenna
2 Meter (144-148MHz) Super Antenna is base loaded w/BNC connector. 1/4 wave down (as pictured)-5/8 wave when extended. 1 1.4 SWR -3.8 DB gain.
$18.00

38
Silver Teflon PL259 (gold tip)
Silver teflon PL259 with gold tip for RG8 coax (accepts reducer for smaller cable).
$0.90

39
Bakelite PL259
Bakelite center PL259 for RG8 coax (accepts reducer for smaller cable).
$0.80

40
PL259 Reducers/RG-58
Pack of 3 PL259 reducers for RG-58 cable.
$1.00

41
PL259 Reducers/RG-59/RG8X
Pack of 3 PL259 reducers for RG-59 or RG8X (mini 8) cable.
$1.00

42
Silver PL259 Reducers/RG-58
Pack of 2 PL259 silver reducers for RG-58 cable.
$1.00

43
Silver PL259 Reducers/RG-59/RG8X
Pack of 2 PL259 silver reducers for RG-59 or RG8X (mini 8) cable.
$1.00

44
Right Angle UHF
Right angle male UHF to female UHF
$2.50

45
SO239 Chassis Mount
Four hole SO239 (female UHF) chassis mount connector.
$1.00

46
UHF Double Female Barrel
Female to female UHF barrel connector (SO239 to SO239).
$1.25

47
UHF Double Male Barrel
Male to Male UHF barrel connector (PL259 to PL259).
$1.50

48
UHF Double Female-Single Male T

UHF double female (SO239) - single male (PL259) T adaptor.
$3.00

49
UHF Female T
UHF female (SO239) T adaptor.
$3.00

50
UHF Female to 'F' Male
UHF female (SO239) to 'F' male (TV) adaptor. OUT OF STOCK
$2.00

51
UHF Female to 'F' Female
UHF female (SO239) to 'F' female (TV) adaptor.
$2.00

52
UHF Female to 3.5MM Phono
UHF female (SO239) to 3.5MM phono plug.
$2.00

53
UHF Double Female w/Nuts (1
1" long double female UHF (SO239) with 2 nuts. Aka feedthru.
$1.75

54
UHF Double Female w/Nuts (2
2" long double female UHF (SO239) with 2 nuts. Aka feedthru.
$2.75

55
UHF Double Female w/Nuts (4
4" long double female UHF (SO239) with 2 nuts. Aka feedthru.
$4.75

56
UHF Double Female w/Nuts (6
6" long double female UHF (SO239) with 2 nuts. Aka feedthru.
$6.75

57
UHF Female to Motorola Male
UHF female (SO239) to motorola male. This adaptor fits the scanners.
$2.00

58
UHF Female to 'N' Female
UHF female (SO239) to 'N' female adaptor.
$3.00

59
UHF Male to BNC Female (Amphenol)
UHF male (PL259) to BNC female adaptor. Made by Amphenol.
$3.00

60
UHF Female to BNC Male
UHF female (SO239) to BNC male adaptor. Made to adapt HT to mobile
antenna.
$2.00

61
Mini UHF Male to UHF Female
Mini UHF male (sometimes referred to as Motorola) to UHF female
(SO239) adaptor.
$2.50

62
Mini UHF Male to BNC Female
Mini UHF male (sometimes referred to as Motorola) to BNC female
$2.50

63
Double Male BNC
Male to male BNC adaptor.
$3.00

64
Double Male BNC (Silver)
Male to male BNC adaptor. Silver, Mil Spec
$5.00

65
Double Female BNC
Female to female BNC adaptor.
$2.00

66
BNC Female to UHF Female
BNC female to UHF female (SO239) adaptor.
$2.50

67
BNC Male to RCA Male
BNC male to RCA male adaptor.
$2.50

68
BNC Male for RG58 Cable (Screw)
BNC male for RG58 cable. Screw on (compression fit) type connector.
$2.00

69
BNC Male for RG58 Cable (Crimp)

BNC male for RG58 cable. Crimp-on type (mil spec)
$2.00

70
BNC Male to TNC Female
BNC male to TNC female (cellular) adaptor.
$2.50

71
BNC Female to TNC Male
BNC female to TNC male (cellular) adaptor.
$3.00

72
BNC Female to 'N' Male
BNC female to 'N' male adaptor.
$3.00

73
N' Male to UHF Female
N' male to UHF female (SO239) adaptor. (picture coming soon)
$3.00

74
Double Female 'N'
Female to female 'N' barrel adaptor.
$3.00

75
Double Male 'N'
Male to male 'N' adaptor.
$3.00

76
N' Female to UHF Male
N' female to UHF male (PL259) adaptor.
$3.00

77
9913 'N' Connector
Male 'N' connector w/silver body gold pin teflon insulator for 9913
cable.
$3.00

78
SMA Double Male
Male to male SMA adaptor.
$4.00

79
SMA Double Female
Female to female SMA adaptor.
$3.00

80
SMA Male to BNC Male
SMA male to BNC male adaptor.
$4.00

81
SMA Male to BNC Female
SMA male to BNC female adaptor. Most popular for the newer HT's.
$4.00

82
SMA Male to UHF Male
SMA male to UHF male (PL259) adaptor.
$4.00

83
SMA Male to UHF Female
SMA male to UHF female (SO239) adaptor. Adapts your HT to mobile
antenna.
$4.00

84
SMA Male to 'N' Male
SMA male to 'N' male adaptor.
$4.00

85
SMA Female to UHF Female
SMA female to UHF female (SO239) adaptor.
$4.00

86
SMA Female to BNC Female
SMA female to BNC female adaptor.
$4.00

87
SMA Female to BNC Male
SMA female to BNC male adaptor.
$4.00

88
SMA Female to Mini UHF Female
SMA female to mini UHF female adaptor.
$3.00

89
SMA Female to TNC Male
SMA female to TNC male (cellular) mil spec adaptor.
$5.00

90
UHF Male to 'N' Male
UHF male (PL259) to 'N' Male adaptor.

$3.50

91
N' Female Chassis Mount
N' female chassis receptacle. ( 4 hole)
$2.00

92
N' Female Chassis Mount (small)
N' female chassis receptacle. (4 hole) small size.
$2.00

93
UHF Male to 'F' Male
UHF male (PL259) to 'F' male (TV) adaptor.
$2.00

94
BNC Male to 'F' Female
BNC male to 'F' female (TV) adaptor.
$2.50

95
BNC Male to 'F' Male
BNC male to 'F' male (TV) adaptor.
$2.50

96
BNC Female to 'F' Male
BNC female to 'F' male (TV) adaptor.
$2.50

97
BNC Female to RCA Male
BNC female to RCA male adaptor.
$2.50

98
BNC Male 50 Ohm Terminator
BNC male 50 ohm terminator (dummy load).
$2.00

99
BNC Right Angle
BNC male to BNC female right angle adaptor.
$2.00

100
BNC Female T
BNC female T adaptor.
$2.50

101
BNC Double Female Single Male T

BNC double female single BNC male T adaptor.
$3.00

102
BNC Male for RG8 Cable
BNC male connector for RG8 cable. Mil spec, packaged.
$3.00

103
TNC Male to 'N' Male
TNC male to 'N' male, silver, mil spec adaptor.
$5.00

104
TNC Double Female Chassis
Double female TNC chassis, mil spec adaptor.
$3.00

105
Female Mic Plug 2 Pin
2 pin metal microphone plug, female.
$2.00

106
Female Mic Plug 4 Pin
4 pin metal microphone plug, female.
$2.00

107
Female Mic Plug 5 Pin
5 pin metal microphone plug, female.
$2.00

108
Female Mic Plug 6 Pin
6 pin metal microphone plug, female.
$2.00

109
Female Mic Plug 7 Pin
7 pin metal microphone plug, female.
$2.00

110
Female Mic Plug 8 Pin
8 pin metal microphone plug, female.
$2.50

111
Male Panel Jack 2 Pin
2 pin metal microphone panel jack, male.
$2.00

112
Male Panel Jack 3 Pin
3 pin metal microphone panel jack, male.
$2.00

113
Male Panel Jack 4 Pin
4 pin metal microphone panel jack, male.
$2.00

114
Male Panel Jack 5 Pin
5 pin metal microphone panel jack, male.
$2.00

115
Male Panel Jack 6 Pin
6 pin metal microphone panel jack, male.
$2.00

116
Male Panel Jack 7 Pin
7 pin metal microphone panel jack, male.
$2.00

117
Male Panel Jack 8 Pin
8 pin metal microphone panel jack, male.
$2.50

118
Super Star Mini Base Mic
Amplified mini base mic wired for 4 pin Cobra CB or equivalent.
$20.00

119
Trunk Lip Mount
Plastic trunk lip mount for 3/8"x 24 thread antenna w/12' RG58
cable-PL259 connector.
$12.00

120
Power Cord/Newer Rigs
Power cord for newer style radios. Double fused-w/both T type
connectors. TEMPORARILY OUT OF STOCK!
$10.00

121
Power Cord/Older Rigs
Power cord for older style radios. Double fused. Two connectors as
shown included.
$15.00

122
Lightning Arrestor
UHF male (PL259) to UHF female (SO239) lightning arrestor w/grounding lug. Allows protection from lightning strikes from radio to antenna.
$3.50

123
T Connectors for Power Cords
Plastic T connectors for power cords for the newer rigs, pins included.
$1.50

124
2 Position Coaxial Switch
2 output coaxial switch with SO239 connections. Frequency up to 600MHz with a power rating of 1000 watts. One position grounds out the other. Heavy duty case.
$16.00

125
3 Position Coaxial Switch
3 output coaxial switch with SO239 connections. Rotary switch type w/off position. Power rating of 1000 watts.
$10.00

126
3" Double Female UHF
3" long double female UHF (SO239) with 2 nuts. Aka feedthru.
$3.75

127
8" Double Female UHF
8" long double female UHF (SO239) with 2 nuts. Aka feedthru.
$8.00

128
10" Double Female UHF
10" long double female UHF (SO239 with 2 nuts. Aka feedthru.
$9.00

129
3' RG8X Jumper w/PL259's
3' RG8X jumper cable with 2 soldered PL259's. OEM/USA, 95% braid, 50 ohm, very high quality.
$5.00

130
6' RG8X Jumper w/PL259's
6' RG8X jumper cable with 2 soldered PL259's. OEM/USA, 95% braid, 50 ohm, very high quality.
$6.00

131
9' RG8X Jumper w/PL259's

9' RG8X jumper cable with 2 soldered PL259's. OEM/USA, 95% braid, 50 ohm, very high quality.
$7.00

132
Extreme Cold Weather Mask..NEW
New Mil Surplus extreme cold weather mask with 2 mouth/nose covers-neck cover. Instructions included.
$3.00

133
All Brass Padlock..Mil Surplus
New in the box Mil Surplus all brass padlock with 2 keys. Made by American Lock, measures 2 1/4" x 1 1/2". All keyed separately.
$5.00

134
Iridite Plated Steel Padlock..Mil Surplus
New in the box Mil Surplus heavy duty rust resistant iridite plated steel padlock with 2 keys. Made by American Lock, measures 3 1/8" x 1 3/4". All keyed separately.
$6.00

135
Phone Block
New mil surplus. Block measures 10" x 2" and has 200 tabs. Part# 101-931-269.
$10.00

136
Tin Plated Copper Ground Strap
Grounding strap measures 9" x 1" with 1/4" hole in attached lugs on each end. New mil surplus.
$2.00

138
2 Extra Large Nuts
Pack of 2 extra large nuts fit the SO239 feedthru connectors.
$1.50

139
5' RG58 Jumper w/BNC's
Mil Surplus 5' RG58 jumper cables with 2 silver BNC connectors. 50 ohm, high quality, gov't. packaging.
$5.00

140
Mini Speaker/Mic fits Yaesu
Mini speaker/microphone fits Yaesu radios/HT's (single pin). Push to talk with 3' cord. Made by Workman.
$10.00

141
Mini Speaker/Mic fits Icom
Mini speaker/microphone fits Icom radios/HT's. Push to talk with 3' cord. Made by Workman.
$10.00

142
Mini Speaker/Mic fits Kenwood
Mini speaker/microphone fits Kenwood radios/HT's. Push to talk with 3' cord. Made by Workman.
$10.00

143
Lapelle Speaker/Mic fits Yaesu
Medium sized (2 1/2" x 1 1/4") clip-on speaker/microphone fits Yaesu radios/HT's (single pin). Push to talk with coiled cord. Made by Workman.
$14.00

144
Lapelle Speaker/Mic fits Icom
Medium sized (2 1/2" x 1 1/4") clip-on speaker/microphone fits Icom radios/HT's. Push to talk with coiled cord. Made by Workman.
$14.00

145
Lapelle Speaker/Mic fits Kenwood
Medium sized (2 1/2" x 1 1/4") clip-on speaker/microphone fits Kenwood radios/HT's. Push to talk with coiled cord. Made by Workman.
$14.00

146
Lg. Lapelle Speaker/Mic fits Yaesu
Large sized (3" x 2") clip-on speaker/microphone fits Yaesu radios/HT's (single pin). Push to talk with coiled cord-earphone plug-in. Made by Workman.
$16.00

147
Lg. Lapelle Speaker/Mic fits Icom
Large sized (3" x 2") clip-on speaker/microphone fits Icom radios/HT's. Push to talk with coiled cord-earphone plug-in. Made by Workman.
$16.00

148
Lg. Lapelle Speaker/Mic fits Kenwood
Large sized (3" x 2") clip-on speaker/microphone fits Kenwood radios/HT's. Push to talk with coiled cord-earphone plug-in. Made by Workman.
$16.00

149
Pack of 10 Silver Teflon PL259s

***SPECIAL*** Pack of 10 Silver teflon PL259 with gold tip for RG8 coax (accepts reducer for smaller cable).
$8.00

150
9 ft. RG8X Jumper w/PL259
**SPECIAL**$1.00 off 9ft. RG8X jumper cable w/PL259 connector. American made w/95% braid. Reg. $7.00, now $6.00.
$6.00

151
'Hershey Kiss' 2M Antenna
Rare Earth magnetic mount 1/4 wave 2M (144 to 148MHz) with 9' of RG174 cable with a BNC connector, ready for hook-up to your HT. Unity gain and will handle up to 50 Watts. Magnetic base resembles a Hershey Kiss but is very strong. Very inconspicuous and great for traveling.

## 15. ALINCO Group

Newsgroup: rec.radio.amateur.equipment

Hi guys

Just a brief note to say there is a group in Yahoo to support all Alinco products. Hope those that use them will give a thought to joining in :-)

http://groups.yahoo.com/group/alinco_all

Take care out there, have a great 2004.

Dave G3VFP

> phases? Why not plain ole hot & neutral?

---

For larger horsepower motors, Three Phases means that they will
start with no external mechanical assistance.

For distribution many economies can be had with 3 Phases.

(Expensive) Alternators could be made with more phases and so could
the systems to deliver the power but the problems and costs would far
outweigh the benefits.

Rob.

|> 277/480 or 347/600 depending on what your utility can provide.
|
| I think you could use a standard 3 phase core, and lots of secondary
| windings. From 3 phase to 2 phase 90 degrees shift can be done (and the
| reverse as well).
|
| A winding on a certain phase in series with a few turns on the next
| phase will have a resulting phase that is a bit in the direction of that
| next phase.
|
| As you make separate turns per output phase it is easy enough to ajust
| voltages to be approximately equal.

Having noted that utility distribution 3 phase transformers have a core
that is really one big core for all three (though spatially separated a
bit), I have been wondering what would happen in the magnetic field if
one were to take a toroid core, put the three phase primaries on it at
120 degree positions covering only 1/3 of the toroid each, and then have
a "rolling secondary" that slides around the toroid (mechanical support
for the mass would then be done with wheels holding up the 2/3 not being
used for the secondary).

To what purpose? Capacitors are a lot cheaper and smaller than transformers.

Motors are happy at three phases. Rectifier banks benefit from having more, up to a point; for a rectifier, all phase voltages need to be very nearly equal. Ripple is very small for a 12-phase or so rectifier bank. With more phases, ripple amplitude decreases and frequency increases, so a series inductor followed by a bit of capacitance becomes an efficient way to filter ripple, if it matters. A zener bank would waste a huge amount of power and would do nasty things if the line voltage went up just a bit.

We did a 3-phase powered MRI gradient amplifier a while back. It puts out +-100 amp pulses at up to 180 volts peak. The power transformer weighs about 90 pounds, just about the same as Tammy, my smallest production employee. We gave her an overhead electric winch so she could load the transformers into the chassis. With fullwave rectification, the ripple frequency is 360 Hz, so just a modest bunch of capacitors filters things nicely.

John

Low distortion analog sinewave oscillators need a gain servo loop, and
that can have huge settling times at low frequencies. With a 2-phase
oscillator, you could feed back on sin^2 + cos^2 and have basicly zero
delay. Now all we need are good multipliers!

I'm sure I could find cases where that is true. However, if you try to
make a 5 or 10HP inverter for motor control operate from single phase
power you will quickly find that the capacitors both represent a major
(probaby the largest single) portion of the materials cost and are the
determining factor in the life of the product.

contact cleaner is usually sold as a can of aerosol-spray.

I seek it in swab/wipe form, preferably in unit-pack. Lots of alcohol-water pads out there, I don't want to put water on my equipment. Anyway, it takes the real solvents (eg, hexane) to get the bad crap off. I'd settle for acetone swabs, I suppose.

Who sells the stuff? URLs, snail-mail contact info?

The first thing you do when you're making an inverter-style motor
control is turn the incoming AC to DC with a sufficiently low ripple.

1. Don't be a lurker topic-droid.

2. A motor control inverter *needs* a good, polyphase-fed DC power
supply.

Capacitors cause peak currents. And if you need the transformer anyway
it doesn't cost a lot to add more output phases.

Thomas

In a beefy single-phase supply, the caps can often cost more that the
transformer. Polyphase, the transformer costs about the same as
single-phase, but you need far less capacitance.

John

## 37. Kenwood TM-231A help needed

Newsgroup: rec.radio.amateur.equipment

I have a Kenwood TM-231A that I am trying to modify the frequency range. When I got it the radio was able to receive from low 2-meter frequencies to 160mhz plus but the transmit was only to about 148mhz. When I tried the installation of the D209 diode per the modifications instructions and service manual I lost the upper receive frequencies and only had the 2 meter frequencies. Is there something I am missing? Is there some other component that needs to be added or removed? Does the CPU have to be reset in any way.

Also I do not have the TSU-6 tone board installed. Will the radio still produce encode tones and if so, how do I change tones? Please respond by email. Thanks, 73's and Happy New Year to all. Don smith KB6GQA

OK, take the rolling secondary back off. Just have 3 primaries covering
1/6 of the toroid each, and 3 secondaries covering the remaining gaps
between those secondaries.

Hi Alan,

http://www.caig.com

Caig labs makes Deoxit brand contact cleaner in spray, wipe and swabs.
Little expensive but you use microscopic drops at a time,
also works great on those scratchy pots !

Yes. Use a phasor diagram.

See if you can find graph paper with polar and rectangular
coordinates, and draw directed segments [0,0][1,0] and [0,0]
[-1,0]. They're clearly inverses. Now, transform them both
to polar coordinates. Now it's vector 1.0 < 0deg and 1.0 <
180deg.

I think thinking of it as just going up and down is one way,
and thinking of it as going around circles is another.

And just another grain of sand - isn't there something about
reactance having to be involved?

Cheers!
Rich

Still blows up. The primary phases are fighting each other. A
three-phase torroidal transformer needs three cores.

John

Glad you got it working. Turned out my guess on the problem was wrong,
but what the heck. Overall, I think the Astrons are pretty ruggedly
built supplies. I have an VS50M on my test bench and an RS-35M I used
to use on my station (went to a switcher after I took a lightning hit).
I repaired the RS35M and still have it.

No, it can't work. Take a careful look at the magnet flux
path in any ordinary 3-phase transformer. They're all
in parallel, if you think of the top bar as one pole
of a bar magnet that's split into 3 things, and the
bar at the other end is the other pole. So all the
fields oppose, and energy gets to go to the secondary.
With your toroid, the magnetic paths are in series,
which is pretty much like a short circuit, so, as
John Larkin noted, "It would blow up instantly."

Cheers!
Rich

I don't have a phasor diagram in my tool box, this is bit of theory not a
test.

Overlie the two and they cover one another, it's simply two ways to say the
same thing.

Try the "Battery Lady"; I think she's out of California... I saw her recommended somewhere else and ordered a new battery pack for my old Yaesu HT. Its a small "Mom & Pop" operation, but the prices were good and I was satisfied with the product. I think the $50 estimated above was a little pessimistic. I got my new battery pack for ~$35, but I was able to salvage the old battery pack case, so that saved me some money.

I read in sci.engr.electrical.compliance that Rich Grise
<spamdump@nowhere.net> wrote (in <254Jb.36719$E17.27130@nwrddc02.gnilink
.net>) about 'why 3-phase power?', on Fri, 2 Jan 2004:
>No, it can't work. Take a careful look at the magnet flux
>path in any ordinary 3-phase transformer. They're all
>in parallel, if you think of the top bar as one pole

>fields oppose, and energy gets to go to the secondary.
>With your toroid, the magnetic paths are in series,
>which is pretty much like a short circuit, so, as
>John Larkin noted, "It would blow up instantly."

It would be nice to have a more scientific explanation. The rot set in
with 'It would blow up instantly' - no explanation of what would cause
an uncontrolled energy release.

The point is that with the three voltage phasors at 120 degrees, it can
be seen by resolving the resulting inductions into orthogonal components
that both components sum to zero. No induction is created in the core,
so there is no transformer action, and the input current is limited only
by the winding resistances.

Two phases at 90 degrees would be a different story, but maybe of no
practical use.

www.batteriesamerica.com

Don't buy the complete battery....just get the cell packs. Any ham should be able to swap out the cells. The FT23 is the same as the FT470 for battery packs...easy to do. I did many packs for my old -470.

That said, someone had new batts on ebay for around $30. Worth checking out, even if you dislike that service.

Cheers;
A

yea, the 444/25, 444/25A are on ebay from time to time, usually in beat up condition..
Show me another 444/25B and I'll buy it for you.

## 61. FS: Main tuning encoder for IC-735 transceiver (NEW!)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-02 16:00:29 UTC
From: Craig Johnson <cbjohns@cbjohns.com>
Message-ID: <xAgJb.30876$I07.77043@attbi_s53>
Source record: 24363

For Sale: ICOM IC-735 Main Tuning Optical Encoder (NEW!)

This replacement part was purchased from ICOM about a year
ago but never used. It is now a rare item because they are
no longer available from ICOM. It is in perfect condition.

This is a beautiful part with an adjustable tension control.
It could easily be used in other applications as well.

Pictures:

I heard opening up the 706 series for use in the new 60M band is VERY rough on the amplifier section - of which I heard a few stories of the amp being smoked like fish.

Has anyone else heard of this problem with the 60M... or better yet, experienced this problem?

## 65. Re: Create Log-Periodic 5130-2N?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-02 18:16:29 UTC
From: davearea51@aol.com
Message-ID: <20040102131629.15885.00001241@mb-m21.aol.com>
Source record: 24367

I have had the Create LP that is rated for service from 50 MHz through 1.3 GHz for about 15 or so years. I have also used one to make relative measurements on a "parking lot Open Air Test Site" using substitution for radiated emissions. The antenna does not present the claimed gain numbers, more like 3 to 5 dBi. It is certainly "designed" with the ham bands in mind as the lowest SWR points over its range are all within the ham bands between 50 MHz and 1.3 GHz (including 222). The feed structure is too large for good performance much above 700 to 800 MHz and the taper is too aggressive for more gain which would result in a longer boom. However, I use it for general monitoring of VHF/UHF conditions (meteor scatter, tropo conditions, and other "things") with the Icom R 7000/preamp. It's excellent for that. In addition, it IS directional and has some gain which a (vertically polarized) discone does not. It's just a good overall workhorse antenna, but don't expect much more than 5 dBi gain, anywhere in its operating range.

Dave - W0LEV

You can also reverse the rotation by swapping two of the phases. If one phase is blown you can start it by giving it a spin in the right direction, 'without' getting your hand caught. I had to replace one at work once on a rooftop air conditioner, even though I was an electronics engineer I was the only one who volunteered. It was only about 130 on the black tar roof. I came down a hero to the assemblers who were under it but had to leave and take a shower after that one, seems no one would get near me for some reason. One leg may be possible if there is a center return wire but I didn't try it.

Can anyone identify the 4-conductor, 2.5mm jack shown at:
http://www.alancomputech.com/mc-em1.html

The shaft looks like it might be a standard 2.5mm stereo jack. The
collar is something I haven't seen before.

It is on the NEC MobilePro 780 handheld PC I use to control my TNC's.
It is for an earphone-mic, as is shown in the picture.

I *think* this is a myth. I have been running 4 and 5 Megs for years with a
706 with no prob. I run CAP
on 4 MHZ and 5 on the Fema freqs and have never
"let the smoke out".

It sounds like the SWR protection is keeping it shut down. If your jumper cable and dummy load are all right then the problem must be between the final amp and the RF connector. I have seen this problem on the rigs with the connector on short pig tail from rig to save space. The center conductor breaks from the flexing. if the connector is on the rig then check the wire from the circuit board to plug. Last thought is a shorted Cap in the final matching section. Or as you mentioned a faulty relay.

73 and good luck.
Don

## 77. Hint on replacement for Yaesu panel lamps

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-03 03:23:50 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <v7qcnQtOJ7egq2uiUSdV9g@ptd.net>
Source record: 24379

My Yaesu FT-4700RH had 4 "grain of wheat" style lamps
to provide panel/display backlighting. 3 of them had burned
out. These lamps are accessible from the back of the removable
control head. They are covered with pliable orange plastic covers
and inserted through holes in the PCB from the back side, with the
two leads bent over and soldered to pads on the back side of
the PCB, so they are easy to remove. (Save the orange plastic
covers to use on the replacement bulbs.)

To my pleasant surprise, I found that RadioShack's
SKU 272-1092 (pkg of 2) were a physical fit.

The lamp driver circuit in the FT-4700RH runs from 9V
controlled by a PNP driver that is driven by a circuit that
allows "bright" and "dim" (controlled by a front panel
switch labeled "dim").

The RadioShack "micro lamps" are labeled as 12V 60 mA,
and are not *quite* as bright as the original Yaesu part, but
they are (IMHO) adequately bright, and should last a long
time with the derating resulting from the 9V supply and the
fact that there is a 4.7 Ohm resistor in series with each lamp.

Cost - about $6.00 for four packages of two lamps (I bought
spares).

I hope that someone finds this useful - the same lamps *may*
have been used by Yaesu in other models of similar vintage.

73,
Carl - wk3c

|
| Still blows up. The primary phases are fighting each other. A
| three-phase torroidal transformer needs three cores.

And how is that different when you take an iron core and wrap 3 coils around
it like:

_______________________
| |
| _____ _____ |
| | | | | |
/=======\ /=======\ /=======\
|=======| |=======| |=======|
|=======| |=======| |=======|
|=Phase=| |=Phase=| |=Phase=|
|===A===| |===B===| |===C===|
|=======| |=======| |=======|
|=======| |=======| |=======|
\=======/ \=======/ \=======/
| |_____| |_____| |
| |
```

|_____|

Certainly it is different in that they are not in "magentic series". Is that what is relevant?

In sci.electronics.basics Rich Grise <spamdump@nowhere.net> wrote:

| No, it can't work. Take a careful look at the magnet flux
| path in any ordinary 3-phase transformer. They're all
| in parallel, if you think of the top bar as one pole
| of a bar magnet that's split into 3 things, and the
| bar at the other end is the other pole. So all the
| fields oppose, and energy gets to go to the secondary.
| With your toroid, the magnetic paths are in series,
| which is pretty much like a short circuit, so, as
| John Larkin noted, "It would blow up instantly."

Is there a way to mix phases in the magnetic domain much like they are
mixed in the electrical domain by connecting leg to leg in a 480Y/277
secondary to get the 480 volts which is 30 degrees different in phase
then the 2 277 volt secondary windings?

What I was trying to come up with was something that lets you adjust
the phase with a big knob much like a variac is used to adjust voltage.

| Cheers!

I am not sure if a 3 phase motor would even rotate unloaded on 2
phases but it certainly would not develop a usable amount of
horsepower. I would suspect that running on 1 phase would be out of
the question.

I do know that if a loaded 3 phase motor blows a fuse it will almost
always blow a fuse in one of the other lines due to an overload. Due
to the way the control power for the motor is connected the starter
will then open the circuit if it did not already do so when the first
fuse failed.

Also, there is a number of 1.57 being bandied about in this thread
for the relative horse power of a 3 phase versus single motor for a
given current. This number should be 1.73 (The square root of 3.

Rob.

I read in sci.engr.electrical.compliance that phil-news-nospam@ipal.net
wrote (in <bt5hu901hcv@enews4.newsguy.com>) about 'why 3-phase power?',
on Sat, 3 Jan 2004:

>Certainly it is different in that they are not in "magentic series". Is that
>what is relevant?

The inductions in B and C add up to minus(the induction in A) so there
is induction in the core.

How would you hook up a 3-phase motor to run on 2 phases?

How would you hook up a 3 phase motor to run on one phase?

I don't care whether they work or not, I just want to see the wiring
diagram.

Thanks in advance.

Alan, from an industrial maintenance and engineering perspective, 3
phase motors can be reversed quite easily by switching any 2 of the 3
leads. This elliminates double stocking of single phase motors due to
them being directionally oriented in their rotation. Three phase
equipment is also less "noisy", electrically speaking, due to them not
having the zero voltage cross-over inherent in a single phase supply.

Happy New Year

A 3-phase motor has 3 wires. If you break one wire, it's running on
single phase, not two. Break two wires and it tends to just sit there.

>How would you hook up a 3 phase motor to run on one phase?
>
>I don't care whether they work or not, I just want to see the wiring

Single phase applied to two of the three wires. It works better with
capacitors to the third (otherwise unconnected) wire. The motor won't
start like this, you either need to give it a spin or use another
(starting) capacitor and some switching.

Best regards,

Aww, you sprung my trap!

The previous poster was expostulating on running the motor on 3, 2 and 1 phase. I was waiting for him to show me the difference between the 2 phase and single phase connections!

Same basic concept as phase rotation in a 3 phase system. You and I think there are only two, but there are really many; ABC, BAC, CBA, ACB etc.etc.

(Facetious mode turned OFF)

I spent many years in an old manufacturing city in the Northeast, where we had, in common use on a daily basis, AC (25 and 60 Hz), DC, every possible permutation of 3 phase, 2 phase 3,4 and 5 wire, and everything in between. My absolute favorite was the 6 phase double delta. Picture a straight 220 (YES, 220, not 240) delta connection. Now, center tap all the transformers, and these midpoints give you another delta at 110 for the lighting load. Of course, the whole thing is ungrounded. Yes, all the light switches in the building were 2 pole. Yes, the small motors were 110 volt 3 phase. This system gives you 2 three-phase voltages out of one set of transformers, The power factor transforms at unity, unlike many connections. Only thing is, it is very had to protect the transformers unless you use 6 primary fuses.

Years ago, maintenance electricians had to be aware of a lot of varied systems. Today, life is a whole lot simpler.

Thanks in advance.

Goniometer. A transformer with two (in quadrature) primary windings and a
rotating core. (I see no reason why a 3 phase version isn't possible, too).

Synchros and Selsyns, too.

Mark Zenier mzenier@eskimo.com Washington State resident

Hi guys,

If you are interested in a software which has more modes than you know what to do with, including Packet by the way, try out MixW by UT2UZ is really is excellent.

The latest version 2.10 is on my web download page, and the help group is at Yahoo.

www.g3vfp.org/download.html

http://groups.yahoo.com/mixw

Lots of other softwares for radio use on my download page too.

Cheers,

Dave G3VFP.

rec.radio.amateur.equipment,sci.engr.electrical.compliance,sci.engr.manufacturing,sci.electronics.design,sci.electronics.basics

The most straightforward answer is that 3 phases provides the best compromise between the benefits of polyphase transmission and the simplicity of single phase transmission.

2 phase systems were indeed built in 3, 4 and 5 wire versions. The three wire version uses the fewest wires, but it is not symmetrical, one of the conductors must be larger. The 4 and 5 wire systems permit use of identical wire sizes, but need 4 or 5 wires.

The 3 phase system needs three wires which may be equally sized, which is an obvious benefit over any 2 phase system. Systems with more than three phases may be built, but for the simple transmission of power they have no advantage over three phase, and the disadvantage of needing more wires.

Single phase systems present difficulties as far as motors are concerned. Single phase motors are not inherently self-starting, they all require some additional mechanism which has costs either in complexity or efficiency.

There are additional issues, but the big benefit is in going from single phase to polyphase. All the polyphase systems also provide the benefit of requiring less copper per kW transmitted.

Why do we not use 3 phase in US residences? Because for the small electrical loads served, the cost and complexity of having the extra wire outweighs the benefits.

The US system is a carefully-considered enginnering compromise.

The customer requirements are for the delivery of about 10 kW and a
voltage that is as non-hazardous as reasonably possible.

The solution, of a 120-0-120 system, appears to me to be quite clever.

In Europe, we have 3-phase 230 V supplies (if necessary) to residential
customers on the Continent, but in UK, residential loads normally have a
single-phase 230 V supply. This is not as safe as a 120 V supply, but is
more efficient.

Wow. If it was delta, then 110 3-phase would require 6 wires (or five
if you cheat and share one corner) so the 110 3-phase motor would need
three isolated windings and most likely a 6-pole on/off switch. Was it
really like that? Might it have been wired wye with one central
common/neutral? That seems more logical, but then maybe it wasn't very
logical.

>Years ago, maintenance electricians had to be aware of a lot of varied

The thing that always amazes me is that buildings are wired in the
most bizarre ways, and no documentation is left behind. If you call in
an electrician, they figure it out somehow, kluge it some more, and
leave.

John

Yes indeed.

Many of its critics fail to understand that the "center-tapped" system we
use in the US was developed in the early 1900s as a way to provide the
benefits of 230 volts to residences which had already been wired for 115
while maintaining perfect backward compatibility. The lower voltage to
ground may or may not be relevant as far as safety goes.

Nope. Draw a picture of a Delta, center-tap each winding, and the three center taps form another delta at half the voltage. Used a perfectly standard (for 1922) 3 phase, 3 wire, 110v, 25Hz motor.

The 110 volt service made no connection to the corners of the 220 delta. The 110 delta was fed only from the center taps.

Oh, yeah, OK. New Orleans is mostly below sea level, and the
Mississippi runs along most of it and peaks way above in the spring.
Up to fairly recently, New Orleans was drained by ancient pumps with
ancient switchgear, running on 25 Hz, and all the generators that made
the 25 Hz were (of course) in the city, below sea level too.

John

Clever, clever, delta, New Orleans.....

And who said there's no wit here!

Yeah, 25 Hz has kind of pooped out recently. It is still generated on the Canadian side of Niagara Falls, but it is all converted to 60.

Across the river in Buffalo, the utility still provides 25 Hz to about 50 customers, but they have announced its termination as of 2007. There are a few isolated paper mills that make their own, I believe that Con Edison makes a little, and there is one isolated pocket in Iowa, but that's all I know of that's left.

I remember when 60, 50 and 25 cycle motors were all stocked items!

Thanks in advance.

Naturally: 25 Hz is an unusually LOW frequency.

>resistor listed on this diagram?

I'd suggest 2.2k ohms for the PTT current-limiting resistor (it's what's used in their speakermikes), and a .1 uF ceramic or filmcap for the DC-blocking capacitor.

A word of caution re building this specific sort of cable yourself. I've found out (the hard way) that the 4-contact 3.5 mm plug sold by Mouser does _not_ work well with the Yaesu VX-5R. The Mouser plug has a fairly broad metal "shoulder" at the base, and this hits the outer (higher) rim of the rubber sealing ring around the VX-5's speakermike jack and prevents the plug from being inserted to its full depth. As a result, the plug doesn't make good contact with the jack and (in my setup at least) doesn't transmit properly.

The plugs that Yaesu (and other manufacturers) use, have a narrower metal shoulder at the base, which fits nicely into the outer rim of the sealing ring and seats down nicely against the inner rim. Unfortunately I haven't found a commercial retail source for these narrow-shoulder 4-contact plugs. The only source I can suggest is to buy a VX-5/VX-1 cloning cable and cut it in half.

I built one of the Mouser plugs into a TinyTrak adapter cable, and wasn't able to get the VX-5 to key up properly. I tore apart the cable, rewired it with two separate 2.5mm/3.5mm plugs, and bought the Yaesu VX5-to-TNC adapter. This combination works quite well.

I don't know if the VX-1 has the same "narrow shoulder" plug/socket problem as the VX-5 does, but I'd suggest checking it before you go to a lot of effort wiring up the cable.

Carl,

Those same lamps will work in most Yaesu rotator controllers, though in that case you need to add a 33 ohm resistor in series. The controllers usually supply ~14 volts, and the resistor puts them exactly on spec. Most people use the new LEDs with appropriate resistor though. Runs cooler, and lasts ~forever.

As promised, here's my "no match" update report.
I checked all coax connections and, even though it's not conclusive,
could see no corrosion, so I started replacing the various lengths of
coax between one piece of equipment and another.
To make it short and sweet, if I remove my station monitor (SM-220)
from the antenna circuit my 940 has no problem finding a "match."
Apparently there is some condition within the station monitor that is
causing the problem. It doesn't matter if I have the monitor on or off.
it won't match above 28.4.I have no idea what this condition could be at
this time, but as long as it's not my rig it's no biggy. I can check out
the SM-220 when time permits. I don't use it too often anyway.
Once again I find myself relearning the lesson of "always check the
simple things first."
Of course, this raises the question to me of why does it match with
the 20 meter dipole and not the 10 meter dipole, but there's probably a
simple solution there, too.
I extend my thanks to all of my brother hams who made the effort and
took the time to offer their input and help me find the solution to my
"match" problem.

Before someone points out the obvious, yes, I do realized that there
is a difference in frequency involved here, and, yes, I understand that
the problem is a result of attempting to "match" above 28.4.

## 115. Help with Yaesu mic's

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-04 00:02:18 UTC
From: Doc Holiday <K4ffa@comcast.net>
Message-ID: <MqidndCfBliuxWqiRVn-hQ@comcast.com>
Source record: 24317

I have 2 MH-1 (new version) Yaesu hand mics and a MD-200 desk mic that will key my MKV, but they will pass audio and work on vox. I have an older MH-1 that works perfectly, keys the radio and passes audio. I have swapped the cords on all the new versions and the MD-200.

Can anyone help trouble shoot the problems? I'm at a loss of what else to do. I'm still confused why the older version works and the others don't.

The motor I replaced was on an air conditioning blower and would rotate
if given a boost before turning on the power, but as you said not with
enough power. It just would not start without the third phase. The fix
was to replace a 3/4 horse motor with a 1 horse motor in the same NEMA
frame size. It was a 480 volt unit so we did not play much with it and

just tossed it. Seems us engineer types prefer 5 volt stuff.

I agree with Mohd Nazry Bin Mustapa that there is no membership requirement implied just to share information. If there were I would not be here since I am not a Ham, just an engineer who has had FCC certification for repair of radio equipment. 1st class + radar for marine work. I am however a very enthusiastic SWL buff and have been using only American equipment since the 50s'. I like to pick up some tips when relevant and may even say something once in a while, not often, but this discrimination thing has to go.
Radio is for fun, not ego.

|
| A 3-phase motor has 3 wires. If you break one wire, it's running on
| single phase, not two. Break two wires and it tends to just sit there.

2 phase would not be the result of a failure of power source, but it could
happen if the internal windings/circuit on one of the phases opened up.
I've never seen that happen but I can't say it's impossible.

This is just a webcast audio service. The software "scanner" is simply the client software that picks up the audio stream they transmit. You are limited to whatever services they choose to carry and stream to you.

I do remember in the 1960's seeing a catalog of window mount air conditioners that included a 3 phase power option on a few larger models. And these were home style units. My grandfather did have 3 phase power to his home for the purpose of feeding motors in his wood shop (but at the time I never found out which of the machines actually used it; several had the rotating/locking plug style, but NEMA defines them for both 1 phase and 3 phase services).

I ran across a web page a couple weeks ago for an electric power coop that listed the categories of service available. For residence, they would provide 3 phase "where available" (which I interpret to mean that if there are just 1 phase wires running by, it's not available unless you want to spring for the costs of bringing new primary service in) if there was a need (and they cited motors over 5 HP as an example).

|
|>Why do we not use 3 phase in US residences? Because for the small electrical
|>loads served, the cost and complexity of having the extra wire outweighs the
|>benefits.
|
| The US system is a carefully-considered enginnering compromise.
|
| The customer requirements are for the delivery of about 10 kW and a
| voltage that is as non-hazardous as reasonably possible.
|
| The solution, of a 120-0-120 system, appears to me to be quite clever.
|
| In Europe, we have 3-phase 230 V supplies (if necessary) to residential
| customers on the Continent, but in UK, residential loads normally have a
| single-phase 230 V supply. This is not as safe as a 120 V supply, but is
| more efficient.

Is that 230 V hot-to-neutral with 400 V hot-to-hot?

Personally, I'd rather have a higher voltage, up to not more than 600 volts.
I guess it just depends on your perspective. But clearly many applicances
will have voltage issues with respect to safety. Some of the internal wiring
in cheap power supplies and some wall warts clearly look to me like 120 volts
is too much for them. Maybe the US needs 3 phase 120Y/69 for them :-)

## 126. Re: Mod Wanted: ICOM 706 on 11 meters??

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-04 08:29:14 UTC
From: Paul Jordan <pauljordan@gci.net>
Message-ID: <vvfjm45minssa9@corp.supernews.com>
Source record: 24328

Why don't you try reading my post again instead of replying in the negative sense.. I said I DO NOT want to mount another radio and a CB antenna on my truck. With the 706, I already have a 10-80 meter HF antenna as well as a 2 meter antenna.. I'll be putting my scanner back in and that'll be another antenna and radio.. Newer trucks just don't have the room anymore for radios hangin off the dash.. Thank god for detachable/remote mount faceplates..

Thanks to all the rest of the decent amateurs that answered in the positive sense. Your advice is well taken..

# 128. Re: NOTICE TO ALL NEWS GROUP MEMBER

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-04 11:12:40 UTC
From: Jim Chumbley <jamesfchumbley@att.net>
Message-ID: <lySJb.278526$Ec1.9565762@bgtnsc05-news.ops.worldnet.att.net>
Source record: 24330

This is my only concern:

These are the questions being raised by Mr. Mustapa:
a.) Can you use a linear amplifier on transmit or receive or both?
b.) Can someone help [me] on the software (ADMS-2H) for "programming"
the Yaesu FT-8900R?

These are not the questions of an experienced ham or of someone in the process of learning technology so as to become a new ham. I have been an Elmer for 30 years and have never heard thoughts like these being voiced. In private emails Mr. Mustapa sent to me--to which I did not reply--he thinks that my concern is about technical questions and conversations being carried on by someone who is not a ham. This is absolutely not the case. Before any of us was a ham we learned from someone, probably a ham. That's part of the purpose, I hope, of this newsgroup. On that we can all agree.

No, my concern is that if questions like these are being asked by a non-ham, what is his purpose in learning answers to technical questions like these.

I am afraid. I am very afraid.

I have been so ever since 9/11/2001, the date the World Trade Center was destroyed in New York City.

These questions sound to me exactly like those that would be asked by someone in Al Qaeda who is trying to develop just enough communications expertise to learn to use amateur radio equipment like linear amplifiers and new VHF/UHF transceivers like the Yaesu FT-8900R. With radios like the beautiful, easy-to-get Yaesu FT-8900R, Al Qaeda can build a complete, clandestine, world-wide communications system by using our small transceivers to communicate with each other through our amateur radio satellites.

Is it paranoid to be this concerned as I am? If the pilot training schools had refused to train the pilot-trainees who learned just enough to fly the big Boeings into the World Trade Center, they just might have never learned how to do it. If we refuse to offer assistance, information, or programming help to someone who admits that he is not a ham and does not intend to become one, we just might prevent one person or more from setting up a new Al Qaeda communications network and becoming the Al Qaeda Director of World-wide Communications.

Afraid? You bet I'm afraid. I hope you are also.

I have no idea what Mr. Mustapa's intentions are. I do not even know which continent he lives on. I accuse him of nothing. If his real intentions are to learn CW at 5 WPM plus theory and regulations for a General-class

licensee, I would be very glad to help him myself in any way I can. But from the tone of the questions asked, I am certain that I will never help to answer those questions. I urge all other hams to follow this lead and not share your technical expertise with people who bring great attention to themselves by the very strangeness of the questions they ask. Ask yourself whether the country might be harmed by helping people who ask questions like these. Your answer at a minimum must be yes and a realization that there is at least a real possibility that if you help people asking strange questions, our country could be rendered less safe. And there is a real possibility that if you help someone who asks questions like these, you could be aiding in the future murder of thousands more people. We just don't know.

Thank you for reading my response. I do not attend to write even one more. I have said enough. May heaven bless you all, and may its protection extend over all of the United States of America.

>
> Happy New Year

Single phase motors can rotate in either directions simply by
reversing one of the windings at the connection terminals, usually the
starting winding. - No double stock is required.

Which direction it runs depends on which way the armature is kicked
when power is applied. When the motor reaches a certain speed the
starting winding cuts out.

>[stuff deleted]

I've not been following this, so I don't know what the guy asked exactly
in the first place. But those two questions as you pose them at the
beginning really have nothing to do with terrorism.

They are very similar to questions we see all the time; people wanting to
use ham equipment out of band (and that includes people who are indeed
licensed hams and should know better), and absolute novices who have no
interest in amateur radio but want a solution without any knowledge of
licensing requirements, and people wanting to do things like pirate
broadcast radio.

Maybe he original message indicated something more. But as you present
it, there is nothing there.

Except for the name he is posting under, which doesn't even have to be
his real name.

And from that information, it strikes me that you are commenting based
on his name, not on what he is asking.

People can be clueless no matter what their name, so I don't think
it's fair to read something into this based on his name. Indeed,
if this was what the guy was up to, I'd expect him to use a name
that wouldn't stick out. I could argue that someone might have picked
the name precisely because they figure it will trigger someone like
you, that it's as bogus as so many other names people use in the newsgroups.

If I were a terrorist, and looking for info that I could use for some plot,
I don't think I would use a name that would indicate that I was a member of
a suspect group. It's too easy on Usenet to call yourself anything you
like, or nothing at all.

Or do I have it backwards and you need to add a solder ball? Damn, I
forget which way it was. In any case reverse it. If the pads are
connected remove the solder ball, if not connected then add one.

| on Sun, 4 Jan 2004:
|>Is that 230 V hot-to-neutral with 400 V hot-to-hot?
|
| Yes.

So getting 3 phase mains power there is not as troubling as it is in North America. The basic choices we have are either 120 V hot-to-neutral with 208 V hot-to-hot, and 277 V hot-to-neutral with 480 V hot-to-hot (in Canada this would be 347 V hot-to-neutral with 600 V hot-to-hot, and I've seen this available in Texas, too). Normally we have in single phase 120/240 V center tapped neutral so larger appliances use 240 volts. But with 3 phase, they get hooked up to the 208 volt connection, which tends to be a bit low and I have seen motors burn out early because of this. I suspect you don't have much need for appliances going above the 230 volt level. But it seems they have a more interesting compromise in at least some parts of Mexico: 127 V hot-to-neutral with 220 V hot-to-hot.

The usual designations for these voltage configurations are:
120/240, 208Y/120, 220Y/127, 480Y/277, 600Y/347
with sometimes the 3 phase values written the other way and sometimes the 347 volt value written as 346. Just about every combination of voltage to voltage conversion is available from transformer manufacturers, surplus resellers (Google for voltage designations), and on EBay.

Those voltages mean that equipment needs more insulation and less
copper. I wonder whether that works out cheaper. It's certainly less
safe.

>Normally we have in single phase 120/240 V center
>tapped neutral so larger appliances use 240 volts. But with 3 phase, they

>I have seen motors burn out early because of this.

No doubt. You could have three phases of 120-0-120, giving 480 V between
phases. The problem with that is where to ground the system! With a star
secondary and the star point grounded, you would get 0-120-240, not
120-0-120.

> I suspect you don't have
>much need for appliances going above the 230 volt level.

Not in UK, because our network impedance is generally quite low. We can
use instant-heat water heaters up to 7 or even 10 kW in most places. It
is possible to have a 3-phase supply, although the extra cost of
providing it is not usually carried by the supplier. On the Continent,
3-phase is now normally supplied to larger houses.

> But it seems they
>have a more interesting compromise in at least some parts of Mexico: 127 V
>hot-to-neutral with 220 V hot-to-hot.

127 +/-20%? (;-)

## 151. Kenwood TS 130 V

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-05 12:59:44 UTC
From: philiplevine@earthlink.net
Message-ID: <c72cb198.0401050459.2419a938@posting.google.com>
Source record: 24253

I recently bought a TS 130 V from a ham through the QTH site and after two weeks the maing tuning dial got stuck and wound up falling off. I've taken it to a local repairman and his worst case was that it might not be repairable. Apparently it's not just the dial but what he called the rotator processor (I think) and that part may not be available any longer.

Does anyone know of a good Kenwood repair or service center?

thanks

You are correct, of course. However, in a plant maintenance
environment, you do not wish to be out in bad weather, tearing down
connection heads and reversing winding leads. I'd much rather do that
in a climate controled motor control center where the starters are.
Starting 15,000 hp motors "in the shop" to check the initial rotation
would not be a practical matter, in my opinion. Vacuum contactors are
not cheep, and to have one, and the feed to it, just so this could be
done before installation just doesn't seem to be the right way to go.
I guess the old addage "Things are the way they are, for good reason"
seems to apply to the use of 3 phase motors in higher horsepower
applications.

One other comment that should be made concerns the use of variable
frequency drives on these motors. The power loss (in torque) that

occurs when reducing the line frequency is much more pronounced on single phase motors than on 3 phase motors due to the singles not having any phase overlap. This makes them unsuitable in many variable speed applications.

Yaesu FT-817 transceiver, s/n 0K020304
with all standard accessories, box, manual
with YF-122C CW filter installed
with Maha FNB-72 battery, 9.6v @ 1700 mAH
battery charges in radio when connected to DC power
NO DAMAGE OR REPAIR HISTORY

LDG Z-11 antenna tuner (factory assembled)
with box and manual
factory option One-Touch-Tune compatibility kit added
external ground binding post neatly added to rear panel
power connector changed to different size of same type
(original connector included so it can be changed back)

W4RT Electronics One-Touch-Tune module
attaches to Z-11 with Velcro pads
plugs into FT-817 and Z-11

Homebuilt DC power distribution box
nice long input cable with banana plugs
three separately-fused banana jack outputs

Homemade brackets to bolt FT-817 and Z-11 together
lightweight aluminum brackets
uses stock hardware and mounting holes
no mods required to radio or tuner

Homemade tilt stand
made from inverted CB radio mounting bracket
raises front of gear up off table for easy access
non-skid pads on bottom so won't "walk" on you

K1EL memory keyer
built by me from a semi-kit
has 4 memories
runs on 4 AAA batteries (included)
programmed by inputs from your paddles
with interconnect cable
with original manual

Boom mic / stereo headset
comfy full-coverage padded earpieces
leather pad on headband
electret condensor mic element
with all necessary cables
with homebuilt PTT switchbox
uses stock Yaesu mic cord (detaches from mic head)

Very nice padded camcorder case for field transport
entire station fits neatly inside
has storage pockets for everything

## 157. Laptop Batteries for QRP Power?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-05 16:35:10 UTC
From: Joshua G Senecal <senecal@ucdavis.edu>
Message-ID: <Pine.LNX.4.44.0401050828170.14598-100000@pc12.cs.ucdavis.edu>
Source record: 24259

Hi All,

In thinking about a power source for my recently acquired DSW-40, I realized that the Lithium-Ion batteries in my laptop (PowerBook G4) might be an ideal solution: small, plenty of power, within the DSW-40's power requirements (14.1V), and I don't need to buy a charger--I can just use the laptop.

Has anyone used laptop batteries for powering their gear? And if so, will you offer some practical advice/tips on using them? I'm concerned that there may be some difficulties, because modern laptop batteries aren't just power cells; there's some control circuitry and whatnot in there too.

Thanks!

Hi,

I have inherited a JIL SX-200 Scanner, which I would like to sell to a good home. I do have the manual, although I am not sure if it is a copy or the original, as it is in Sleeves in an A4 Folder, along with CCT diags.

As far as I know it is working, although I do not have a 12volt power supply for it as my brother took it for a CB!!!

I am looking for a reasonable offer.

I am in Kent, United Kingdom.

Clive

## 162. Yaesu FT-100 PTT Problems.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-05 18:26:14 UTC
From: rdcole@yahoo.com
Message-ID: <1196bdea.0401051026.69a6978f@posting.google.com>
Source record: 24264

Has anyone else experienced PTT problems with their FT-100?

When I key the radio TX Light will flicker and the radio transmits a
burst of noise.
When it first started I though it was the Microphone, so I tried the
Microphone from my FT-8100 and it worked fine so I ordered a
replacement Microphone. Now none of the Microphone work on the FT-100
but they all work on the FT-8100. I also have a Heil Headset with
Yaesu Adaptor and it works fine on all radios.
I would really like to get the DTMF Hand mike running since I need
Tones to control remote radios.

Any Suggestions?

Ron

Source record: 24265
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

Can any of you antenna pros out there tell me what would be the expected life span for a Cell Wave 4 element vertical dipole? Do not have the model number but the cost was close to $600 when purchased. The antenna is cut for 2 meters. Realize that a number of factors can be involved such as weather conditions, area installed etc. In this case it is up 80' off ground level and 300' above sea level just outside of WashDC.

Second question. I recognize that Cellwave has an excellent reputation. Are there any other antenna companies that may compare or exceed Cellwave antenna products in performance and durability?

Thanks.
73 Murray, K3BEQ

Not so much radical as impractical. The reason that radios haven't
become exclusively software controlled is the same reason you don't
drive your car using a mouse and a keyboard - it's clumsy and
impractical. So to make a black box radio with a PC i/f would actually
be much more expensive because almost no one would buy it.

I'm not going to be purchasing anything--I already have two batteries for my laptop and that's plenty. My interest in using the batteries was to save money. I'm a married grad student and need to keep costs down. The laptop isn't even mine, really, but is one issued to me.

Is price your only concern about using laptop batteries, or are there other reasons you feel I shouldn't use them?

From: dan9125@aol.com
Message-ID: <90dcbbbd.0401051419.7dc3431b@posting.google.com>
Source record: 24271

I recently purchased a Icom 208h dual bander and was wondering if anyone has tried getting more audio out of this radio. I have a 207-h also that has much better audio. The 208 seems like it needs to have something adjusted to give it a bit more. Im guessing there is an adjustment in there somewhere but i hate to turn the wrong pot and screw something else up!

Thanks alot Dan in ny

## 170. Re: Icom 208-h Question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-05 23:39:27 UTC
From: "Bob M." <xxxxx@yyyy.zzz>
Message-ID: <wLidnWjcwr0GaGSiRVn-hA@comcast.com>
Source record: 24273

I opened mine up. Surprise ! There are no pots to turn or screw up, so you can safely open it and twiddle all you want.

The radio is capable of wide band and narrow band operation, but I don't know how wide or narrow each setting is, and if you're using narrow already, that's as loud as it will get.

Did you try a good external speaker to find out if it's the little speaker in the 208 or the audio circuit that's giving you low audio?

Source record: 24276

I think I saw this topic on the 706 Yahoo group. I think you must make
sure you are sourcing the PSK signal from a higher output impedance circuit
to keep from loading the mic amp circuitry. The external input is in
parallel with the mic amp circuit. It is not a buffered input. You need to
have a large(er) resistor between the PSK output and the 706 input. You
will need more signal from the PSK to compensate.
I don't remember the numbers, but try this. Just connect a resistor
from the PSK input pin on the 706 to ground. NOTHING ELSE - DISCONNECT the
PSK interface. When you find what value changes the mic level an
acceptabley small amount (Perhaps it is 10K or 50K) , put this value in
series with the PSK output and increase the PSk level to get what modulation
you need.

## 174. Re: why 3-phase power?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-06 00:34:26 UTC
From: Steve Nosko <suteuve.nosukowicuz@moutouroula.com>
Message-ID: <btcvto$stb$1@newshost.mot.com>
Source record: 24277
Cross-posted to: rec.radio.amateur.equipment,sci.engr.manufacturing,sci.electronics.design,sci.electronics.basics

Why is three phase used?
Several people mentined the reason (motors) , but didn't go further. To get a motor to turn you have to generate a magnetic field that "turns". With three phase this can be done. The relative voltage/cirrent between two phases (lines) can each drive a winding and the result is a rotating magnetic field inside the motor. This will then "drag" the rotor around. With the single phase motor, this rotation must be made some other way. With the capacitor start/run motors, the cap provides some phase shift on a second winding giving a pseudo two phase supply and therefore some rotation in the field. The cap-start motors do then run on one phase when the cap is switched out. Thus the comments on "running a three phase motor on 2 phases (actually this is just one phase when one of the three lines is cut -- the "three phases" needed for the motor are not the three lines, but the phase between each TWO line-pairs...of which there are three pairs) .
Shaded pole motors use a part of the field core which is separated from the main core.. You will see a single turn of large copper wire wound around a small section of the core. This "shorted turn" causes a lag in the field in that section of the core and a resulting rotation of the composite field. These are usually in small blowers like typically found in bathroom fans. Go to the hardweare store and look at one of these motors.

whioch suggested:

Modifications for the Yaesu FT-8900

FT-8900R for extended TX/RX

1. Remove top cover of radio by removing all 8 screws.

2. Disconnect speaker and move top aside.

3. Locate the CPU on the radio, it has a crystal glued to the top
of it and is located in the front left corner of the radio, it's
the largest IC in the radio.

4. To the EXTREME left of the radio, you will see a row of pads,
all empty except for a diode to the front, and one to the back.
There are about 6 or 7 spots for diodes, but only 2 installed.

5. Remove the FRONT (closest to head of radio) diode with a small
soldering iron or other tool.

6. Turn the radio back on, it will AUTOMATICALLY reset.

7. You now have ext coverage eg. TX 137-174, TX 420-470, etc...

and

> expected life span for a Cell Wave 4 element vertical dipole?

1. Its "Celwave", not "Cell Wave". (Search also "RFS Celwave")

2. Celwave was formerly Phelps Dodge.

3. The model you want for 2 meters is the PD340-3.

4. A properly installed antenna with properly installed and sealed
feedlines will probably last longer than you.

> Second question. I recognize that Cellwave has an excellent reputation.
> Are there any other antenna companies that may compare or exceed
> Cellwave antenna products in performance and durability?

Other comparable manufacturer are Andrew, Sinclair, and Decibel
Products. Quality is comparable amongst all.

The IC-24AT and IC-2AT are quite different and take different
batteries. You can get batteries for either from any of several
battery dealers that cater to hams. Try DC Ace, Batteries America or
W&W Associates.

> I would say it's fair to call this 2 phase.

I am a sucker.

Direct and Alternating Currents by Oppenheimer and Borchers says " Any
circuit with a single source of a-c is simply referred to as single-phase
a-c"

If you look on the at the transformer on the pole and look at the primary
connection there would most likely be a single source of a-c feeding the
transformer.hence single-phase. Transformers fed by a single source of a-c
do not create polyphase voltages.

Example 2: if one connects a train transformer to 110 a-c and the
transformer has many voltage taps you still have single phase voltages
because the transformer is fed by a single source of AC.

Rich.

> whatnot in there too.

Li-Ion batteries are dangerous, they may explode if (a) overcharged or (b) discharged too rapidly. That's why individual cells are almost unavailable. Battery packs come with the necessary circuitry to protect the cells. As long as you use an existing pack I wouldn't be too concerned. Please note that contrary to NiCd, Li-Ion cells cannot deliver high peak currents. The expert at www.buchmann.ca indicates a peak load of >2C for Li-Ion vs 20C for NiCd.
I successfully salvaged individual Li-Ion cells from defeective notebook battery packs and used them to build an external power source for my digicam. Since I continue to use the original protection circuit I'm feeling safe doing so.
Remember to have seen an article recently in a German ham radio magazine describing the use of salvaged Li-Ion cells to power a transceiver. But also there the original protection circuit was used.

Hi all,

I've searched using google but can't find anything exactly on this topic. This newsgroup was the closest thing I can find.

I have the Jensen 2.4 ghz a/v sender and receiver system. This system works fairly well but I would like to boost the output of the sending unit as it can be finicky at times.

Has anyone done this or does anyone know where I can find plans/schematics to do it?

Any help would be greatly appreciated.

R

There is a wideband/narrowband menu option, as well as a high/low sensitivity option for the mike audio. Try those settings. I think they're on the power-up menu.

But unfortunately there are no user serviceable adjustments or parts inside, just like the little labels used to say.

This could be called nit picking, but if I have two which are 180 degrees
out of phase it does look like two phases, no? Any center tapped
transformer can do this and I think it is valid to call it two phase.
Connect across the two hots & you get twice the voltage, of course. Now
connect across two of the lines in a 3-phase system. You still get some
voltage ( don't know the numbers) , no? Why should 180 degrees not be
called two phases while 120 degrees is?
I agree that this can be called a "single phase system", but I still see
two phases for this special case. Symantics, perhaps as long as we all know
what is really happening, no?

Thank you, however, I doubt very seriously any antenna is going to
last over 70 years. But appreciate your input. Best estimate I
received from those in the business of installing the antennas is
in the area of 15-20 years.

Try a search on the seach engines.

I had an Autek filter in the 70s. No matter how I twisted the knobs,
while they would reduce the interference, they would also reduce the
signal, itself. It was a wash. Don't know that the manual will help.

Heh heh, well maybe you sounded "decrepit" to me in your original posting? Anyway, the 15-20 figure is good. If you use heliax, seal the hell properly out of all connectors, and mount the antenna and heliax very firmly, those no reason other than extremes of nature (lightning, huricane, etc,) to prevent it from lasting longer.

Ed

## 202. Looking to set up a Simpatch. Advise wanted!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-07 02:33:20 UTC
From: Ken <kwjw64@yahoo.com>
Message-ID: <3ffb70c7$0$2823$ad3619e8@news.netcarrier.net>

Cross-posted to: aus.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

I've been looking around on how to set up a simpatch. A simpatch is short for "simplex autopatch." HRO has told me to get their CS-900. I don't have a ham shack yet so I'm thinking about just putting the appropriate equipment I need in my room. That would include a radio, power supply, antenna, and maybe the CS-900, and anything else you think I might need. Would you happen to know anything about this type of set up? and/or do you have any advise?

Thanks
73,

Ken KB3KHI

I have 2 of them...1 I use in the car the other in the shack. At the shack I use a Turner super sidekick mike...yea its an 11 meter mike but the bassey audio sounds good. In the radio there are no pots or any adjustment for that matter. It is all controlled by the firmware. Make sure you are not in narrow fm and put the mike sensitivity on high. For now that's all you can do. Great radio though!! I had a Yaesu FT7100M what a piece of junk. This one is much better!!! Enjoy and 73's K2SGT

Bet you wish you had one for sale.

The last good one I saw went for $300!

I never got stoned but if it feels like this, I like it!!

Beauty is in the eyes of the beholder.

This radio brings back wonderful memories to many who had or used
Lafayette
CB's in those years!!!!!!!!!

When you are older you will understand what that means.

Thanks for the comment, go turn on your $39 dollar radio shack CB

and talk with class

Hi Steve,

It may be nit picking, but how would you describe a polyphase-3-wire-system, one wire grounded, where voltages do not algebraically add?. (such as supplied by two synchronous but out of phase generators sharing a common neutral)

> Steve, K;9;D;C;I

I believe (but check with a real electrician, I was only an assistant) that
this would be an unbalanced Edison circuit. A balanced Edison circuit is a
three wire system (four, if you add a ground) where there is a common
neutral and two legs of equal voltage and opposite phase.

## 218. Re: Looking to set up a Simpatch. Advise wanted!

You will probably be disappointed with the performance. Simplex auto patch presumes that the land line caller is radio savvy. You have to say "over" a lot to make things work. Better to build a repeater and use a half suplex patch.

> NiCd.

In this case I'm considering using the laptop battery itself, not opening it up and extracting the cells. Overcharging shouldn't be a problem, because I'd be using the laptop itself to recharge the battery. I don't think that I'll be drawing too much current, either, as the DSW-40 (an original one) only puts out about 2 watts.

BUT, with the warnings about Li-Ion cells in mind I think I'll see if I can learn more about the battery packs made for my particular laptop to determine if I really want to do this.

Thanks!

Long Island Mobile Amateur Radio Club (LIMARC), is looking for DONATIONS of "Ham" gear, like triband beams, rigs, and towers, to be used for our Emergency Communication Stations, and Field Day.

If you have any old equipment that you're not using anymore, and would like to donate it to our cause, we will make sure that you get a nice letter, being that we have 503 c(3) status with the I.R.S. ,for a tax deduction, from our club.
We really need your help, so please try to assist us in any way that you can.

Thanks in advance

## 226. Re: Advice Needed: How to boost signal on 2.4 ghz av unit

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-07 17:34:45 UTC
From: larryc@northwest.com
Message-ID: <3FFC4335.F5A5D2CC@northwest.com>
Source record: 24228

What do you mean by "finicky?" Are you trying to xmit outside the effective (recommended) range? Remember, at 2400mHz, things like air conditioning ducts and walls can interfere with signals.

What kind of antenna does the system use? Making certain that the rx/tx antennas aren;t blocked (or close to a wall, metal plate, etc) is a simpler way to ensure reliable operation.

More info is needed...

With Manual. $ 75

All Items Will include manuals, and any docs that I Have.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts, and I have several extra carts. I also have a
Scsii raid controller with 2 carts, that with the above,
you could have a great start on a server..

I also have a lot of C64's 3 good 3-5 fixable or parts.
Much peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
AND a lot of cartidges, and software - games to productivity.
Included is all manuals, plus extra books for programming ect.
Included is software to run a bbs from the C64..
I would like to sell it all as one group. Will cost more,
if sold piecmeal....

Shipping is NOT included

One place I worked had an odd feed into the transformer room.
100 V, 25 Hz., two phase.
Three wires, and the two phases were 90 degrees apart.
It was still live, but no longer connected to anything.

> 

At 2 watts, your DSW-40 current requirment is pretty low....way below the
battery's A/H rating. WAY BELOW. I=P/E = 2/12 = 160ma.

If you are that worried about using the laptop battery, get a 12v lantern
battery. It will last for months of QSO's. I used one with an HW-8 and it
was FB for about 3 or 4 months. It lasted so long, I thought it would never
run down. With your DSW-40, it might lose more energy through shelf-life
than operating time. :-)

Either way you go, go for it.

I heard that was called "Edison wiring". That is where they use 2 110v
branch circuits fed by 3 wires and there was 220v across the two hot wires.
I was told in the old days that kind of wiring was popular and most codes
required the neutral be soldered because if the neutral was opened there
was a good chance you would burn out every thing connected to one of the
branches (the one with the lighter load) .

Hi...er um... Smoke,

Well I wouldn't.
I only commented on the American system where two sources are availabe
(from a one phase system) that are 180 degrees out of phase and I can easily
call that two phases, but since you ask, I'll venture some speculation.

You say three things that seem to be self contradictory:
1- "voltages do not algebraically add"
2- "two synchronous but out of phase generators"
3- "sharing a common neutral"

#3 says that they WILL "algebraically add" as you say. Since they have one
common point to which they will reference. Therefore, you WILL measure the
difference of voltages wherever you measure between. What you read is
another matter depending on what #2 means.

By "synchronous ", you imply that they are the same frequency (zero phase
slip between them). If this is the case, there is still some phase
relationship between them and there will be some voltage difference between
any two randomly selected phases and therefore some voltage will be
measured.

If there is a phase slip (a small frequency difference), then the voltage
measured above will vary at the difference frequency.

If the phase randomly varies, then the measured voltage will do the same.

However, in all cases, you will measure the voltage difference of the two
phases you are measuring...Has to be... Unless you wait for another big
bang and hope the laws of physics are different...

'gards, Steve, K;9;d;c;i;;

I see that this will go to several groups and since I am ignorant of all
this kind of stuff, I am reading it on

Hello,

A good friend of mine own a Kenwood TS450SAT with probaly problem with the tuner.
The tuner works OK on all bands with the carrier full open but on 80 the tuner works ok till 3700 Khz but below that freq
for example 3699.99 , the tuner is trying to tune but the i don't hear the tuner working.
Is this maybe a setting in the delay or not or another problem ?

Sorry my boy.
It sold for $154.00
Inflated prices are for new or current items of any kind.
example: if you went to circuit city to buy a 50 inch TV, their price
was $500 dollars. Now you went to the wiz and saw the same exact TV
for $700 dollars. Now that would be the inflated price. Now who would
you buy it from?
Old classic stuff of any type might go for much more than the original
new price. In this case the radio
sold for $180 dollars (1967 dollars).
Old classic stuff is only worth something to someone who really wants
it.
Or somebody who wanted the item it their youth and could not afford it.
Or somebody who wants something that nobody else has or nobody else can
buy.
Anyway, enough time wasted on you.
I won't reply to your crude and nasty reply.
Be a good boy.

In terms of the number of different vectors from neutral, then I, too, would
call that 2 phase. I think they do call that 2 pole.

What would you call it if you took 480 volt 3 phase delta config power,
and connected 3 transformers with 480 in, 120/240 center tapped out, with
all three neutrals tied together? Would you call that 6 phase? I'd call
it a lot of wires.

That antenna will need some service to achieve a long life. The problem is when the Coax harness deteriorates with time, I would expect that you will need to replace or repair the harness ever 10-20 years or so. Most antennas of this class fail from physical damage. Lightening, Ice Damage, Tower climbers. or something else that physically damages the antenna.

Others in the class are Decibel, Andrew, Sinclair, Kathrein - Scala, Maxrad.

"

> You say three things that seem to be self contradictory:
> 1- "voltages do not algebraically add"

They will not add up using scalar quantities. You would have have to use
vector arithmetic or instantaneous values.

> 2- "two synchronous but out of phase generators"

. From MSBookshelf synchronous definition 3a. "Having identical periods".
I know by definition 3b means same frequency & phase. .

> 3- "sharing a common neutral"

> What would you call it if you took 480 volt 3 phase delta config power,
> and connected 3 transformers with 480 in, 120/240 center tapped out, with

Feeding single phase loads or poly phase loads?

The 120/240 are commonly for single phase loads. Hence single phase supply.
The 120/240 volt tap could not feed a two phase load unless you tapped from
two transformers on seperate phases.(P.S. two phase loads are something one
would find in airplanes).

> What would you call it if you took 480 volt 3 phase delta config power,
> and connected 3 transformers with 480 in, 120/240 center tapped out, with
> all three neutrals tied together? Would you call that 6 phase?

Most 6 phase loads that I am familiar with would have the 6 phases but would
be internal connections and would only require 3 phase feeder (AFAIK).

Well,

I haven't tried to run a TS450 on 3.699 but at first guess
it may be that you are trying to run the rig outside the tuner's range?
Antenna too short?? Just a thought.

From: mustang <adrian@ratherbeflying.net>
Message-ID: <3ffe44af_1@news.chariot.net.au>
Source record: 24161

I bought a 706 abt 3 months ago, and used it till I removed it from the
vehicle before christmas. It was on a shelf and not used until today
when I wanted to use it again. I find that all appears to be working,
except that I get no bar graph reading (on 40 & 20) when I speak!
I suspect I have done something wrong, but dunno where to look. I'm
using standard mic, and the ptt and up-down buttons work. Beats me.
I know it's under waranty, but I recently enquired about accessories for
it from the people I bought it from (Melb. Aust.) via email. No reply.
Any ideas folks?
Adrian.

Hans,
It sounds like the relay contacts for the 40 meter relay may be welded together. This is a common problem with Kenwood tuners. The failing relay is usually one band up from the highest band that fails to tune. A smack on the relay will sometimes free it. Otherwise it will need replacement. Could also be a bad capacitor, but that is rare on the 450.

>it a lot of wires.

If by 'neutrals' you mean the centre-taps, I'd call it 'nothing
surprising', because that's more or less how the US system works, AIUI,
except that the input is not 480 V but 4 kV or 12 kV.

This occurred during my lunch break. Since then I found the 2m & 70cm
bands OK in all modes. 6m is working, but only fraction of the power.
The power output decreases (in all modes) as the freq goes down to only
a few watts at 15m.
Very annoying.
Adrian.

I currently use JLOG (http://www.jlog.org). It has some nice features (keyer, contest scoring, etc.) and the author is very responsive to questions and bug reports. BUT, jlog is JAVA based, so it may not execute as fast as you need it to, especially if you're a hard-core, high-speed contest op.

Check out http://www.smallwonderlabs.com/ and look at the SW+ series. The DSW series is nice, too, but a bit more pricey. The SWL stuff is all good...well designed, high quality parts, and great support.

All the monobanders I know of are kits. You can probably find some assembled used units or get someone to build it for you...lots of guys will build it for you, often at no cost...they just like to assemble kits. Ask on the qrp mail list (qrp-l@lehigh.edu) and you'll get plenty of info.

Usual disclaimer...no financial interest in SWL, etc, etc,etc....

Hi Smoke

I think we're just getting tied up in words. I guess the terminology "algebraically add" threw me. I was thinking, but not saying the following, or did I...? I was describing using a _meter_. I thought the original question was something like "What would you measure...". Since I (and it appears you) understand adding or subtracting of AC signals must also consider frequencies and phase, without realizing it, I was assuming we were already on the same page in principle.
I think you must agree that A METER would actually read the difference between the instantaneous voltages. I'm pretty sure you're saying this.

The intent of your next comment elludes me, however.

> > 2- "two synchronous but out of phase generators"
>
> . From MSBookshelf synchronous definition 3a. "Having identical periods".
> I know by definition 3b means same frequency & phase. .

Same periods = same frequency, therefore this implies some fixed phase relationship. I believe my original comments then still hold. If you triggered a scope on one phase of one system and did not move it, as you move another probe around, you would see stationary sine waves of differing phase shift on every phase line, right?

That's disgusting! I didn't believe you so went looking myself, and found you were right. Phelps Dodge used to cater nicely to hams. When they became Celwave, they still gave us a discount. Now that they've gone international as RFS Celwave, they don't seem to give a hoot. Oh well, DB Products is just as good.

We had a nice Celwave PD 340-3 that never did work right. Antenna swr measured OK, but when we swapped the antenna out with just about any other antenna, it appeared that the Celwave was about unity gain. Could not measure any opens or shorts in the harness, but obviously something was wrong. Our club let the antenna sit around and warranty expire so we never did find the probem. A cheapie 3dB omni by Antenna Specialists seemed to do well enough for us. ... sigh ....

I used to have a Celwave, and I liked how you could set the pattern
to suit your location..... I have also made super J-poles out of
1" copper pipe that worked just as good, and were MUCH cheaper, and
lasted a lot longer....

## 274. Wanted: Schematic diagram for Heathkit HX-11 transmitter . . .

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-10 01:39:02 UTC
From: Stan Shankman <stantheman@visi.com>
Message-ID: <3fff5796$0$957$a1866201@authen.newsreader.visi.com>
Source record: 24176

Greetings all,

Okay, so I asked in an earlier post for the manual  and received no response.

But, since all I really want is the schematic, I thought I would try again.

Do you remember the Heathkit HX-11?

It was a short-lived Heathkit product  and resembles a DX-20  if I remember that model correctly.
Anyway, the HX-11 is a low powered crystal-controlled multi-band CW transmitter.

I m looking for an e-copy of the schematic diagram.

So, if anyone has one of these, and still owns the manual it would be appreciated if you could make a scan of the schematic.

I bet other HX-11 owners would like it also!

Thanks all,

Stan Shankman  K7SJB

I have the 20 meter ten tec monobander. Neat little rig. Not that hard
to build. Hears as well as my Icom 735.

Check the MFJ web site. They offer a series of monoband 5 watt cw
rigs, already built @ $190.00, with all kinds of accessories.

They also have a series of 2-watt monobanders, wired @ $130.00 (or
partially wired at $80.00).

## 276. FS: Icom R-2

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-10 03:33:17 UTC
From: Gene Vico <genev2000@hotmail.com>
Message-ID: <3FFF727C.39F6327F@hotmail.com>
Source record: 24178

I have an Icom R-2 in excellent condition.
This is a neat, very small, wide frequency coverage receiver, and works
very well as a scanner.
I am asking $125 or BO.

K1TAV

What is your SWR reading? This radio has an SWR foldback circuit, meaning
if your SWR is off the scale (too high), it will automatically reduce the TX
power to save the radio.

## 278. Need Ballantine 5500B Counter Manual

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-10 04:15:59 UTC
From: Basil Sneeringer <bsneeringer@cox.net>
Message-ID: <dtuuvvop1rd84e7080snc63bfju8gmft6l@4ax.com>
Source record: 24180

Hi.

Is there anyone who needs or wants a Ballantine 5500B Counter Manual?

Maybe we can get together. I have a suggestion.

Thanks,

Basil Sneeringer

## 279. FS: Heath HW-2M HT for parts

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-10 07:22:36 UTC
From: Scott Wilkerson <w9vhe@sysmatrix.net>
Message-ID: <fq9vvvse7nlkho4rv52qkf7auqhiavs4tp@4ax.com>
Source record: 24181

Heath HW-2m HT, used (of course!). Comes with battery pack, wall wart charger, duckie antenna and manual. Was repaired once, worked for a year or so, now just motorboats its audio continuously (squelch open with no signal, or receiving a signal as well). Selling it for parts, very similar to the Standard model 108 I think. Best offer + 5.00 shipping takes it. Email to w9vhe@arrl.net with any offers - It will NOT be offered on eBay for a while so this isn't a "check out my auction post!
Thanks and 73 to all in the New Year

## 292. Decent Cigarette Lighter Plugs? WHERE??

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-10 23:48:18 UTC
From: kelly@dvol.com
Message-ID: <d22b54c3.0401101548.70cb97db@posting.google.com>
Source record: 24194

Backgrounder: Where can one get a decent (i.e., robust)
general-purpose automotive cigarette lighter plug/tap? I have some
equipment which draws some amps at 12VDC. I'd like to install them in
my car on a temporary basis from time to time and use the cigarette
lighter receptacle as the power source. 2M mobile xcvrs being typical,
10 amps for a 50 watter, etc. One has a radio or whatever and one has
the specific power cable for the whatever. The problem (MY problem at
least) comes at the far end of the power cable, the widget, the plug
which connects the input end of the power cable to the volts and amps
inside the cigarette lighter receptacle. I've been to Radio Slack,
I've been to Pep Boys and I've been to HRO. The *CRAP* plugs RS and
Pep sell for this purpose are giggle-level JUNK. No surprise there of
course. As if I'll be able pull 10 amps thru the #26 wire they supply
with their plugs . . the HRO guy told me to try a hamfest. "Thanks Bob
but it's eight degrees F here, maybe I can find a warmer hamfest
tomorrow".

I have a borrowed example of a plug which should do the job in front
of me right now. The front end is typical, a spring-loaded centered
plunger for the plus side contact and two opposing leaf springs for
the ground side contacts, internal AGC fuse. At the aft end there two
nice big red/black screw-down terminal posts of the usual design which
can accomodate up to #10 wire, maybe even #8. Nicely finished, quality
piece. The only markings on it are a 5.9+mm patent number which has
been dinged and can't be read.

(A) Does anyone out there know where one can buy these?
(B) Or have a source for a similar alternative plug?
(c) Ignoring the fuse ratings how many amps can auotomotive cigarette
lighter receptacles supply before they become toast? What are the
standards/limits? Versus having to punch #8 wire thru the firewall and
do it right?

TNX a bunch, Brian W3RV

## 293. Kenwood 930/940 Repair Service

If you can stand it to be directional, you can put a corner reflector
on the antenna. There are a bunch of websites that address this issue
for wireless lan. Cardboard, aluminum foil, origami and "you've got gain."

Hi
I just got a Kenwood TKR-720 VHF Repeater
and it works great other than microphonics problem.
Does anyone know the fix for this?
If I tap on the outside cabinet you
hear it on the output when the repeater is keyed,etc.
Any help from Kenwood Gurus would be appreciated.

(Portion removed.)

No one would rotation test a 3 phase motor of any size "in the shop" as the field connections are the ones that are important. If the rotation was found to be wrong then yes it would be corrected at the MCC.

As for testing single phase motors, as most are of small size and field wiring orientation does not affect rotation, these could more easily be checked in the shop before installation.

Single phase motors usually come with a stated rotation from the manufacture so testing is not normally required.

Clock wise is the norm as this ensures that nuts on the ends of shafts are being 'threaded on' when running.

Any millwrights and electricians I have worked with will rotation test motors, single or polyphase, before coupling it to the load just to be certain it is correct for the particular load.

Rob.

Source record: 24056

Hello dear all !

I am using R-7000 vertical located on the roof of 9-store building.
I was happy to notice the absence of any QRM for both radio and TV broadcasting with my new 1 KW amplifier.

But there is the only problem with neighbor from the last floor - he can hear some SSB transmission in his phone and
It slows down or even breaks the dial up connection to Internet.

Are there any links for ready or homebrew RF filter for "last mile" of phone line?
Any suggestion for this case?

Is it possible to ovecome this problem at all ?

Regards,
73 de UR5EOA
Igor

Hi, Igor,

Have you tried ferrite beads on his phone line. There are large ones that clip around any small line (like a telephone line). If the RF is coming in because the phone line is acting as an antenna, this might do the trick.

Good luck,

Barry - N4BUQ

Hey Jerk Jerk,
Because many hams started off on CB.
Many could not afford the item at that time.
Many might want a rare radio, whatever kind of radio it is.
Seems the winner wanted it bad enough to be the high bidder.
And finally, what is it to you??
I have been watching your comments to many postings here as well as
others.
Seems like you and the "chosen" few should stop being the gods of the
newsgroups.
Did your mama ever tell you if you have nothing nice to say, say nothing
at all?
Seems not.
Too bad, the world would be a much better place without nasty people
like yourself.
Nothing better to do? Go out and find a good woman. Maybe she could
change your
bad manners.

The material in the post was irrelevant to the purpose. The nonsense at the end is (according to reliable 'net urban legend) a crypto key for the real message. Usually these nonsense posts are accompanied by either a low level virus or a racial attack, to distract from the real payload.

There's no single standard for all vehicles.

Your vehicle owner's manual should tell you how many amps your particular cigarette lighter circuit will safely provide, and an extra robust plug may exceed the capapabilities of that circuit, or exceed the specs on the fuses for that circuit. The fuse specs should be in the owner's manual, too, or you should be able to track the fuses down yourself.

Most firewalls have one or more unused holes -- it's just a matter of finding the grommit, and pulling it out.

Bob

A more common explanation of the "nonsense at the end" is that it's a
"hashbuster" - a purely random string, different in each individual
copy of the posted or emailed spam. Its goal is to [attempt to]
defeat ISP-based spamfilters, which attempt to identify multi-posted
USENET articles and spam email by looking for identical subjects,
identical contents, etc.

Spammers of all sorts (amtisemitic and otherwise) have been doing this
for years. I believe that some of the better spam-detection software
is now capable of looking for these gibberish words/phrases, and
scoring the articles/email as "probably spam" due to their presence.

Hi to all,

Someone offered for an reasonable price an Aviation Headphone / Mic
(Avcomm). Noise canceling for the headphones by beeing very closed
earcups and something like a 'noise reduction chip' in the Mic.

Are those devices useable for Ham Radio?

Anyone ever tried this with an ICOM or Yeasu tranceiver?

Any comment is welcome!

Try a I know it will sound strange, but try a truckstop. Semi's have
all sorts of accessories that plug into cig lighter or accy. plugs, so
truckstops usually carry a good adapter and other items along that
line.

Source record: 24076

Hi, Frank. I have an IC-746PRO, which has recently been to Icom for all the mods, including the electrostatic diodes, and is in excellent (as-new) condition both electrically and cosmetically. Complete with hand mic, power cord and original manual.

I want to get rid of it and get a 756PROII - willing to ship w/professional packaging and insurance for only $900.00.

Intersted?

HI THERE .

I have searched the web for Months Now and cannot find much info on the
standard c710 tri-turbo handheld , why is this ???

i am not using the radio to its full poitentioal as i dont understand
all of the abbriviations in the setup menu , and their uses
although some are easily worked out . i could do with a copy
of the user manual

if anyone has one , in English that they could
COPY ME , SCAN , WHAT EVER , I WOULD BE VERY GRATEFUL
and of course , all reasonable costs refunded ..

thanks and hope to hear from you soon

In good working order, though the power supply could use new
electrolytics. Wires for the power supply cable have been soldered to
the front panel connector. BFO added. Front panel repainted in
"seafoam white" (all I had at the time). Otherwise pretty much
original condition. Cheap to a good home.

I'm in southern Minnesota for shipping or P/U.

Regards,
Allen WA0OHE

Not strange at all Keith. I borrowed the nice plug I described above from an over-the-road trucker & ham buddy who picked it up at some truck stop mobile electronics boutique. These guys really put their lighter receptacles to work and they can't afford to mess around with junk. But he drives 4,000 miles/week and at this point he has no idea where he got it so I'm sort of stuck unless I go Interstate crawling.

Back to Google . . they gotta be out there.

Hi Dan,

Gee, Just when I thought I knew everything about a TS-440, I see/read
something new!!

What exactly is this cable, and what does it calibrate? If you can
tell me more I'll bet I can help you.

I have built a number of interfaces for the TS-440 that connect the
rig to a PC for all kinds of purposes.

Brian,
Did you see the one at Radio Shack which looks very much like the one you describe? The binding posts are not full size, but the construction is above average. I bought one and think it is...well I'll say ok. It says 10 amps if I recall & If you believe it. It looked better than anything else I saw and I thought would be ok for moderate loads up to, oh, I don't know 6-8 amps is my guess.

Also note that the newest "power connectors" that look like cig-lighter recepticles have a rating posted right there. I don't remember what my van says. I think (but don't hold me to it) mine says 180 watts total for both of them (One in rear too) -- about 12 amps.

The real cig lighter can't supply much and I have had one go south with a 25 W mobile. It was dropping quite a bit of voltage causing a low rumble on the FM TX so that it confused the repeater CTSS decoder. Took a while to figure out--it "reparied" itself interestingly enough with no intervention from me. I since went to the battery and more powerful rig.

Have you tried Digi-Key, Mouser, Newark, etc.?

Have you tried looking for an internet Truckstop? Surely someone, somewhere has such a beast?

Finally, it never hurts to _call_ these places. Some will just brush you off, but some may be willing to tell you about what they have, and keep you from crawling all over the US interstate system looking for the right part.

Let us know what you find -- I'd like to know where to get these things, too.

I checked my own car last week and the circuit is fused for 15 amps. I
was just wondering if 15 amps is some sort of "standard".

I've done #8 zip cord thru firewalls installations but that's not a
consideration in this instance. I want to be able to occasionally move
my equipment from vehicle to vehicle without having to run a power
cable all the way to the battery. It's apparently done all the time
with a ten amp plug. Back to square one . .

I believe there was an article in QST within the last three months
describing the aircraft interface. It needs power for the mic. The
interface hasn't changes for a long time and you can still use a carbon
mic., so it provides a fairly high level output.

Hello Christian...
It is because your interface pulls the Mic Input at ACC 11 down. The only way to solve that problem (with your type interface), is to unplug ACC Connector before going back to SSB.
You will get much better results, if you use small Audio Transformers to switch in between the Audio output (Pin 12 ACC) and the PC speaker Input of the soundcard - and also between ModulatorInput (PIN 11 ACC) and the MIC Input of PC-soundcard.
Please look for details at http://www.qsl.net/wm2u/psk31.html

Yes, that is what it seems to be; however, having purchased my TS-440 secondhand, the cable was not supplied, so I had no knowledge of its existence until reading the manual.

What made me think that it was more than a wire was the wording in the manual. It states that this cable has a one-pin-end and a two-pin-end. I did not know if this cable contained some simple circuit or what.

Thanks for the enlightenment.

(snip)

I have one of the Radio Shack binding post plugs as well. It's in one of my 'go kits' for emergency use.

Frankly, I think you'll also have to worry about the quality of the cigarette lighter *plug* as well as the output capacity of the jack. As you mentioned, the tip of these things is spring loaded. When you run a LOT of amps thru it (the spring) it eventually looses its 'spring' and the plug becomes unworkable. Remember all the current passes thru the spring (almost like a fuse) no matter how heavy the actual connecting wire is.

Richard in Boston, MA, USA

I can't see why it should (the spring pass all the current), but even if it
does, can you not insulate either or both end of the spring so that it won't
conduct?

Ken

The spring is part of a serial path -- tip > spring > fuse >
wire.

<----| ////// [[[[[[[[ -----------------

Insulating the spring would leave you with an open path, just like
cutting the wire.

Frankly I doubt the spring-weakening idea. Some lighter adapters are just poorly made. I've had some fail to make decent contact when brand new. I've often had to twist the adapter around until it made good contact.

I also bought a 110V to 12V (lighter scket) adapter and had the same problem as in the car. I originally got it to avoid battery failure problems while uploading firmware to my GPS unit. It still required a little twisting to make good contact. Same when I later used it in my office to charge a cellphone.

I have no idea what exactly makes this kind of connector unreliable, but I've never yet found one that didn't cut out intermittently.

It won't work without an adapter.

The microphone (it is an active device) needs power supply.
The industry standard is a 12V power supply thru a 470 ohm
resistor to the 'hot' lead of the microphone. The audio
is AC coupled from the 'hot' lead. The output level is
usually adjustable from about .25Vrms to about 2.5Vrms.
The AC output impedance is very low - probably a few tens
of ohms.

Bob.

## 352. Adding an IF output

I have an IC-290A to which I'd like to add a 10.7mhz IF output. I need
bandwidth of about 1mhz and it appears the best place to get this
signal is off of the mixer output pin. How should this output be
coupled to the mixer output? Is any isolation necessary? What should
I know before I attempt this? (I can solder well, etc...)

You could use a JFET in self-biased mode. I would use a 100k series resistor to feed the gate of the JFET; these devices typically have an input C of around 8pF. You don't want to end up detuning your mixer circuit. The 100k resistor should provide the desired isolation.

VW seems to use a 20 amp fuse for the lighter -- at least in the Jetta.

The problem seems to be voltage drop -- perhaps they can handle 20 amps, but there is still voltage drop -- even 10 amps had a good deal of voltage drop.

Radio Shack sells an adapter that would work. It's rated at 10 amps and comes with a pos and neg binding post, like that on a power supply. With a decent car ACCESSORY port (not cigarette lighter port), you can run a 50 watt FM radio. I have been using on in my work car with no problems. The radio indicated over 14VDC when it is turned on and plugged into the aftermarket accessory port.

>At the aft end there two
>nice big red/black screw-down terminal posts of the usual design which
>can accomodate up to #10 wire, maybe even #8. Nicely finished, quality
>piece

That sounds like the one I picked up from Radio Shack. Part number 270-1521. Here's a link:

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=270-1521

Hope that helps!

> bandwidth of about 1mhz and it appears the best place to get this
> signal is off of the mixer output pin.

Probably, if the mixer goes straight to a filter anything further into the radio would already be filtered, so sooner is better. If the mixer is a diode-ring and it's followed by an IF preamp then you want to go off the output of the preamp, however.

> How should this output be coupled to the mixer output?

Lightly. I don't know what mixer the IC-290A has, but if it's a diode-ring then the impedance presented to it's output port is very important for intermodulation performance. Furthermore the impedance seen by the IF filters is usually critical to proper filter operation. If it's an active mixer the 3IM performance may not be such an issue but you could still lose gain or mess up you filter performance.

Ideally you would redesign the coupling between the mixer and the following stage so that both the mixer and what it's attached to sees the same impedances that they did before, but with some of the energy diverted to your nefarious purposes. This may not be at all necessary, you may be able to get away with just attaching a fairly high-impedance amplifier to your mixer pin.

> Is any isolation necessary? What should I know before I attempt this?
> (I can solder well, etc...)

If you can get a copy get "Solid State Design for the Radio Amatuer" by Hayward and DeMaw. That's out of print, so a second choice is "Radio Frequency Design" by Hayward, which is currently sold by the ARRL. I have both of these books, and they're both good for me. I've also seen "Experimental Methods in RF Design", by Hayward, Cambell, and Larkin highly recommended by a trustworthy source, but I can't speak for it myself. "RF Design" has more complete technical descriptions (it would make a good college text), but "SS Design" has many more practical examples. "Experamental Methods" is supposed to be aimed more to the amatuer builder than "RF Design".

## 363. Looking for decent HF signal generator

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-13 16:51:52 UTC
From: William Mutch <wcm1@NOSPAM.cornell.edu>
Message-ID: <MPG.1a6dec35f5ef95f5989747@newsstand.cit.cornell.edu>
Source record: 24116

Our undergrad teaching labs have a couple of really crappy cheapo
RF signal generators that will do LF and HF on fundimental and near VHF
on 3rd harmonic. The waveform is so unstable that you're lucky to be
able to read 2nd signifcant fugure of frequency on a good counter and
the voltage output across a purely resistive load varies more than
10dbv. They are just about useless.
Does anyone know of a model that could be got, new or used, for
not much more than a kilodollar that would be stable and readable to at
least three signifcant figs. (interpolate to 4 ) and is well enough
buffered to maintain a constant output level.

<< I was wondering if anyone has had any problems with RF affecting this car or the Ford Taurus (Same car, different name). >>

My old company car (1999 Taurus) did just fine with the Alinco DR570 and the 6M sideband rig installed, but was noisy (S4-S5). The new company vehicle (someone here likes Fords, don't know why) has quite a bit more RF noise but the NB and DSP handle it. Noise reduction mods go on the fuel pump leads this weekend. Current install is the same ole DR570 and the Yaesu FT857 for HF/6M driving the ATAS100.

Neither vehicle was affected by RF from the radios, and the present Ford has never hiccupped w/100W out from the 857. Power is directly from the battery, everything is well grounded.

Watch Ebay for HP 8656A or B Sig Generators. Synthesized to 990 Mhz. Stable
and programmable. Have been going for around $500. Can use an external
reference for more accuracy.

I would certainly advise the HP8640B (to 512 MHz). One of the best
signalgenerators available. And ... affordable.
Cheers,
Harke, PA0HRK

|>all three neutrals tied together? Would you call that 6 phase? I'd call
|>it a lot of wires.
|
| If by 'neutrals' you mean the centre-taps, I'd call it 'nothing
| surprising', because that's more or less how the US system works, AIUI,
| except that the input is not 480 V but 4 kV or 12 kV.

Whatever the input, the point is having all 3 phases together at the same
place (not one phase on one street, another phase on another, and so on).
Graphically it would be a 6 pointed star. But I have never seen any dry
type 3-phase (3 coils on an E-core) transformer with this secondary wiring
configuration. I have seen them where they did 120/60 and tied all the
center tapped neutrals together. That gets you 120 volts, but that's not
any more useful than the more common 208Y/120, and in fact uses more wires
for the same benefit. What I was thinking was being able to get 3-phase
plus true 240 volt (instead of 208 volt), plus lots of 120 volt, where the
120/240 needs are well in excess of the occaisionally seen 240 delta with
a center tap to get 120/240 off one winding (which limits the load to a
small portion of the overall load ... which is fine to run some lights in
an industrial location that needs 240 volt 3-phase). But if the balance
is that some 3 phase is needed, but lots more 1 phase is needed, and some
true 240 is needed, this is a configuration that can do that and keep the
phases in fair balance.

|
| Most 6 phase loads that I am familiar with would have the 6 phases but would
| be internal connections and would only require 3 phase feeder (AFAIK).

But what I was thinking of was lots of 120/240 volt 1 phase loads spread
over 3 phases to keep them in balance, while still having true 3 phase
available for some loads that need that (you can still get 208Y/120 out
of this scheme).

Something close to what you describe is commonly available in many areas of the US. 240 volt 3 phase in a delta configuration with one transformer center tapped for a grounded neutral to provide 120 volts for lighting, and receptacle load, and three phase 240 volts for motor load or high capacity heating loads. The transformers can consist of three individual units with the center tapped one providing 120 volts being much larger than the other two, or an "Open Delta" three phase configuration utilizing two transformers. It is very common in residential, office, and light industrial areas. It can be superior where there is motor load, and 480 Y 277 isn't available. Unless motors are specifically rated for 208 volts there can be significant power loss, and heating from the reduced operating voltage.

Source record: 24129

Have for sale some excellent condition Kenwood gear. I'm the second owner. TS-830S Gold Edition has the narrow CW filter. Excellent condition. $400 plus shipping. I tried it on 75 and 40m ssb and got good audio reports. Didn't check if the WARC mod was done or not; just involves clipping one or more diodes.

VFO-230 is the digital synthesized vfo. Includes interconnect cable. Excellent condition. It has the "slow tuning CW mod" that enables smooth, easy tuning with the narrow CW filter; mod is reversible. $250 plus shipping. Will not sell the VFO alone unless the transmitter sells first.

I cannot sell or ship outside continental US unfortunately.

Thanks for reading the posting.

73s,

Evan

Thanks for the reply. I did bring my HT in the car and noticed quite a bit of ignition noise, but that may be specific to the HT. As far as DSP and NB's go, the radio I'll be installing is a 2m/70cm FM rig, so those features aren't available. I have used this rig in my Hyundai Elantra for a while with no problems, even with the only "ground" being the negative wire to the negative terminal on the battery and nothing else grounded.

Well, of course I can't comment on whether that arrangement is used in
USA, but it seems to me that any site that has a LV 3-phase feed *needs*
such an arrangement for the reasons you cite - notably that it needs 120
V single-phase supplies as well as 240 V 3-phase. Or are all such
3-phase supplies provided at 277/480 V?

| Well, of course I can't comment on whether that arrangement is used in
| USA, but it seems to me that any site that has a LV 3-phase feed *needs*
| such an arrangement for the reasons you cite - notably that it needs 120
| V single-phase supplies as well as 240 V 3-phase. Or are all such
| 3-phase supplies provided at 277/480 V?

The typical low voltage drops in US and Canada are (with varying levels of
availability):

1 phase linear, 120 volts hot to neutral, 240 volts hot to hot
3 phase wye, 120 volts hot to neutral, 208 volts hot to hot
3 phase delta, 240 volts hot to hot, one winding center tapped for 120 volts
3 phase wye, 277 volts hot to neutral, 480 volts hot to hot
3 phase delta, 480 volts hot to hot
3 phase wye, 346 volts hot to neutral, 600 volts hot to hot
3 phase delta, 600 volts hot to hot

As you can see, 120 volts is available from the first three. In the case of
the center tapped delta, no more than about 5% of the load can come from the
single phase loads attached. You can't center tap the other windings to do
the same because you'll end up with unsafe neutral to neutral voltages (120).

Lots of things designed for 240 work on 208 volts, so the 2nd case is usable
in a lot of places. But those devices often work with less performance.
Motors, for example, would have less available horse power and may stall on
loads that would work at 240 volts. Thus I see a need to get a real 240
volts.

If the 1 phase load is less than 5% of the total capcity, the third case can
work. But if if your need for 1 phase power is large while you still need
3 phase power, there are a couple options. One is for the utility to provied
separate drops for 1 phase and 3 phase. I've never seen that done, and have
seen documentation that some utilities won't do that. The other option would

be to take regular 3 phase at whatever voltage you get it (208, 240, 480, 600, 2400, 4160, 7200, 12470, etc) and put 3 separate 1 phase transformers on each phase (I've never seen a 1 phase transformer with a primary above 600 volts) and just connect all the neutrals together. Then just make sure you divide up the 1 phase load reasonably well balanced. You end up with 6 different hot phase angles at 120 volts 60 degrees each, and 240 volts between the most distant hots (3 sets). What I have not seen is doing this all on the same E-core (like a regular 3 phase transformer does), but with the 6 hots and 1 neutral. But that is 7 wires total.

By the way, if you go with 6 single phase transformers/cores, 3 of which have their primary connected to the hot to hot lines (208 or 480 or 600), and the other 3 of which have their primary connected to the hot to neutral lines (120 or 277 or 346), with all 6 secondaries center tapped for hot to neutral at 120 volts, then what you have is 12 wires with 12 different hot phases at 30 degrees apart. You could do this (at whatever secondary voltage you need) as part of a DC power supply to get a really low ripple level at a higher frequency (720 Hz in US/Canada), doing better than a regular 3 phase DC power supply would do (more ripple at 360 Hz).

The problem with this configuration is that the 1 phase loads are limited
to about 5% of the total KVA capacity of the transformer. It's fine for
industrial users that have huge amounts of 3 phase need compared to the
lighting/office needs.

There are 277 volt lighting systems available, too, for those with 480Y/277.

But if your 1 phase load is a big part of your total, yet you still need 3
phase power for some big motors, my idea can achieve that and let you go
beyond the 5% limit on the 1 phase loads.

I am all too aware of the issue where equipment designed for 240 volts just
can't do the job on 208 volts. In many cases things have to be derated, such
as less HP in motors, and longer warm up times for ovens. In worse cases,
there can be failure (motor burnout due to overheating due to either stalls
or excessive start current times). Getting 240 for what needs 240, under
the need also for 3 phase for other equipment, or because that's just how
the power is provided (utilities often don't provide 1 phase if your load
is more than 400 to 600 amps).

## 384. Vertex FTL-2011 questions

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-14 07:42:40 UTC
From: Adam <nospam@nospam.none>
Message-ID: <D5idnT0p4Ih0b5ndRVn-tw@gbronline.com>
Source record: 24135

Hello, all. I have just received a Vertex FTL-2011, four channel, VHF mobile rig. Unfortunately, there are two versions of this radio, the "A" version, and the "C" version, and I don't know which one I have. I have even done an FCC ID search on the FCC website, but that didn't help (it just listed the two versions! ). The "A" version can be programmed from 134-160 Mhz, while the "C" version can be programmed from 148-174 Mhz. I am wanting to use this radio on the 2 meter ham band. Looking at the model number on the side of the radio, it reads only FTL-2011. The FCC ID number is: AKHFTL-2011

The only other number listed is the DOC T/A No. I did a search on Google, "DOC T/A" and got nothing. There are two channels programmed into it, and both are 158.250...even THAT does not tell me what model I have, haha. If the frequency was above 160 Mhz, I could assume it was the "C" version. I have a few questions regarding this rig: 1. Is it possible to determine what particular version I have ( "A" or "C" ) ? (2) Assuming I have the "C" version that is programmable from 148-174 Mhz, is it possible to "stretch" the band limits to work in the two meter ham band? Finally, (3) If this radio will not work for the two meter ham band, I would like for it to work on the MURS (Multi Use Radio Service) band. Can this radio be programmed for 2 watts output, or is it only able to be programmed in multiples of 5? i.e., 5 watts, 10 watts, 15 watts, etc. I have seen programming software from vendors that sell Vertex equipment for reasonable prices. For some reason, Vertex is not as protective of their software as Motorola is. I've heard it takes "an act of Congress" to (legally) purchase Motorola RSS I know that Vertex is not as good as Motorola, but I got the radio cheap...and the microphone (and radio, for that matter) is built like a tank. I guess I will have to take it to a Vertex dealer to get it programmed...as it seems you have to have an old computer to get the software to work properly :-(

I would like to get my cousin interested in radio, and I figured MURS would be pretty good for now. MURS max. legal output power is only 2 watts, and I would like to try to abide by that little rule, haha. Fortunately, it requires no license, and there is no trash-talking on that band, nor interference (YET, on both accounts) in my cousin's town. I bought him and my other cousin a pair of FRS 462/467 Mhz HTs that work surprisingly great, but, there are so many other kids and even businesses that use them too (heck, even the local fire department used channel 14 the other day, even though they have their own frequency in the 154 Mhz band), it would be nice to run a little bit more power, and have a quieter band.

Sorry for all the questions, and hopefully I did not post them in the wrong newsgroup (if I did, please point me in the right direction). I looked for Vertex and Yaesu newsgroups, but none came up. Any help you can

give me is appreciated. Thanks.

FS: tower and antennas

Hi, all concerned:

I have a tower and antennas for sale, in Cincinnati, OH.
The package includes:

1. 80-ft Heights aluminum tower, s/s bolts, locking nuts, and ro-shelf, less concrete base and base rods (I used 1-1/4in threaded steel rods available from either Home Depot or Lowes in 6 cu-yds of 5-bag concrete)

2. 20-ft al mast, 2-in OD, 1.5-in ID

3. CC X7 5 yrs old, in air 2

4. most of a CC 40M rotatable dipole (could be put on X7 boom)

5. CREATE worm-drive rotator, and lotsa rotator cable

6. most of a HyGain 2L 40M

7. lotsa coax

All is on or near the ground for inspection, and good to go for $2500.00 ono. You pick up, or maybe I can get my son to help, for a fee, with his pickup truck.

I had a stroke last spring (no sympathy needed, just your prayers, tks) and simply can not work up the enthusiasm any more for things past verticals and wires in the trees.

Got a ton of other stuff good for homebrewers too ..

Lemme know. 513-674-7202 eves and all day weekends eastern time.

Thanx, and God bless.

73, Dave, N3HE

Commercial buildings in Canada and the US typically use 120/208
3-phase.

|
| Commercial buildings in Canada and the US typically use 120/208
| 3-phase.

But often the drop is a higher voltage. I've worked in places with 480Y/277
600 (not sure if it was 600D or 600Y/346), and 12470D. Then it gets lowered
to operating voltage by transformers inside. Heavy duty 3 phase motors can
be had for 208, 480, and 600 volts. Generators can be had for all kinds of
wiring configurations and voltages (certainly from Generac).

Interestingly enough, though, is that where I have commonly seen this is
mixed residential and
commercial areas where the primary need was for 120/240 single phase and
perhaps a single 3 phase user
such as a deli or gas station that used 3 phase motors for refrigeration or
air compressor. In these cases, the
configuration was typically open delta with a smaller transformer for the
additional 3 phase requirement

## 392. d.c. input spec for icom 735

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-15 02:20:46 UTC
From: larry <larya@rogers.com>
Message-ID: <2OmNb.31110$%wh.11177@news04.bloor.is.net.cable.rogers.com>
Source record: 24145

Greetings

I am in the process of putting together (battery power supply) for my amateur radio equipment....I have an ic 735 and ic 275a.

I have a number of rechargable nicad batteries 4.400 amp hour and 7.0 amp hour.. 1.25 volts..

I need some information about the ic equipment which I can't seem to find in the manual...
In the manual the d.c. input reads 12 volts...

Can someone tell me what the safe upper limit of these radios tend to be?

I don't plan to come anywhere need the upper limit but I would perfer to make a battery pack containing 12 x 1.25 volt cells rather than 11 cells.

My battery analyzer, cadex 7000, can only analyzer a series string of 1 to 12 cells.

Adam...
When you run the programming software it will tell you the model of the radio. Both versions work just fine in amatuer service. The transceiver CAN be programmed for low power on a "per channel" basis.
You will need the programming cable (plugs into the mic socket). You CAN "roll your own" from a Icom or Kenwood cable by making an adaptor.
The FTL-2011 is a very good radio for Echolink or ILRP service. It's not really legal for MURS service. There IS info on the radio on the Vertex radio site.
Hope this helps......Eddie

My Icom 735 manual specifies the power supply requirements: 13.8V DC,
plus or minus 15%, negative ground.

At 200 watts input, it pulls about 20 amps. Receiving, about 1.5 amps,
or 1.2 amps, squelched.

Later in the manual, it says for battery power, you can go with 12 to
15 volts.

It also mentions that anything over 15 volts may damage the rig.

Thanks for the info. I was hoping it would be legal for MURS, but at
least it will make a good backup rig. I will look on the Vertex site.

Hi. Is it possible to purchase ONLY the programming cable? If so,
where can I pick one up? I saw on the Vertex website several different
programming cables, but none for the FTL-2011 radio. If it is cheap enough,
I will just buy it. If it is fairly easy to make the programming cable,
where can I get instructions on how to do so? Thanks for your
time/patience.

Adam

A fully charged NiCd battery, in good condition, usually tops out about 1.4 volts. If you charge up a string of 12 batterier, this will reach about 16.8 volts; definitely has the potential to damage your radio.

Even a string of 11 can be fully charged to 15.4 volts.... still risky to your radio. If I had no other battery options, I'd go with a string of 10. Fully charged they'll reach 14.0 volts, and probably rapidly drop to 12 volts (1.2 nominal volts per cell) shortly after you begin using them. This is a bit on the low side, but at least safer.

Personally, I'd go with a nice Lead Acid type 12 volt battery. Your 4AH cells are way too low current capability for that IC735 Transmitter,anyway.

To the people who use the 120/240 V centertapped system, -i.e. in North America, it is a single phase 3 wire system or the Edison system (as he developed it for DC) . However, to those outside this region (who don't use the system) it is often called 2 phase.
There is some logic to this as 3 phase has 3 voltages, 120 degrees apart, 4 phase has 4 voltages (yeah I know it is "2 phase") 90 degrees apart. 6 phase has 6 voltages 60 degrees apart so it follows that 2 phase should have 2 voltages 180 degrees apart.
Logic is not necessarily meaningful in life so that the single phase/ 3wire nomenclature is happily used where this system is used (to the confusion/annoyance of Brits and those from OZ) and 2 phase is often reserved for two voltages 90 degrees apart as in some motors. This is on the basis of "those who use it get to name it"

Hi Francesco and all,
IMHO the antenna employs the braids of the twin coaxes as a
counterpoise, i.e. the missing dipole arm. If both the boxes were
placed tightly adjacent to each other with no grounding and the
outgoing (single) coax was equipped with a RF choke, the antenna would
be probably quite poor.

BR from Ivan

This responce is to both Bob and Ed...

Actually my plan is to parallel at least 2, if not more, of these nicad batteries together...

With your comments I think I may start out at 10 cells....

Thank you, muchly, for your input....appreciated...

First I've heard of an "accessory port" vs. a lighter rerceptacle. Do
you know if those are available as aftermarket items which can be
installed separately from the usual lighter receptacle?

That's it! That's the plug I borrowed from my buddy. So he didn't get
it at a truck stop after all. I'm outta here for the neighborhood
Radio Slack!

Tnx Andy!

I have the following items for sale that are excess to my needs. Prices
do not include shipping. I will ship overseas.

Gonset Communicator III - 6 Meters.....$75 plus shipping
This is a separate receiver and and crystal controlled transmitter from
the 1950's . Unit works but needs dial cord restrung on receiver.
Includes a bunch of crystals. The radio has a number of scratches.
http://members.cox.net/radiostuff9/gonset_comIII_6m.jpg
http://members.cox.net/radiostuff9/gonset_comIII_6m2.jpg

Lafayette HB-76 VHF Receiver.....$35 plus shipping
This is a VHF receiver from the 1960's that covers 152-174 MHz. The
unit is in excellent condition cosmetically and does work.
http://members.cox.net/radiostuff9/laffvhf.jpg
http://members.cox.net/radiostuff9/laffvhf2.jpg

Signal Corps U.S. Army Test Set Frequency Meter Test Set I-129-Bï¿½ï¿½ï¿½.$125
plus shipping.
Military set of James Millen wattmeters covering 1.5 to 40 MHz. Case
manufactured by Hickok .Excellent condition
http://members.cox.net/radiostuff9/wavemeters1.jpg
http://members.cox.net/radiostuff9/wavemeters2.jpg
http://members.cox.net/radiostuff9/wavemeters3.jpg
http://members.cox.net/radiostuff9/wavemeters4.jpg

ZM-3A/U Capacitance Analyzer.....$75 plus shipping
Nice unit, works well, new power cord. Insides look like new. Don't have

a manual , however they are available from several sources on the
internet
http://members.cox.net/radiostuff9/zm32.jpg

Book - "The Portable Radio in American Life" .....$25 plus shipping

This is a 260 page book published in 1991 covers the
history of portable tube radios and transistor radios from the 1920's to

the 1970's. Includes historical information on Sony, Zenith radio,
Admiral radio and many other brands who built portable radios. This is
an excellent reference book if you collect portable and transistor
radios. These are new books. This is a great radio reference book. I
have 3 of these books left.
http://members.cox.net/radiostuff9/portableradiobook.jpg

Set of crystals for the Navy TDQ transmitter...$75 plus shipping
Their are 24 crystals of which 23 are the original Navy crystals; one

crystal is not. The wooden box is in great shape also.
http://members.cox.net/radiostuff9/tdq_xtals.jpg
http://members.cox.net/radiostuff9/tdq_xtals2.jpg

Sonar LP Filter - NIB E.F. Johnson Clone.....$40 plus shipping
This looks like a clone of the EF Johnson low pass filter however it has

a neat chrome finish. This is new in the box with instructions and
mounting brackets. This is a 52 ohm filter that will handle 1 KW from
2-30 MHz.
http://members.cox.net/radiostuff9/sonar_lp_filter.jpg

National Type MCN Vernier Dial - New in Box!.....$40 plus shipping

http://members.cox.net/radiostuff9/mcn.jpg
http://members.cox.net/radiostuff9/mcn2.jpg

Drake ML-2 Marker Luxury 2 Meter Transceiver.....$60 plus shipping

This 1971 2 meter transceiver has a solid state receiver and a tube
final putting out 10 watts plus. Also has a built-in AC/DC power supply.

This one is in nice condition and works well. This one has the original
crystals for 34-94, 94 Simplex. For more info on this radio visit this
link: http://www.dproducts.be/Drake_Museum/ML2.htm
http://members.cox.net/radiostuff9/drake2m.jpg
http://members.cox.net/radiostuff9/drake2m2.jpg
http://members.cox.net/radiostuff9/drake2m3.jpg

Thanks for looking.

Years ago, in another life, I worked in radio. There was a small test set that measured RF so that the station engineers could tell the contours still matched the promise of performance. Can't remember what they were called and who manufactured them. Anybody?

They were in a beige case with a meter on the front and were fairly BIG $.

Potomac Instruments FIM series were that color. The earlier ones went
under their name and Nems Clarke, RCA, Vitro?, maybe some others. They
were good radios. Still have two of them around somewhere.

Field Intensity Meter or a Field Strength Meter or an EMI Receiver.

Beige case (maybe one for meter and one for the power supply?), big $ =
Stoddart NM series meters.
Same, but gray crinkle, bigger (but only one) box, big $ = Empire NF-105
meter.
Really, really big case, microwave, pale green & beige, really big $$,
Polarad FIM meter.

OTOH, hand-held beige, modest $, maybe a Narda power density meter (did it
have a separate hand-held wand?).

My '99 Dodge PU has one, plus a lighter jack. They look similar but the accessory jack is fused higher and, unike the "lighter", isn't on the ignition switch circuit. Works great to power different 50W 2 meter and dual-band rigs. There's also a place in the armrest for your packet station (c:

As my old brain remembers they were regenerative, fair size meter on the
front, well made case with rounded corners, the size of a lunchbox and
stored in a wooden box. I think Potomac Instruments may be the one.
Now there's just finding one. ;-)

I use an FT-3000 in the work vehicle, and it displays the voltage when first turned on. With the cig lighter, it shows around 12v. In the aftermarket accessory port, it shows over 14v.

And a good thing about the Radio Shack website is now you can look up an item,
type in your zip code, and it'll tell you if that item is in stock in any of
your local Radio Shacks! :)

The Potomac FIM-41, which covers the broadcast band, is see on Ebay
from time to time. There was another one with broader coverage that
I've never seen for sale anywhere. Those might even be considered
rare. Still a ton of 41s and the older ones still in use by AM
directional stations. I've got two of them sitting right here but I
don' want to open them up. Best I recall they are just standard
portable radio type superhets without AVC.

## 453. FS: FTS 5060 Cesium Frequency and Time Standard

Newsgroup: rec.radio.amateur.equipment

Source record: 23956

For Sale: Ameritron AL-811. EXCELLENT condition and seldom used.
Stock.(No ten meter modification) No trades. Selling cuz I've gotten
interested in vhf/uhf weak signal operation. I'd include a photo, but
it looks just the one you've got in your AES catalog. No dents, no
scratches, and I'm a non-smoker. Manual, and I'm almost 99% sure I've
got the original box in the garage.
$450 double boxed, shipped and insured. First e-mail gets it.

I agree with that. Plus, if that guy plans on using the IC-735 transmitter at anywhere near its full power capability, even 2 4.5AH batteries paralleled would be insufficient current capability. I don't understand why someone would want to go to such lengths to use a bunch of NiCd cells when the cost of a small automotive or motorcycle 12V lead acid battery isn't that much, and would work much better.

Ed

## 462. Swap:my HW-101 station for TS-520

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-17 02:19:47 UTC
From: Steve <zarco@sonic.net>
Message-ID: <7Z0Ob.9143$XF6.191029@typhoon.sonic.net>
Source record: 23965
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hi Gang,
I know there are lots of folks here that prefer the older tube equipment. I'm looking for a Kenwood TS-520 as a back-up rig. I have;

HW-101, works well but needs new electrolytics, front panel has NO scratches or dents, cabinet has some scratches. Manual and CW filter included

SP-600 and HP-23B speaker/power supply and cable

Heathkit Power/SWR meter (HM-102?)

solid state keyer (not Heathkit)

I'd prefer a Kenwood TS-520 but will consider a TS-820. Must be in good cosmetic condition and complete. Minor technical problems are OK as long as you tell me what they are upfront. Plus or minus cash as condition warrents.

I'm located in Santa Rosa, CA. which is 50 miles north of San Francisco.

Steve W6SSP

Even that won't last too long. Myself, I wouldn't bother with those
small batteries unless you only plan to be on for a short time. Even
if you used 10 of the 7 amp/hr batteries, thats only 70 amp/hrs. Not
really too much for a 100w out HF rig. You have to worry about the
voltage drop/stability also, which BTW , Icoms are picky about.. Might
run the smaller 2m radio ok though..I use lead acid batteries for 100w
HF rigs. Preferably deep cycle, but a car battery will do fine as long
as you don't let it discharge too much to damage it. I run my ic-706
on a car battery and automatic charger here in the house.

Message-ID: <xr9Ob.47624$I05.1053245@twister.tampabay.rr.com>
Source record: 23969

Hi
I do repairs specializing on the Kenwood TS-940, TS-930, TS-850 radios. Complete rebuilds from top to bottom, PLL repair and power supply updates, I have over 6 + years experience with these radios. Also Yaesu FT-102, FT-990, FT-767, FT-757,FT-1000D, FT-1000MP... Completely satisfied customers and many references.....Very reasonable rates, fast turn around time. I also do mods for SSB audio and filters... Work on other Kenwood and Yaesu models too !! If you need a repair or a custom modification done give me an email

thanks John, KI4NR
ta7069@yahoo.com

## 468. Problem with Ten Tec 1340 qrp

From: gil <gilpi@NOSPAMmindspring.com>
Message-ID: <daaOb.11951$i4.10005@newsread1.news.atl.earthlink.net>
Source record: 23970

Just got a TT 1340 40M qrp rig and cant seem to get it to tune, swr is way up and there seems to be lots of oscillation going on in the rig. Power out is about 5 watts and the reflected power is just as high.
Both long wire antennas tune fine with all my other rigs, except the 1340.
Any comments?
Thanks......Gil

>Thanks......Gil

Have you tried calling Ten Tec? They were fairly helpful in getting my
1320 going.

Also, you might look at this guy's pages:
http://www.io.com/~n5fc/tt1340.html

His 1340 was unstable into a long wire; stable when he switched to a
balanced antenna. Maybe you just need a different antenna. (I'm
running my 1320 into a multiband dipole, tuned through a tuner, and
have no problem with swr.)

> Any comments?
> Thanks......Gil
> --
> Hi Gil,
VSWR is a function of the load, not the TX . Have you tried a 50 Ohm dummy
load? Next try an antenna that has a native 50 Ohm impedance- that is one
that does not require a tuner. If it appears to have a hi VSWR, then indeed
the rig's PA may be putting out spurs on freqs other than the desired
frequency. At these spurious frequencies, the antenna will have a hi VSWR
and thus your readings.

Hi Steve

no worries =)

i'm looking for a bandpass filter, it's for a school project.

we are suppose to build a remote control vehicle and the comms modules used
are the T5-434 and R5-434.

from the datasheet, it says that the receiver has a SAW filter. So is there
a need to have another one?

thanx!!

> TNX a bunch, Brian W3RV

I've given up on cigarette lighter plugs and am converting all of my 12V stuff to Anderson PowerPoles. Just yesterday I've bought a car charger and one of those portable auxiliary starter batteries and the first thing I've done to them was adding a set of PowerPoles. In my car I have them also as my HAM power supply in the shack.

From: Winston <win@here.com>
Message-ID: <nl6m00peksamf2v6899jacpscecp898q4l@4ax.com>
Source record: 23903

I powered up my old TS-930 S yesterday and there was no RX. TX operation appears to be normal. It seems that I have lost signal somewhere between the front end and the detector. I suspect switching or something in the RF section. I have no meter readings in receive.

For some reason the power supply and final fans are also not running. I think that I remember that one of those fans would come on at power up.

Any ideas?

Thanks.

Win/W0LZ

Source record: 23906

Does the internal calibrator work?

If so check the RX antenna switch beside the coax connector. It's easy to
switch it when removing or replacing the coax.

Neither fan operates at turn-on, both are temperature controlled.

Hello:
Anyone who might have an inoperable xcvr unit...
I am looking for the Mode Circuit Board for a FT-757GXII (1" x 1/2")
6 LEDS (5 Green 1 Amber) intact on the board with 7 colour coded wires
and end connector would be great
Thank you,
John VE3FDK
Hamilton, Ontario. Canada

# 509. FS MOTOROLA RADIOS HT1000'S , VISAR'S ,& MAXTRAC'S

MOTOROLA RADIOS for Sale!

HT1000 Radio (Model HO1SDC9AA3AN) Description: UHF , 16 Channels, 4
Watts, Emergency Button, 3 Position Toggle Switch, plus many more
features. Nice looking radios, that are perfect for:
Work/Business, Health Care Industry, Fire & Safety, Hotels, Resorts,
Entertainment Complexes, Schools & Security and Great for Radio Rentals!
Radio w/Antenna only Prices:
(1) One @ $135. plus shipping
(5) Five @ $130. each, plus shipping
(10) Ten @ $125. each, plus shipping

Radio w/Antenna, Battery and Charger Prices:
(1) One @ $175.00 plus shipping
(5) Five @ $165.00 each, plus shipping
(10) Ten @ $150.00 each, plus shipping

Radio w/Antenna, Battery, Charger & Lapel Microphone Prices:
(1) One @ 210.00 plus shipping
(5) Five @ $175.00 ea, plus shipping
(10) Ten @ $175.00 ea. plus shipping

VISAR RADIO (Model:) H05SDD9AA4DN Description: (UHF) w/ 16 Channels, 4
Watts, Display Screen on Top,
plus Many more Features. Nice looking radios, that are perfect for:
Work/Business, Health Care Industry, Fire & Safety, Hotels, Resorts,
Entertainment Complexes, Schools & Security and Great for Radio Rentals!
Radio w/Antenna only Prices:
(1) One @ $125.00 plus shipping
(5) Five @ $110.00 each, plus shipping
(10) Ten @ $100.00 each. plus shipping

Radio w/Antenna, Battery & Charger Prices:
1 @ $175.00 Plus shipping
5 @ $155.00 each plus shipping
10 @ $140.00 each plus shipping

Radio w/Antenna, Battery, Charger & Lapel Mic Prices:
1 @ $200.00 plus shipping
5 @ $175.00 each plus shipping
10 @ $155.00 each plus shipping

MaxTrac Mobile Radio (Model:)D44MJA7JA5AK . Description: UHF, 32 Channels,
45 watts 449-470 Freq range .
5 button front with display 16 pin acc plug . Scan plus many more
features.These are really nice radio's that are

perfect for people that are on the road a lot, as in the Deliveries of goods & services,
Utilities, etc. .
Radio w/Microphone only Prices:
1 @ $135.00 plus shipping
5 @ $110.00 plus shipping
10 @ $100.00 plus shipping

Radio w/Microphone, Plug and Bracket Prices:
1 @ $175.00 plus shipping
5 @ $150.00 each plus shipping
10 @ $135.00 each plus shipping
If you need a larger quantity, please email me & I will work out a price for you. You can also email your phone number if you would like for me to call you.

I accept Cashier's Checks, Postal Money Orders and PayPal.

These are really nice radios. I also sell them on eBay ( for more $) and have had a lot of positive feedback on these radios (my name is "searchking"). A lot of the radios have a decal on them that lists the channels & identification. The decals come off easily (I use WD40). I just do not have the time to clean the radios , so that's why I offering them at these low prices.

Thank You for your time and I look forward to doing business with you!
John 904-631-1809 ucon@bellsouth.net For more info..

## 510. Serial keypad for the Yaesu FT-817

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-19 06:15:49 UTC
From: IT9XXS <g.mazzola@tin.it>

Source record: 23912
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space

Hi,

I made a simple PIC-based keypad for the FT-817.

With a 16-buttons keypad it makes you set the frequency, change mode (AM/FM/USB/LSB/CW), VFO (A/B), repeater shift (+/-/simplex) and split.

You can find the project on my website at http://www.qsl.net/it9xxs

The firmware for the PIC is free to any amateur radio operator, for non-commercial purposes only.

Best 73s,

Giovanni IT9XXS

## 511. Globe Star CB radio -- need manual, schematic, service info, etc

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-19 13:15:59 UTC
From: i_hate_spam@so_dont_send_me_any.com
Message-ID: <jMQOb.498$b77.797@dfw-service2.ext.raytheon.com>
Source record: 23913
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

I picked up an old tube-type Globe Star CB radio at a surplus electronics store this weekend. Looks like it's all there and nothing's fried. It came with the power input connector, but it's an empty connector. There is no Sams Photofacts book on this model. Do any of you fine folks have any documentation on this model? At the very least, I'd like to know how to wire the power connector for 115 VAC operation.

Thanks and 73,
Dean K5DH

## 512. Re: TS-930 s No Receive

Clif, it is not the RX antenna switch. Not sure where the internal calibrator is? I may be in Plano in the next few months. Not sure at this time. If so, and this is not resolved, I will give you a call and see if you think it is worth fixing. Great pics on your web site. Thanks.

Robert, the big hammer is my second choice. Have a backup and am going to replace the rig before the next sunspot cycle arrives anyway. Would replace it now but am afraid the technology would take a light years jump in the next four years. Now if I could get a 1000d at half price, or something like that, I would reconsider.

Heck, you're even too late for the African Santa (Kwanza) and the Russian Christmas. You do have one hope left before Christmas again... well 2 or 3 maybe. One is the Easter Bunny brings one in your basket OR maybe a birthday or anniversary - depending on when your birthday is and if you do celebrate an anniversary! So, there is still "some" hope. MNS.

Is that a three channel, xtal controlled set...about a foot wide, but only a few inches tall? If so, the schematic was in the first Sams CB book (soft-bound large format book style, not a folder) which they put out--CB-1, IIRC. It's been 40 years, but I had one 'back when' if it's the same one.

Assuming a lot, I can say:
Not familiar with "T5-434 and R5-434." I assume they are small modules -
434 Mhz Tx & Rx.
School project - elementary, high, univ. For elem. & High :

For this, I'd start simple and have no filter. Let the antenna do that. If
you don't have really stringent requirements (my assumption) all should be
ok.

If I remember correctly..it was also called a Globe-100. I remember it like
the other person said, about 12-24 inches wide, dark blue and when you
changed channels a lamp moved to indicate channel 1, 2 or 3...Eddie

Anyone have one for sale??

## 522. FT-101e neutralization question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-20 01:05:19 UTC
From: gil <gilpi@NOSPAMmindspring.com>
Message-ID: <j9%Ob.15764$q4.2028@newsread3.news.atl.earthlink.net>
Source record: 23924

Just recently got a Yaesu ft-101e that needed some alignment and the only thing I cant seem to get "accurate" is the neutralization, the best I can do is to rotate the adjustable plate capacitor till I get the lowest output reading on the power meter, which range from 50 to 80 watts depending on the band and it seems to put out a clean signal this way.
Trying to get a higher output reading by adjusting the capacitor only sends the finals into oscillation with lots of hum and a somewhat "dirty" signal.
Am I on the right track here or should I do something different?
Any info appreciated....thanks

Gil n2wjw

## 523. FS NOS 7036 (6BE6)tubes

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-20 01:31:13 UTC
From: Larry Saletzki <wa9vrh@mtco.com>
Message-ID: <rs%Ob.5401$5M.135419@dfw-read.news.verio.net>
Source record: 23925
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

For Sale NEW 7036 (6BE6) tubes.
The boxes have the following information on them:
5960-00-074-4833 ELECTRON TUBE
1 EACH DLA900-82-G-0017-005
A-3/83 GE-7036 GENERAL ELECTRIC CO. Tubes are 5 to a sleeve.
The 7036 is electrically the same as the 6BE6 but it physically
taller. It is the same height as a 6AQ5 so tubes shields will
not fit from a 6BE6.
$10.00 per sleeve plus $3.85 priorty mail shipping U.S. locations only.
1-4 sleeves $3.85 priority mail shipping
4-8 sleeves $7.70 priority mail shipping
Thanks Larry WA9VRH

I am looking for an HP frequency counter for my work bench.
I would like to find an HP 5328A or similar in good working condition with
the 500 Mhz or better prescaler / channel C option. Pluses would
be the high stability option and the DVM.

I am tired of fighting eBay trying to get one.

Please advise condition and price.

# 528. Re: TS-930 s No Receive

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-20 04:24:57 UTC
From: Mark Russo <rmrusso1@optonline.net>
Message-ID: <400CAE93.B50D6B02@optonline.net>
Source record: 23930

HI, I could be wrong here but what the heck.
My Yaesu FT-102 had the "no receive" problem at one time.
What I found was a tiny "grain of wheat" lamp in the receiver
which acted as a fuse to protect the receiver form spikes coming in.
I changed it and wala, the receive was back.
The TS-930 is of the same vintage as the 102.
Good Luck!!

Nope, the Star is not even similar to that one. The Star
is a 5-channel unit about 8 inches wide and 4 inches tall.
It's unlike any of the models that Sams covered in their
Photofacts books (I have a good library of early Sams CB
manuals, by the way).

73,
Dean K5DH

## 532. <<NEED INFO>> Atlas radio question?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-20 17:27:53 UTC
From: w0cbf@yahoo.com
Message-ID: <648b97c1.0401200927.2240b48a@posting.google.com>
Source record: 23934

Recently, I saw (on eBay) an Atlas 210M transceiver. I have owned
210X's in the past but I am not sure what the "M" in the 210 model
number stand for. The unit, at least from the fron panel, looked
exactly like the "X" model.

If you have any info on the "M" model please post.

Thanks and 73's
Chuck

# 538. FS: Gonset, Eico, Millen and More

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-20 20:32:53 UTC
From: Dave Hollander <n7rk@cox.net>
Message-ID: <400D9075.9321C9FC@cox.net>
Source record: 23940
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I have the following items for sale that are excess to my needs. Prices

do not include shipping. I will ship overseas.

Gonset Communicator III - 6 Meters.....$75 plus shipping
This is a separate receiver and and crystal controlled transmitter from
the 1950's . Unit works but needs dial cord restrung on receiver.
Includes a bunch of crystals. The radio has a number of scratches.
http://members.cox.net/radiostuff9/gonset_comIII_6m.jpg
http://members.cox.net/radiostuff9/gonset_comIII_6m2.jpg

Eico 717 Electronic Keyer.....$50 plus shipping
This keyer was designed to match the Eico 753 transceive from the
1960's. The keyer needs some work. The unit comes on and works
momentarily and than dies which would indicate a defective component or
tube. Includes a copy of the manual.
http://members.cox.net/radiostuff9/eico_keyer.jpg
http://members.cox.net/radiostuff9/eico_keyer2.jpg
http://members.cox.net/radiostuff9/eico_keyer3.jpg

Leader LAG-53 Audio Generator .....$25 plus shipping
This unit will generate both a square wave and a sine wave. Covers 20 Hz
to 200 kHz with adjustable level. The unit works well and is clean and
unmodified inside. It is missing the handle on the top of the case. This
unit matches the Leader LSG-11 RF Signal Generator
http://members.cox.net/radiostuff9/leader_audiogen.jpg

Signal Corps U.S. Army Test Set Frequency Meter Test Set I-129-Bï¿½ï¿½ï¿½.$100

plus shipping.
Military set of James Millen wattmeters covering 1.5 to 40 MHz. Case
manufactured by Hickok .Excellent condition
http://members.cox.net/radiostuff9/wavemeters1.jpg
http://members.cox.net/radiostuff9/wavemeters2.jpg
http://members.cox.net/radiostuff9/wavemeters3.jpg
http://members.cox.net/radiostuff9/wavemeters4.jpg

ZM-3A/U Capacitance Analyzer.....$75 plus shipping
Nice unit, works well, new power cord. Insides look like new. Don't have

a manual , however they are available from several sources on the
internet
http://members.cox.net/radiostuff9/zm32.jpg

Book - "The Portable Radio in American Life" .....$25 plus shipping

This is a 260 page book published in 1991 covers the
history of portable tube radios and transistor radios from the 1920's to

the 1970's. Includes historical information on Sony, Zenith radio,
Admiral radio and many other brands who built portable radios. This is
an excellent reference book if you collect portable and transistor
radios. These are new books. This is a great radio reference book. I
have 3 of these books left.
http://members.cox.net/radiostuff9/portableradiobook.jpg

Set of crystals for the Navy TDQ transmitter...$75 plus shipping
Their are 24 crystals of which 23 ( a few duplicates) are the original
Navy crystals; one crystal is not. The wooden box is in great shape
also. Here are the frequencies all in MHz: 5.80,12.90,13.10, 13.26,
13.50, 13.74,13.75,
13.82, 14.02, 14.02, 14.30, 15.62 ,15.64, 15.66, 15.68,15.78,15.84,
15.85, 15.86,15.86,15.86,15.92,15.92, 16.00, 16.24
http://members.cox.net/radiostuff9/tdq_xtals.jpg
http://members.cox.net/radiostuff9/tdq_xtals2.jpg

Sonar LP Filter - NIB E.F. Johnson Clone.....$40 plus shipping
This looks like a clone of the EF Johnson low pass filter however it has

a neat chrome finish. This is new in the box with instructions and
mounting brackets. This is a 52 ohm filter that will handle 1 KW from
2-30 MHz.
http://members.cox.net/radiostuff9/sonar_lp_filter.jpg

Drake ML-2 Marker Luxury 2 Meter Transceiver.....$60 plus shipping

This 1971 2 meter transceiver has a solid state receiver and a tube
final putting out 10 watts plus. Also has a built-in AC/DC power supply.

This one is in nice condition and works well. This one has the original
crystals for 34-94, 94 Simplex. For more info on this radio visit this
link: http://www.dproducts.be/Drake_Museum/ML2.htm
http://members.cox.net/radiostuff9/drake2m.jpg
http://members.cox.net/radiostuff9/drake2m2.jpg
http://members.cox.net/radiostuff9/drake2m3.jpg

Thanks for looking.

According to a guy on the 210x/215x Yahoo! group, the "M"
indicates the rig is set up for MARS operation (same rig
as any other 210x, but the band coverage is shifted).

No, Robert. I paid full price. Now if I can just save my marrage....
Not sure what I will do with the 930. I am going to try a few more
things to get the receive up. If I could, it would make a good backup.
It really is a good old machine. I will keep you in mind if I decide
to abandon it. Maybe one of those Canidian snow birds down in Texas
could pick it up for you on their way home. LOL My e-mail is
win@winlyn.us. Drop me an e-mail and let me know your call so I can
figure out where you are. I am in Southern Missouri on Pomme de Terre
Lake. I fish and ham for a living these days.

I have a number of HP counters available from the HP 5300 series and
one from the 5380 series. Some can count to 500 MHz, and above. I also
have DMM modules available in the 5300 series. These are smaller
modular counters with accuracies better than 1 ppm. Email me for
specifics if you are interested. Prices are very reasonable,
considering what you will get.

I have the following items for sale that are excess to my needs. Prices
do not include shipping. I will ship overseas.

Johnson Viking 275 Watt Matchbox..... $175 plus shipping
This antenna tuner will match antennas with a coaxial fed, open/balanced
wire and end-fed antennas. This unit still has the T/R relay inside
also. This unit is in nice condition with no extra holes or connectors
added. Includes a copy of the manual.
http://members.cox.net/radiostuff9/efjmatchbox.jpg
http://members.cox.net/radiostuff9/efjmatchbox2.jpg
http://members.cox.net/radiostuff9/efjmatchbox3.jpg

TenTec Model 228 Antenna Tuner and SWR Bridge .......$100 plus shipping
This is a 200 watt Antenna Tuner and SWR Bridge covering 80-10 meters.
This unit will match balanced and unbalanced lines, coaxial lines and
single wire antennas. The built-in switch will allow the user to
switch between three antennas and an external dummy load. This unit is
in excellent condition and the LC networks inside show no abuse or
arcing. The meter has the ability to be lit with the use of an external
12 volt dc supply.

## 552. Speaker for Motorola Saber -- how to use?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-21 13:43:19 UTC
From: Ken <cprstn54zz@att.net>
Message-ID: <rsus00t2jgvup00h95a71qkdk4a27nce8n@4ax.com>
Source record: 23753

I bought a new Motorola 12 watt mobile amplifying speaker on eBay, no. NSN6054A, to use in my car to amplify my non-Motorola handi-talkies.

Turns out that this speaker is part of the now discontinued Saber radio system. It has a DB-25 connector with 7 pins present: four for 12 VDC power, 2 for audio and one for squelch.

Attempts to query Motorola have been futile.

(1) The spec sheet says it is made to work with the Vehicular Adapter, which has a volume adjustment on it, so you don't have to change the Saber's volume setting from what you like for pedestrian use. What does this mean as far as what the speaker expects as the speaker level voltage inputs? Will I be OK I set my HT volume knob to, say, half way?

(2) The squelch signal is used to reduce power consumption. The specs do not indicate what the squelch signal looks like. Anyone know? Inasmuch as my HT's do not generate a squelch output (not counting an LED being off), I want to force the speaker squelch to off.

3) Should I just rip out the fat DB-25 cable and connector and put standard leads on the speaker? Or is there some demand for the thing as is, so I could sell more easily it if I don't need it?

<snippety>

Ken, I think your best course would be to put this same query to
the nice folks at the Batlabs 'BatBoard.'

http://batboard.batlabs.com

It's a messaging system that is populated by several thousand
Motorola geeks. If anyone will have the answers you seek, it will be
them.

I can tell you that what Motorola told you is pretty much true.
Mother 'M' has gotten much worse, in recent years, in terms of
preserving documentation and parts for older gear.

Happy hunting.

Yea, that's normal. The power switch is electronic, meaning the circuitry is always watching it to see if anyone has pushed the power switch. It has to use a little currect to do this, not much, I suppose less than a milliamp, but
it will drain batteries eventually.

Hi, John,

I would be happy to help with that, as I'm a Motorola reseller.

The charger you refer to is part number NTN-1177E, and is a six-
pocket unit. Motorola list price on these is $788.00 Ea.

I can sell them to you at $665.00 Ea. plus shipping. This
represents a savings of $123.00 per unit. If you buy six of them, you'll
have saved $738.00.

Please let me know what you'd like to do.

Well, an electronic power switch doesn't _have_ to draw current with the power off (I've done it), but it's certainly _easier_ to design if you allow that.

Have you checked that it isn't just the batteries aging?

If it has a clock that would drain the battery. You should be able to design a clock that works off a bitty little watch battery for over a year, and consume significantly less current that the batteries natural self-discharge rate, but perhaps the saved a few pennies by using the on-board microprocessor instead of a dedicated low-power clock chip.

This is a CW only rig. No-coders can leave now. It has new finals and bridge rectifier. Works very well. All aligned and ready to go. PTO is smooth and all functions work. Has some scratches on the case but not in bad shape. 28W on 80 and 22W on 10 max. What have you got to offer for trade?

Hi OM,

In order to complete a long article dealing with the lightning protection under construction for my website, I am searching quality images (JPG) showing installations of surge protectors (PolyPhaser, etc), single ground point, external grounding system, etc, preferably close-up pictures.

Of course as for all material published on my web, these images will stay under your name with a link to your website if relevant.
Contact me using my post form on my website at
http://www.astrosurf.com/lombry/post.htm.

Thanks in advance for your cooperation.

Thanks guys for the replies. I probably should conduct a real test
using alkalines fesh out of the box and test voltage before conducting
it. Its the only way I'll know for sure that the drop is consistent. I
put in 8 new AA eveready alkalines(not Energizer..could have been
issue) and they were down to 8V after 10 days in the radio. Next time
I'll put Energizers in there..(cheap enough these days). I'll also

later..test it over a longer term using a 4ah SLA at a known starting voltage. Then I can look at it over a few weeks..taking into account any normal discharge in the SLA. thanks again for your comments.

## 573. WW II Crystal radio - army surplus

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-22 22:29:15 UTC
From: Redbear_1934@juno.com
Message-ID: <cc21819c.0401221429.54038481@posting.google.com>
Source record: 23775

May years ago my father gave me a small army surplus radio that was a little over 3" long and about 5/8" square and it had a small rod protruding from one end and a wire attached to an earplug from the other end. It was an AM radio crystal set and I spent many hours listening to the AM programs at night in my bed. One "tuned" stations by moving the rod in and out. Does anyone remember these and is it possible to find one now?

## 574. Re: Alkaline battery drain on FT-817, even when off

Most electronic devices use power even when off. Why? Because they're not really off. That "on/off" switch is merely a low current device that tells the computer to turn things off, or on. But the computer must always have power applied so that it can perform this function. Not a lot of power to be sure, but power anyway. Same for computers that are left plugged in to a live outlet.

Frank Olaughlin wrote:

The 817 is a known consumer of electrons whenever they are available. It will drain a set of AA cells in short time even when turned off. The idea of measuring the current on the radio with a milli amp meter is an excellent suggestion.

If you are interested, there is a group at Yahoo.com that is focused on the 817. There are discussions of problems, enhancements and experiences with the radio on this forum. There are also files relating to the radio and software that is useful to help operate it from a computer. Can one say memory backup for the radio?

Go to www.yahoo.com and click on groups. Sign in and do a search for 817. It should show one or two or several groups there.

>

There is no intent to test the users ability or knowledge, and that is not the reason for requiring a license for GMRS (or business, public service, special emergency, etc.).

As a licensed service, GMRS allows use of higher power radios (up to 50 watt transmitter output), as well as gain antennas, repeaters, etc. Requiring a license (and identifying when transmitting) allows identifying and tracking down a station which causes interference, necessary when you start using higher power, gain antenna, etc. The license also provides any restrictions or conditions on the use of the radio. For example, two of the GMRS pairs are not allowed to be used within approximately 75 miles of Canada - and that is clearly stated on the license when you get it (and in the regulations if you bother to read them). And NO GMRS frequencies are legal outside of the U.S. - you can't take a GMRS radio to Canada or any other country and legally use it, even though Canada does recognize FRS.

Tests done on most of the bubble pack GMRS/FRS radios show they do not produce any higher effective radiated power on the GMRS frequencies than on the FRS - what they are giving you is a useless 22 channel radio instead of a useless 14 channel radio. The other issue directly related to the lack of performance is the antenna requirement for FRS (integrated non-removable no gain), which isn't a whole lot better than a dummy load.

Do a "real test" and just measuer the current drain with a miliampmeter.

Hello ,

I have troubles with my Kenwood TS-450-SAT . When i power on the transceiver
i get a cw code and in stead of the frequency i get dots on the screen .
Also i can't receive or transmit .
Anyone know this problem ? Can't find this problem in the manual .

Many thanks ,

Kurt

Hmmm,

My family finds these "useless" FRS radios quite handy.
Additionally, we can use them to the full 2 mile range at times while
snow boarding.
I think FRS and GMRS service has done a fabulous job of filling a
communication needs nitch.

While I enjoyed the information you brought to the subject, I detect
unpleasantness in your attitude. What's up?

phone: 469-766-3551 (cell phone w/voice mail)

<> Yaesu FT-817 transceiver, s/n 0K020304, with all standard accessories, box, manual; with YF-122C CW filter installed; with Maha FNB-72 battery, 9.6v @ 1700 mAH installed; battery charges in radio when connected to DC power; NO DAMAGE OR REPAIR HISTORY; also includes nice laminated quick-reference "cheat sheet".

<> LDG Z-11 antenna tuner, factory assembled, with box and manual; factory option One-Touch-Tune compatibility kit added; external ground binding post neatly added to rear panel; power connector changed to different size of same type (original connector included so it can be changed back); YES, this tuner WILL load an end-fed wire if worked against a good ground or sufficient wire counterpoise!

<> W4RT Electronics One-Touch-Tune module; attaches to Z-11 with Velcro pads; plugs into FT-817 and Z-11.

<> K1EL memory keyer, built by me from a semi-kit, has 4 memories, runs on 4 AAA batteries (included), programmed by inputs from your paddles; built in a tiny Bud box; with interconnect cable and original manual.

<> Boom mic / stereo headset; comfy full-coverage padded earpieces; leather pad on headband; electret condenser mic element; with all necessary cables and homebuilt PTT switchbox; uses stock Yaesu mic cord (which unplugs from the mic head).

<> Homebuilt DC power distribution box; nice long input cable with banana plugs; three separately-fused banana jack outputs.

<> Homemade brackets to bolt FT-817 and Z-11 together; made of lightweight aluminum; uses stock hardware and mounting holes, no mods required to radio or tuner.

<> Homemade tilt stand, made from mobile CB radio mounting bracket, raises front of gear up off table for easy access; non-skid pads on bottom so won't "walk" on you.

<> Very nice padded camcorder case for field transport; entire station fits neatly inside; has storage pockets for everything.

PHOTOGRAPH OF STATION IN USE:

## 595. Re: GMRS Radio Recommendation

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-24 03:21:36 UTC
From: Blank <noone@example.net>
Message-ID: <4xlQb.137200$na.216687@attbi_s04>
Source record: 23797

I will agree completely that both FRS and GMRS serve a useful and specific purpose. I suppose any unpleasantness I showed is with regard to the manner in which radio manufacturers are mass marketing the combined FRS/GMRS radios with range claims that vary from tenuous to ridiculous except under the most ideal of conditions. Further, the radios are manufactured with either a very tiny fine print note about the license requirement, or no notice at all, on the exterior of the package.

Using commercial grade 2-way hand held radios, you will achieve much greater performance (range, audio quality, etc.) than with any of the mass marketed bubble pack radios. That, as well as mobile radios and repeaters, is what GMRS is about.

So, why should you, or anyone else, buy a 22 channel radio (or pair of radios) that only have 7 frequencies you can use without a license? Why not buy a set of 14 channel FRS only radios instead - that gives you twice as many channels that you can legally use without a license? FRS and GMRS share seven frequencies (the first 7, or lower 7 FRS channels). When those channels are incorporated into a combined FRS/GMRS radio, they become GMRS, not FRS, channels, thus they require a GMRS license to use. That only leaves you the upper 7 FRS channels as legally usable in a combined FRS/GMRS radio, unless you obtain a license.

Now the license cost is really not all that much when you consider it does cover everyone in your family (not just your household), and is good for 5 years. So if you have a family of 4, that comes out to about $3.75 per year per person. Even if you are the only person benefiting from the license, it is only $15 a year - less than most people spend on just about anything else.

What I would really like to see is a set of GOOD GMRS radios placed on the consumer market, and a method by which users will go to the effort to get a license. Then they can benefit from significantly better radio communications.

Other viable options include MURS and of course, amateur radio (which is what this newsgroup is supposed to be about anyway). Please, explore all options to solving a communications need. But don't rely upon the manufacturers of mass marketed "bubble pack" radios to provide that solution.

## 597. Kenwood 930 and 440 problems

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-24 03:52:46 UTC
From: Kirk Mohror <kmohror@comcast.net>
Message-ID: <kd6dnUTIne6UcYzdRVn-hw@comcast.com>
Source record: 23799

Let's start with the 440.
I hear that this is a common problem. Sometimes the display will go to all decimal points. What is the cause and what is the correction?
Now for the 930.
While operating, the radio would shut down for a second, did this 2 or 3 times then heard a small snap/crack.....dead. All fuses are good.
The only thing that comes on is the light on the analog meter.
I measured 12vdc and 28vdc at the power supply. The power supply fan turns slow.
I do have the service manual, but there is no schematic for the powere supply.
Any suggestions?

Thanks,
Kirk Mohror

You don't have to pay anybody for them. They are available on the
wonderful BAMA website for download.

Do a search for "BAMA" on Google", go there, click on "Heath", scroll
down to the desired model and download. You might encounter a problem
if you are using Internet Explorer, if so read instructions on the
BAMA website.

The GTX series (portable and mobile) use an EEPROM for their
parameters. They require Motorola-proprietary software (about $265 last
I looked), an appropriate programming interface (a RIB - Radio Interface
Box), and the correct cable to program.

In addition, the stock RSS will not allow the entry of ham
frequencies. It can, however, be modified relatively easily to allow
such.

# 608. Schematic jpeg for Yaesu G-5500 Controller needed

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-24 21:16:09 UTC
From: calvinf15@earthlink.net
Message-ID: <790ed550.0401241316.30cf4462@posting.google.com>
Source record: 23810

Hi Folks,

Can anyone help me by sending me a jpeg or similiar of the schematic page out of your Yaesu G-5500 controller box? I was given an antenna with the rotator attached, yet no controller box. Before I go out and buy a controller box from Yaesu, I thought I'd try my hand at building a controller box with provisions for computer control. I do have both sets of wires coming from each of the Az/El rotators, and I can see all of the colors clearly.

If you can't send a jpeg, perhaps a pointer or two regarding what each wire color is connected to...? Is it really just 24 VAC, or do I have to worry about "split-phase" or things like that?

Additionally, can anyone point me to a project that has been done like this? I found Bob Bruninga's Archer Rotator mod, which looks nice, but not knowing the required drive levels, I hesitate to just hook 24 VAC up the the wires on the controller. I found plenty of articles regarding the computer interface, but I just need to get things turning at this point.

I'd appreciate a direct email, if possible. Thanks,

Calvinf15@earthlink.net

Has the radio been sitting unplugged for a long period? If so , plug
it in for a few days and see if that will bring it back to life.
I had a similar problem on my R-5000 and that was the fix. No
further problems after 7 or 8 years.
Regards

Bob

Hi,everyone. I'm on the hunt for information on the fr-101. I've managed to successfully restart a non working unit and it now receives about half the amount of signal from the antenna/ generator. I have the schematics(thank goodness for that), but need to have the stage gains if possible.

The RF board has been repaired, low receive across all bands, stable VFO and o/p from same, detecting in all modes, attenuation is functional aswell as all other options(rf gain, etc.).

Hope you might have some information.

Thanks for reading,

Lee

Hi,

Was your house/shack stroken by Thor's hammer, I mean a lightning recently ?
I am interested in your experience...

If your installaiton was damaged by a strike event, I would like to now if :
- you used a central ground point bonded to an external grounding system, as well as the home ground.
- you left some gears switched on during the strike event
- you left the TX switched on and the coaxial plugged without protection
- you installed or not lightning controllers in your electric distribution panel
- you had installed another protection
- you swicthed off and unplugged all devices
- you think that the energy came back via the grounding network (probably dut to a difference of potential in a device)

Tell me only in a few words what was the most probable cause of the accident.

At last, if you master the subject, do you really think that a grounding system, as best it could be as the advice provided by PolyPhaser for example, will never protect you against a direct strike on your antenna or on the house lightning conductor
Why ?

All this will help me to conclude the article dealing with this matter :
http://www.astrosurf.com/lombry/qsl-lightning-protection.htm

Thanks in advance

NB. Answer preferably through these forums to please everybody.

Thierry
ON4SKY

I believe lightning struck my chimney and took out the lawn sprinkler
control system and a couple of appliances. After a while I found the
reason. The clamp on the ground rod for the house ground wire had
disintegrated and I think the disintigration was caused by galvanic action.
I just replaced with awhat I thought was a better one and the new one didn't
corrode.

Hi All...

I'm looking to purchase (or trade) a dual band base antenna. Mostly interested in Comet GP-9. Please email me with your price at ve3gop@rogers.com
If you're interested in a swap, I've got a Motorola MRX100 rig with mic, cables and manual (excellent condition). Other items for consideration here are Bearcat BC560XLT scanner, working LORAN-C receiver and Timewave DSP filter (older model).

thanks es 73s

Indeed, without care the binding between two metals is always "at risk".
Polyphaser and other grounding kit manufacturers provide products to prevent
this kind of corrosion, including coating for anchor guys (like Anchor
Guard).

Kurt: I had gone on holidays for about 3 weeks and disconnected
antenna and power. When I powered it up all I got was a line of dots
and no audio. I called a few dealers but none were familiar with the
problem.
Next day I turned it on and I got audio for about one minute but
as soon as I turned the volume up more than half way the dots
reappeared and the audio was dead. Another day went by and I tried
again. This time the radio stayed on and would work normally but an
increase in volume knocked it out again.
On the third day it worked normally and has ever since. I do not
unplug it except briefly to move it from one spot in the house to
another.
I have no idea why this glitch happened.
Hope yours responds as easily.
Regards, Bob

Hi Bob ,

I get the problem more and more , every time when i power on the tx , even
when i turned it off for 1 minute .I will take a look on it and let you know
what is is/was .
If i can't fix it i take it to Kenwood , it's only 20 min to drive .

Many thanks ,

Kurt

Station grounded to central ground (10 foot ground rod in Georgia Clay tied to 60 radials each 60 feet long 1" below the surface put in before the house was built.)

Power unplugged all antennas grounded via the antenna switch.

1/2 of G5RV up 40 feet, antenna vaporized with only bits and pieces found, the other half undamaged. Came in via powerlines and antenna. All electronic devices in the house destroyed

All antennas on 80 foot tower were untouched.

main stroke followed the powerlines in the attic. The overpressure blew vinyl siding off the house.

In the hamshack the voltage exited the coax from a coiled section burning the rug. TS-830 and 440 destroyed in spite of being unplugged. 6 foot color TV, electronic air cleaner, VCR etc all destroyed. The only electronic survivor was a bedside GE $10 radio alarm clock.

This is a rural setting on 29 acres. Closest house 1/2 mile away. All utilities underground from the road to the house. Closest overhead utilities are 1600 feet away.

Yours is simple. Some of the R-5000's have the same potting compound in a VCO as the 440's. By keeping it on all the time you are keeping it dried out and it will work until some of the components corrode in two. If you turn it off the crud absorbs moisture and it won't work.

At a guess. It could be condensation which has dried out when you return
home and restart the central heating ect.

> Was your house/shack stroken by Thor's hammer, I mean a lightning recently ?

My mast has been struck twice in the last 4 years.
> I am interested in your experience...
>
> If your installaiton was damaged by a strike event, I would like to now if :
> - you used a central ground point bonded to an external grounding system, as
> well as the home ground.

My mast is the central ground point. It's tied into to water pipe,
which is about 2 ft away, and also tied into my "ground window"
outside the shack. All the ground here is tied together, and at the
same potential. The water pipe is iron, not pvc.

> - you left some gears switched on during the strike event

Gears???? No compute...

> - you left the TX switched on and the coaxial plugged without protection

Yes. So was my computer and monitor. Neither flinched at all.
> - you installed or not lightning controllers in your electric distribution
> panel

No.
> - you had installed another protection
No.
> - you swicthed off and unplugged all devices
Yes. But to my radios only. IE: rig and amp unplugged from the wall.
Phone line to the computer unplugged. All the other stuff in the
house/room was left on and plugged in.
My computer was on, as was the TV in the room, which is on cable.

> - you think that the energy came back via the grounding network (probably
> dut to a difference of potential in a device)

Most all of the strike energy went straight to ground via the mast I'm
fairly sure.
I had no damage to anything anywhere. The only thing is did was blow a
hole in my electrical tape "water cap" on the top of the mast. Also
made the slightest arc spot on the end of the mast. You would have to
look hard to see it.

>
> Tell me only in a few words what was the most probable cause of the
> accident.

Accident? What accident? The lightning strike did exactly what I was
intending/hoping it would do.
>
> At last, if you master the subject, do you really think that a grounding
> system, as best it could be as the advice provided by PolyPhaser for
> example, will never protect you against a direct strike on your antenna or
> on the house lightning conductor
> Why ?

You can protect from a direct strike. The level of protection will
depend on the clamping voltage of the gas tube, or whatever you use.
The higher power gas tubes clamp at a higher voltage. If you want max
protection use a low power protector. But I'm too paranoid to operate
during lightning. I see no point anyway, being the static would be a
mess... I totally unhook and ground all antennas. Also, my mast is
much most likely to attract a strike rather than my antennas
themselves. They just float along for the ride. My coaxes all run all
the way down to the ground. The mast acts as a lightning rod in my
case. I was sitting 15 feet away from my mast when it struck mine. In
reality, it's kind of a non event..It's so quick , it's over before
you realize what happened. The strike itself is pretty quiet if you
have a low resistance connection like a well grounded mast. About like
throwing a lightbulb on the ground and breaking it. Only the sonic
boom overhead is loud. You also hear a click in your auditory nerves
when you are that close. Lightning has also hit tall trees in our yard
in that time period. The tree in the front yard was nailed a few
months ago. MK

^ > - you left some gears switched on during the strike event
^
^ Gears???? No compute...

"Gear", not "gears". "Gear" is both singular and plural without the
apostrophe but that sense doesn't translate well. He means "equipment".

Don't know if there is a direct holder that will fit, but what I did was 'outboard' a battery holder with a pair of wires. Of course the old holder was removed, and the wires soldered into place. The 'new' holder is tucked in the radio towards the back. To replace the battery, I pull the cover, pull the new holder up and replace the battery and tuck the new battery back into place. This procedure and idea is published on the Web, for a different but similar Kenwood. Can't find it now.

It's a common problem with the 440 not the 450 or the 430, they have none of the potting compound.

A few years ago Icom stopped encoding the serial number. So I don't
think there is any way to decipher the sn. It does not contain any
information other than to identify one individual box.

Anybody have better information please come forward.

What is your fucking problem? I've been reading this forum for years and
I see that Clif provides answers for *free* whenever someone has a
Kenwood question. He's certainly under no obligation to do this.

If you don't like his answer, realize that you got more than what you
paid for, which is $0. As for your foreword (sic), hopefully Kenwood has
better things to do than investigate imaginary complaints from idiots.
Your question on a public forum and his response is *not* customer service.

And, btw, he is absolutely right: how hard *is* it to solder in a
battery every 10-15 years?

Do a search. I just did one on Google for "MLA2500 Linear" and got quite a few.
I have my dad's MLA 2500. Haven't used it yet. What I heard is that you NEVER draw grid current. The tubes are easy to kill and very $$$. There is a site with directions how to modify it for other less $ tubes:

http://www.svetlana.com/docs/TechBulletins/technoteNo14.html

I even corresponded with the W6KT who wrote it. Here's a reference:

The secret to keeping a MLA2500 alive and in good health is to make sure your antenna stays in good condition and doesn't suddenly go defective and unload the amp while it's on the air, and always monitor the grid current while operating. Anytime you see grid current indicated on the meter, STOP using the amp and investigate to see what went wrong. Keeping the grids healthy is probably the most important single thing you can do to keep the tubes in good shape. Those fragile grids won't stand but a very few watts dissipation. Any visibile grid current while operating on the air is too much, whatever the book says. When loaded right (easily done) mine shows zero grid current at full output. Mine 2500 still has the original tubes and they are still at full output. I used it twice this week in a morning 75 meter group because of rotten conditions. (I usually don't need an amp there.)

I have a Fluke 27 whose display does not show some of the segments when it should.
Is this a known problem, and if so, is there a fix that is worth doing???

Thanks in advance.

cheers, Paul - VA7NT - email: paule@sfu.ca

I just pointed out what others have already done. How hard is it to solder in a battery every 10-15 years? I'm certainly not an 'authorized' technician, but I was glad my next door neighbor works on stuff like this. He had the equipment, the steady hands and the eyesight that I don't have. Would I want to do it again? Nope, not without my neighbor. It's very intimidating to take your only rig apart that far, and then wave a soldering iron at it. Those components are really tiny.
But you are correct, Clif, the batteries do last a really long time. My Kenwood was bought new in 1993 and the battery died last year. Hopefully I'll get maybe another ten years out of this battery, and I WON'T need my neighbor's good eyes and hands to replace it :+)).

I am not smart enough to know how to remove the anti-spam. Also, I don't why someone asking for information would not make it simple to get a helpful reply. If I could have replied, I would have told them that the last, the very last, used amplifier to be considered would be a Dentron 2500 A/B. They were great amplifiers in their day, but used ones may have bad caps, and of course, if the tubes are bad, they are impossible to find and when available, one would cost more that your used Henry, Drake , Swan, Heathkit, etc. amplifier.

I worked for Icom from 1989 until 2001 and Never knew the serial
number had any reference to the date of manufacture. The serial number
just identifies the product.

There is usually a version number close to the serial number.
Depending upon the part of the world you live the version number will
be different.

Rip the covers off and look for the most "recent" date
code on the IC's, electrolytics, and other components.
The manufacture date should be within a month or so past that.

Boy, I guess sarcasm only works one way. I never had any intention of forwarding the message or complaining to Kenwood. I just don't understand why someone would reply to a question in that way. I took it as sarcasm. If you don't have an answer, why reply? Just ignore it if you have nothing to contribute. And you are right- it isn't that hard to replace a battery every 10 years, I was just looking for an alternative. These groups seem to bring out the best in people, including myself, don't they?
I apologize for offending anyone. That's all I can do at this point and will try not to do so in the future.

I have a Fluke 79 that had that problem. I was told to disassemble
the meter to the point that the LCD panel contacts could be cleaned.
I did that and it came back perfect. Has been goof for several years
since. If you 27 has a similar display this might fix it.

It don't remember the steps but it is fairly intuitive for someone
with electronic and mechanical skills. The meter was removed from the
case and the LCD panel taken out of it mounting. The LCD panel is
sort of modular with contacts along one side or end. Those contacts
and the contacts they go into were cleaned with alcohol and a soft
cloth.

I think I also used an extra fine rubber abrasive stick I had on them
to brighten them up a little more. That was my idea and it did not
hurt anything.

As that amp has not been made in many years and not that many were sold I would stay away from it mainly due to the tubes. Find an amp that uses some common tubes that are sold at a more reasonable price.

I'm sorry, but I get touchy when it comes to false complaints. I work in field service dealing with different people all the time, and I know it doesn't take much to ruin a good engineer's reputation. One can have a brilliant record with the customers, but sometimes all it takes is a complaint from some jerk who feels he was terribly wronged beyond repair. Very few will write a letter to the CEO telling him how great your service is, but if one thing goes wrong on their bad day (and some of them celebrate Bad Day every day) - you better watch out.

Please leave complaints about service for the proper occasions. Usenet messages are not it.

You might be able to find out by checking the accessories for
each at the Yaesu site. Or just search on the battery model number on
the site and see if it comes up with a list of radios it will fit.

# 676. FT-1000MP Receive Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-27 14:46:03 UTC
From: 3518693@mail.com
Message-ID: <740cebc3.0401270646.36a1800e@posting.google.com>
Source record: 23878

Hi,

I am still looking for any advice on this problem. Thanks much in advance!

I have an FT-1000MP, the original, not Mk-V, not field, vintage is
1999. Recently I have noticed that if I turn the radio on 75 meters,
the receive is low.... until I just tap the mike or key, then the
signals jump up 10-20db, stay there for a while, and eventually, after
4-6 minutes, fade down, until another mike tap is applied. This will
continue all night. Antenna is a resonant dipole. It seems to happen
only on 75/80... preamp problem? should I switch to flat amp setting?
Relay gone south? Suggestions? Fixes?

Thanks,
MW

Here's one for you microwave guys...

I'm looking for any kind of info, specs, etc,
for a Varian model 212MS microwave YIG filter.
The data plate on the unit says it covers the
freq range of 1.8 to 12.4 GHz. It has Type N
connectors for input and output, and solder
pins for the DC control voltage. It came from
an old piece of HP test equipment. Anyone
have information on this filter? I was unable
to find anything on the internet using Google.

73,
Dean K5DH

Ok thanks everyone for their input ... I was under the impression that
the MLA-2500 was a well built amp, and easily modifiable to use less
expensive available tubes.
I'll do some further research.

73,
Clint

Hi all,
I am looking for the schematic for an Icom IC=-271H. I am having a problem with the rf gain and rf power adj. I have the manual, but there is no schematic included. Any help would be appreciated.

Thank You,
Jerry / K2GV

I would not say it is easy , but I seem to remember that in a 73 Magazine
(maybe QST) there was an artical to modify it for one of the single Russian
power tubes. Doubt that I would go to that much trouble as there are many
of the Heathkit and other amps around that use a pair of the much more
rugged
4-400 and 3-500 type tubes.

Don't know anything about this particular unit,
but the frequency should be linear with input current.
Measure the frequency at two currents and you should
have what you need. For reference a 2-6 gig yig
oscillator (at least mine) is 20MHz./mA.

The " system" gets hit about 3 times a year on average.
http://www.rogerhalstead.com/ham_files/tower.htm
>
>If your installaiton was damaged by a strike event, I would like to now if :

Rarely does the system suffer damage.

>- you used a central ground point bonded to an external grounding system, as
>well as the home ground.

The system uses a network, or grid of ground rods. 31 in the antenna
and radio system, plus 5 for the house electrical system. It's all
bonded together.

>- you left some gears switched on during the strike event

Gears as in aircrafts ...
Queens English Vs US English = Gear and aircraft<:-)) Over here
neither uses an s which is confusing to some.

>- you left the TX switched on and the coaxial plugged without protection

Rarely is the gear disconnected and I don't remember the last time I
disconnected a coax due to storms.

>- you installed or not lightning controllers in your electric distribution

I do not have any in the distribution panel.
I do have PolyPhasers for each coax mounted on a common bulkhead which
is tied to the ground system using bare #2 copper cable.

>panel
>- you had installed another protection
>- you swicthed off and unplugged all devices

Never bother.

>- you think that the energy came back via the grounding network (probably
>dut to a difference of potential in a device)

I lost one computer due to a pulse coming in on the telephone line.
Nothing spectacular.
>
>Tell me only in a few words what was the most probable cause of the
>accident.

The one telephone cable was hot to ground with enough voltage to fry
the solid state components.

>
>At last, if you master the subject, do you really think that a grounding
>system, as best it could be as the advice provided by PolyPhaser for
>example, will never protect you against a direct strike on your antenna or
>on the house lightning conductor

I have 31 ground rods in the radio station ground system tied (cad
welded) to over 600 feet of bare copper cable within 2 inches of the
surface.

All antennas are grounded either due to design, or a balun.

The devices appear to work as advertised.

>Why ?

I've lost one PolyPhaser with no damage to the rig that was hooked to
it. (Kenwood TM-V7A)

I had one lightening strike destroy a repeater antenna, blow out a
section of 5/8ths inch Heliax about 30 feet down from the antenna, as
well as blow off every bit of water proofing and all the silver
plating from every coax connector at the top of the tower. The only
damage was the input transistor in a two meter rig which was not the
rig connected to the antenna that was hit. That rig was not protected
by a PolyPhaser.

Lightening and the results of a strike are unpredictable, but with the
repeated strikes here, experience has shown me that apparently the
PolyPhasers do their job in a well designed system.

Last Summer I had a barrel connector (N type) short out in the coax
from one of the 75 meter slopers to the tower mounted antenna
selector. I'm assuming it was probably a near by strike, but I have no
way of knowing for sure.

Tubes are mighty hard to find and terribly expensive. And they are easy to blow as well...but its a nice amp, be VERY carefull and you could do fine. Youd be better off with an SB 220 in the same price category though...OH I just happen to have one, check my webstie !! <http://www.myradioranch.com>

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,uk.radio.amateur

Hi OM, YL and SWL,

This is the first time since the publishing of my website four years ago
that I appeal to your collaboration.

My personal website LUXORION is devoted to amateur astronomy and hamradio,
this last section growing quite fast, with about 120 pages today heavily
illustrated, representing about 10% of my web.
See at http://www.astrosurf.com/lombry/menu-qsl.htm

Since 2000 this site is read by about 110 people every day, not only
amateurs (young and old), but also private companies and scientists and it
is referenced in more than 100 amateurs, clubs and pro websites, small or
large. So be sure that your information will be read.
And not only in english, but also in other languages, as I include a
translation module in the menu to extend the circulation of the information.
At last this site is updated quasi daily.

Several amateurs and professionals too, scientific and CEO of private
companies, have already participated in the French pages of my site or
helped me to complete some technical page about hamradio. LUXORION is
however not a media for adverstisings or a marketing place. It stands off
any political or commercial activity.

If some of you have written some articles covering in depth and seriously
any amateur radio subject - DX, equipment, software, activity, BCL, SWL,
theory, etc - (there is no maximum number of pages or MB), and are
interested in publishing this information on my website, feel free to send
me a comment. Of course any information published will stay under your name
with a link to your website or email if you like, as I alway do.

File formats accepted are htm if you like or any Word compatible format
(doc, etc). Pictures in uncompressed JPG or quality GIF (I can convert TIF
too).

Your support is welcome.

Thanks in advance

## 696. ICOM IC735 lithium battery

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-28 22:08:49 UTC
From: derek_toeppen@agilent.com
Message-ID: <2219e080.0401281408.1c4087dc@posting.google.com>
Source record: 23648

I have a 13 year old IC735. In the manual it says the
lithium battery is good for 5 years. After that it
should be monitored closely and replaced as needed.
The battery has not been changed in the 13 years.
So I am thinking its time to replace it.

The manual says it is used for the memory that
holds the frequencies and setup. And that it should
be replaced by Icom. At this time the radio remembers
all the setups and frequenies when powered down. So it
appears to still be functioning.

What happens if I remove the battery with the power
off? Do I loss just the setup? Or do I loss the operating
system for the radio?

Thanks in advance for any information.

I am going to make an assumption that this is the same or similar setup that is used in the IC-745. I had one several years ago and changed the battery and you really need to be careful. You should get a 3 volt source and tack solder it across the points on the circuit board where the existing lithium battery is connected. You may want to do the tack soldering on the same circuit trace but away from where the lithium cell is soldered in. Remove the lithium cell and replace it with the new one. Then remove the tack solder leads and you should be set for another 10 years or so. If you remove the lithium cell without the backup, you will lose the radio programming and it must be sent back to Icom for reprogramming. If you do blow the programming, you need not send the entire radio (at least on the IC745). As I recall, the memory board is socketed into the main board so all you need send back is the memory board.

I went to Radio Shack and purchased a two AA cell battery back, soldered the leads onto that with some fresh AA's and the battery replacement went just fine. It is quite easy to lose the programming though. A good friend of mine, who is a very meticulous technician, lost the programming on his IC745. Perhaps his solder connection wasn't good or he lost the memory voltage for a split second, but he had to send the memory board back to Icom.

If your radio is 13 years old and the memory is on the same battery, I would definitely make arrangements to replace that battery.

I have one and it's an excellent amp. Will run a full KW with less then 50
watts of drive. Last summer I replaced the 6 electrolytic capacitors with 6
new ones order from Digi-key for about $30.00. I bought mine new and
wouldn't trade it for anything. Just make sure the 8875's tubes are OK
before investing big bucks.

Yea its a bullshOt time travel unit (Actually a Army reciever) that some guy claims he can move through time with.....Isnt it obvious?

http://www.physicsforums.com/archive/topic/5396-1.html

About halfway down the page you will find it mentioned

No its not a nuke....I used to build nukes for the Military...

In article <5qjf10tslcrtmt3rfrmd79mhiqaa779bcq@4ax.com>,
wb4mleAT@surfbestDOT.net says...

> I have 2 Motorola 110vac/15vdc power supplies I need to
> identify/determine maximum load for. The only numbers I can find are:
> 27D82862K stamped into chassis
> HPN1003A ink-stamped onto chassis

<snippety>

Call 1800-422-4210 from 8:00-17:00 CST. Press option 3, then
option 2. This puts you into the Motorola Parts ID group. Give them the
HPN number, and tell them you're looking for an instruction manual or
specifications for the unit.

Happy hunting.

FWIW, I'm finally replacing the still-going-strong lithium battery in
my 20-year-old Icom 735, mainly because it is in the shop anyway, for
other work.

A few years back, an Icom technician told me the current drain is
15-20 nano-amps, and being a 180 mah battery, the estimated life works
out to 600 years or so!!

NO The 735 battery only retains the programmed memories the operator programmed it is not like the IC-745, 751, 751A, 76,1 R71A, 271A / H, 471A / H, 1271A , M700, M700TY where if the battery expires the frequency set up for those transceivers goes away.

If the IC-735 battery dies all your programmed memory channels with revert back to 28 MHz frequencies.

am_files/tower8.htm

Thanks for telling me.

I uploaded some frames for the local EAA Chapter and apparently "Front
Page" in its infuriating propensity to change everything to it's way
of thinking "did it to me" again.

FP is great to work with "at times", but it uses sloppy and bloated
code you don't need. And... If you forget it'll upload files other
than what you planned. Down load 'em and then re upload them and you
will find them reconfigured.

<sigh> Back to fixing links. (I wonder what else may have been
broken) I have nearly 60 megs on those pages.

Again, thanks,

am_files/tower8.htm

<sigh> It wasn't as bad as I feared, but not as good as I hoped.<:-))

Having a backup, I turned off the FP extensions on the server,
up-loaded the tower.htm file using ftp and then went through it image
by image.
One directory missing, 4 files missing (htms) and one bad link.
and one image. I have no idea as to where it put that image which is
supposed to be in a sub directory one level down from ham_files which
is one level down from the root.

All-in-all, about 20 minutes to fix including the wait for FP to
reconfigure.

That utility can be great for some things and a royal pain for others.

At least the frames still work.
OTOH when I get the interactive *stuff* going I won't be able to turn
them off.

Again, thanks for letting me know about the broken links.

I'm looking for a Cobra SR-15 handheld scanner.
This is a 1980s model, 100 channels, L/H/U/Air,
LCD display, very small. Had one years ago and
should never have sold it. Must be in working
condition and cosmetically decent. If it needs
new batteries, that's ok.

73,
Dean K5DH

Gary,

I am inclined to think you are correct. The battery only
supplies power to the CPU. Not an external memory. The CPU
has an EPROM window. So I think the radio programming is in
ROM. And the limited RAM inside the CPU only holds user
programmed frequenies.
But I could be wrong. It could hold calibration factors
or frequency range information for the PLL.

Have you tried this on an IC-735 yourself?

P.S. The current drain from the CPU must be very low. The
13 year old battery has a voltage of 2.946 volts under load.
Its still going strong.

Derek,

I worked for Icom America for 11 years until 2001 and yes I have
replaced the 735 lithium battery. As I said the only thing you will
loose is what you have programmed into the memory channels, so write
down what you have in those before proceeding. I would be inclined to
let it die and then replace it at that time.

I have never known an IC-735 that needed any sort of reprogramming
except for memory channels after you change the lithium battery.
there is not even a CPU reset that I remember on the IC-735. The other
transceivers I mentioned above are not the same and do use volatile
ram that is battery backed.

Nothing. Even were such a thing possible, and you converted the 1Hz RF carrier to audio, the human ear can't hear that low anyway.

Ed

If you follow the rule of thumb that the signal bandwidth should be less than the carrier -- nothing. Your signal would be less than 1Hz, and you can't hear sounds that low.

If you modulate your 1Hz "carrier" with something audable you'd hear your original signal fading in and out at a 2Hz rate.

I imagine that a geo- or astro-physicist might be interested in electromagnetic effects below 1Hz, though.

1. Installing a battery holder so that "battery replacements are easier" every fifteen years falls under the category of "fixing" non-existent problems by introducing potential new ones.

2. Stating one's honest opinion as a reply to a question is not necessarily a snide remark. In this case it was a legitimate answer, not necessarily to the original poster's liking, but that's Usenet for you.

3. Threatening to jeopardize someone's reputation and a source of income based on the false impression that a Usenet forum represents customer service is just nasty.

4. I don't know what gergils are, so I couldn't play with them even if I wanted to.

5. As for your hissy fit, do you also French-kiss your mother with that mouth?

There is a program out called CTR-817 for the PocketPC OS that controls
the FT-817 transceiver. Do a Google search for that and you should find
the site where it can be found (I don't have the URL handy right now).

Your are welcome.. The 735 was probably in its day one of the best
little transceivers made, seems there are over 40,000 of them out
there. The receiver many time out preformed the larger transceivers
in some contest situations. I meet a couple of people who were at P40V
in the winning station sometime in the 1986 to 1989 era. They had 2
radios connected on each band with a switching arrangement that
allowed one to take over the antenna if he heard something. Many times
those ops said the 735 was doing better than transceivers like the
751A and 761.

I am sure the newer DPS based boxes will do more, but the 735 is no
slouch. Enjoy it.

<< Also try Windows ME, more stable than 98, handles most hardware without needing mfr. drivers.. >>

Just say "NO" to this. Our IS staff nickname for Windows ME is the "Mistake Edition!" NOTORIOUS for having slow/poor performance on many systems. Our IS guys either take a unit back to 98SE or up to W2K. They have over 2,000 PCs to handle...I'll take their opinion as correct.

Stable? About as stable as a unicycle in high wind. My Dell runs alot better w/98SE than it ever did with ME...and it was an "optimized" system for WinME.

Have two machines running here. One with ME and the other 98SE. The 98SE is way more stable than the ME machine. The 98SE machine is hooked up for just radio use, running 2 printer ports and 5 serial ports plus a network card and almost never has a problem, works really well. The ME machine is newer with fewer components is known to choke on almost a regular basis.

If it was not such a hassle I would revert the newer machine to 98SE.

Sam

I disagree, Win98 Se is MUCH more stable than ME, as ME's core is
basically WIn98.
Put Me one one of two identical computer setups, and 98se on another,
run them for a time, and see how many times you have to reboot ME...

This is from 25 years experience, and I have run all the versions of
Windows from the get go..

You should open the back of the radio very carefully, and pour 4.3 oz of
cherry flavored Metamucil in the back. That will unblock the freq you want.

It's doubly off topic

This is not, nor ever has been, a buy and sell newsgroup.

And, even if it was, your ad has nothing to do with radio, even if
you think it hurts less to proclaim it off topic.

This is the end game of the stupidty of letting ads into a newsgroup.
Because once there are ads, then people like you decide it's okay to
post ads that have no relation to the topic.

There are plenty of places where you could advertise for such stuff,
starting with your local buy and sell newsgroup, maybe you've got a state
wide newsgroup for buying and selling, there are worldwide newsgroups that
are for they buying and selling of computer stuff, and if you were really
stuck, you could at least have the decenty to post your no-radio related
ad to a newsgroup intended for radio items but which is at least a buy and
sell newsgroup, rec.radio.swap

You can run a classified ad in your local paper.

You can go to Ebay and look for what you want.

But, no, you overlooked all of these obvious places to advertise (or seek)
what you want, you posted to a newsgroup intended for the discussion of
amateur radio equipment.

Gary,

Thank you for clarifying this issue.

Based on this information, I think I will stop worrying
about the battery. When I loss the memories I will
know its time to replace it. Based on its current voltage,
that could be a number of years yet. Which means many
more trouble free years from the radio.

>ruining the lithium ion bat pack.

Lithium cells are quite tricky to charge properly. They require tightly-regulated charging voltages and charging-current rates, and special treatment when in deep-discharge states or when nearing full charge. It's quite easy to damage them by using incorrect charging protocols, and this can be quite dangerous - their stored-energy content is high, and their active material is distinctly flammable.

I would not try to homebrew a charger using an LM317. It _might_ be possible to homebrew a charger using one of the special-purpose lithium-battery-charger chips from Maxim, LT, National Semi, etc., but I'd be rather reluctant to try unless I _really_ needed one of this sort.

OK. I'm going to reveal my secret idea, so PLEASE don't tell anyone.

Take one old farm silo. Fit it with an old sweat 16 speaker system, or something big-- at it's bottom. You'll need a big amp as well. Open the top. This bugger should resonate somewhere around... Lets see...silo...about 30 feet tall...well about half the frequency of 16' pipe organ pipes. In the sub bass range. Oh yea, make sure the silo is tall enough to get below the audible range.
Find another the same size or several around the country.

There you have it. Sub audible CW. How far do you think it'll travel. I suspect you may need some elephant repellant.

No, it IS to keep elephants away. But, you say. There aren't any elephants anywhere on this continent.

SEE! it works!

This looks like a complex problem. I saw (don't remember where) a data sheet on IC to do just this and the process was pretty strange. Not constant current/time nor was it float voltage.

Try searching the web. I'm pretty sure is was a well known company data sheet.

Many of the ham-specific shops (HRO, AES, etc) have a section for used
or consignment equipment.

Far more shows up at the various ham flea markets, or on various
auction sites, including eBay, but also some radio-specific ones.

Happy trails,

Ya, but....
3Mcs - 30Mcs == HF
300Kcs - 3Mcs == MF
30Kcs - 300Kcs == LF
3Kcs - 30Kcs == VLF
300cs - 3Kcs == ? VVLF
30cs - 300cs == ? VVVLF
3cs - 30cs == ? VVVVLF
0.3cs - 3cs == ? VVVVVLF

But, at 1 cycle-per-second, I suppose one could employ
some sort of zero-crossing amplitude-step modulation.
It would take a month or two to transmit a moderate-sized jpeg.
HI!HI!

<-snip->

Yes. To follow up on my previous followup with my pure-guesswork
table, here is what can be found at:
http://www.vlf.it/frequency/bands.html

Designation Frequency Wavelength
LF low frequency 30kHz to 300kHz 10km to 1km
VLF very low frequency 3kHz to 30kHz 100km to 10km
ULF ultralow frequency 300Hz to 3000Hz 1,000km to 100km
SLF superlow frequency 30Hz to 300Hz 10,000km to 1,000km
ELF extremely low frequency 3Hz to 30Hz 100,000km to 10,000km

so, I propose:

RLF ridiculously low freq. 0.3Hz to 3Hz 1,000,000km to 100,000km

Hi
I do repairs specializing on the Kenwood TS-940, TS-930 radios. Complete rebuilds from top to bottom, PLL and Power Supply repairs and updates, I have over 6 + years experience with these radios. I can make your 940/930 trouble free and perform as new again !!

Also TS-870, TS-850, TS-450, TS-430, TS-440, TS-820, TS-520

Yaesu FT-102, FT-990, FT-890, FT-767, FT-757, FT-1000D, FT-1000MP

Completely satisfied customers and many references.....Very reasonable rates, fast turn around time. I also do mods for SSB audio and filters... If you need a repair or a custom modification of any type, give me an email

thanks John, KI4NR

## 770. Can the Drake TR-7 nise blanker be improved?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-01-31 12:40:20 UTC
From: kb@shadowstorm.com
Message-ID: <71b288f3.0401310440.78cfbd44@posting.google.com>
Source record: 23722

I have a Drake TR-7 with the second version of the NB-7 noise blanker (not the nb-7a). It is not very good at blanking out noise. The noise blanker on my Cobra 148 NW ST (cb radio) is far superior at blanking power line noise. Are their any known modifications for improving the Drake NB-7 noise blanker or any replacements for the NB-7 noise blanker?

I saw the result of a lightening strike at Barkway on Royston Heath.
The lightening came down our waveguide without any damage but inside teh
equipemy huit it vapourised teh big circuit breaker on teh wall and left a
hole wher it had been and chared melted wires some distance above and below
wher the box had been mounted.

I just did a Google search on P8002 FET transistor and got many hits on the search. Unfortunately, most of them were not in English so don't know how helpful they would be. Perhaps you may have better luck if you speak the appropriate language. Good luck.

There is none. Although some people may object if you start transmitting
your alpha, beta and gamma electro-magnetic waves at them.

Sorry. I meant ask what the audio limit would be. In PCM, for example,
the highest permissble frequency is half the sample rate.

What is the highest permissble sound frequency in terms of its carrier
wave in AM radio?

## 786. Re: Icom IC-751 opinions?

Source record: 23738

Dave:

Overall, a good radio, however, it does take up a bit of space. Unless money is the first consideration, I'd suggest one of the small, full power mobile units available at this time... (Like the Yaesu FT857 or the Icom 706...) I've got a Yaesu FT857 in my pickup, and really like it (now, if I could take care of the S9 noise the truck generates, it would be a wonderful rig to use when mobile too!)...

If you don't mind the space, the Icom 751 is a good rig. I currently have two of the 751 model and one 751A that will be going up on eBay as soon as I have the time to take pictures and get them posted. One spent ten years on a sailboat, and despite some pitting of the front panel, still works and sounds great. The 751A is near mint. There are minor differences between the two models, and some claim the A is more reliable, but I haven't heard of many problems with either radio. The only reason for letting the ones I have go, is that I don't have much room in the shack, and I got a 746Pro for a price I just couldn't pass up.

The only thing to be aware of on the 751 (and some other Icom radios) is that the memory battery needs to be replaced periodically, and if it goes dead (before replacement) so does the unit. However, there are several people out there that will replace the battery and reprogam the memory unit, and there are also several aftermarket replacements that don't use a battery to keep the radio operating code (software) alive.

No, Engineer (Microwave) with PYE Telecommunications
We had teh first non GPO television microwave link between Birmingham and
London.
We were trying to break teh GPO monopoly on supplying and also regulating
radio communications.
It must have worked because the GPO /BT is no longer the only supplieer.

CML building Birmingham, Meriden, Cold Ashby, Barkway, Hill Crest (Highgate,
just down teh road from the BBC station at Swains Lane)

We were contracted to ATV.
Teh Link was used to show the adverts going out in Birmingham to the sponsors in London.

Thanks for taking the piss out of my creeping disability, It keeps a sens of proportion for me,
console yourself that it won't last much longer and I won't be able to type at all.

I checked the RS web site they no longer list any Ham Radio transceivers
just accessories.
I saw one for sale at R&L Electronics back about 6 months ago for around
$150.00. They are out
there mainly being used by CB Freebanders on the low end of 10 meter. They
orignally sold around
$250.00 when they were first marketed.

I had a Uniden version of the same radio that cost $275.00 that had more
features might look
around for one of those.

# 792. ASSISTANCE WITH MOTOROLA GM300 REPEATER

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-01 15:42:08 UTC
From: dt <NOSPAM@nospam.net>
Message-ID: <ai7q109miia1d6vtkpfi9o82vsamq8a3jo@4ax.com>
Source record: 23744

ASSISTANCE WITH MOTOROLA GM300 REPEATER

There are some mods published (on Batlabs, and in an old edition of M.R.T.) which have some simple mods for turning a pair of Motorola MAXTRAC mobiles into a basic repeater. Receive activity on one radio keys the PTT on the other radio, and vice versa.

I am attempting to do this with a pair of GM300s'. These are supposedly "the same" radio but the board on the GM300 is signficantly different than the MAXTRAC described in the published material.

Can anyone provide some specifics on performing this mod on the GM300? I hear it can all be done through the aux. I/O ports on the rear of the radio.

Thanks!
Dan (remove the NOSMAPM below)

## 795. Re: FT-101e neutralization question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-01 17:12:56 UTC
From: fmmck@aol.com
Message-ID: <20040201121256.21852.00001334@mb-m06.aol.com>
Source record: 23746

<< Trying to get a higher output reading by adjusting the capacitor only sends the finals into oscillation with lots of hum and a somewhat "dirty" signal >>

Gil-

I just came across your message and see no one responded. I'm not familiar with the alignment procedure for the FT-101e, but had an FT-101B for a couple of weeks back in the mid 70s. (It caught fire, and I got my money back!)

Do you have an operator's manual and/or a service manual? Your comments lead me to think you may not be following the correct procedure for tuning the final amplifier.

As I recall, that type of transmitter had a "Pi-Network" output tuner. Normally you start with the output capacitor plates fully meshed and tune the plate capacitor for a dip in plate current. You increase loading by rotating the output capacitor to un-mesh its plates, and re-dip the plate current with the plate capacitor. You continue this process until the plate current dip is at the rated current.

At that point, a neutralization problem is evident when the minimum plate current does not correspond with maximum power output. If you can adjust neutralization so they agree, it may solve your problem on that particular band. You should make the adjustment on the band specified in the manual.

It is also possible that your transmitter is going into a parasitic oscillation on some radically different frequency. Does the FT-101e have parasitic chokes connected to the final plate caps? These are normally carbon resistors with a coil wound around them, perhaps ten ohms two watts with about five turns of heavy wire connected in parallel with the resistor. It is possible that the resistors have aged and changed value, upsetting the choking function.

Good Luck.

<< I am looking for info, on the 10 meter allmode by Radio Shack, are they still "on the market"? >>

Lorentzson-

I purchased one several months ago, and there may still be some left in a few stores. They are the HTX-10, Radio Shack Catalog Number 19-1110. Most stores can check other store inventories through their computers, and either tell you where to go or have it shipped there.

I don't recall what I paid. At one time it was about $79, but was probably marked down even further. The latest price should still be in the Radio Shack computer system, even if the radios are no longer available.

Service information is available at http://www.albrecht-electronic.de/service/Amateurfunk/AE485S/. The HTX-10 is apparently derived from the Albrecht model AE-485S.

By the way, it isn't all mode, as it doesn't have CW. There are some mods for it on the web, including something about adding CW, but I haven't tried it. (The old HTX-100 had CW but I don't think it had FM.)

Considering three strikes a year on average and this is not all the
same strike, and all but the antenna and Heliax have been
inexpensive...Yup.

I've had line noise trash a computer on a sunshiny day. Lost
everything except the CPU of all things.

Computers run 24 X 7 (bout 32,000 hours run time a year) and are hard
wired together with Cat 5 cable.
No problems since going to UPSs with line conditioning.

Last Fall, this one had over 57 transfers to the UPS over 3 months
including 3 brown outs, one black out (quite a few hours), and the
rest was line noise.

BAMA is now being mirrored!

Through the generosity of Bob Duckworth, AH7I and Ed Kujawski, a mirror of the BAMA ftp site is now available. The mirror is a web site, so you will see the ftp archives when you click on the mirror address with your browser. You may find it helpful to look for your manual using the BAMA site and then click on the mirror site, navigate to the file that you want and download it. While the name of the mirror site has yet to be determined, the numeric address is all you need for the moment. Please point your browsers to http://216.24.174.245 and spread the good news!

And a great big "Thank you" to Bob and Ed for helping take some of the strain off of the BAMA server.

73,
Ken K4XL

Yes, Yaesu started doing the software in house and dropped RT Systems
as a vendor.

However, RT Systems does make their own software for the FT-90, which
many consider to be better than the Yaesu software. I know I've been
happy with it.

See:

While it may not be "proper" I for appreciate it.
I made a dipole 2 M out of 1/2 inch copper...no j pole, no big fancy thing, just a simple dipole, 2 lengths of copper tube, cut to mid freq, joined with a pvc T. Actually made a 440 dipole as well out of the one piece of tubing. used the remainder as a seperator between the 2 and secured it on a mast. Good match, and i've had nothing but good signal reports. it's even stood up to our central NY wind, snow and cold...quick, easy and it works...i can't ask for much more. 73 Doug

An auction is merely one means of agreeing on the price to be paid by
for an item. The person offering the goods is the seller, the person who
pays the agreed price is the buyer, and the result is the sale of the
goods. I still recall real estate ads headed "For Sale by Auction."

Yep, you are wrong. Insects had antenna millions of years before man
ever walked the earth. In fact, the word "antenna" comes directly
from the insect world and was adopted for RF antennas, because they
reminded someone of insect antenna.

That certainly would explain why the plural of the two different types are
different.

I believe that both plurals (antennas and antennae) are correct. One is
simply the Latin plural, and the other the Anglicized plural.

Nope, antennae only applies to bugs, the devices used to receive radio waves
are antennas.

160-10 meters. comes with box manual mic powercord unopend service manual Am filter and fm unit installed.
$430 shipped lower 48 states
E-mail for pics of the radio

# 825. Re: Mounting FT-100D in Nissan Frontier

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-03 06:34:00 UTC
From: Howard <mensch90249@yahoo.com>
Message-ID: <tveu109ko7npfqlhm7hn07smva37shuhb6@4ax.com>
Source record: 23627

Jason,
Though not HF, I did install a 2M/70cm rig in a 2001 Frontier ........ after much thought and snooping for a way to feed the cables. First off, do you have an extended cab or crew cab?

What I did was use the space under the jumpseat (I have the extended cab model) to mount the 'rf deck', it is attached to the metal that is the sub-structure for the jump seat. Then to get power to the radio I hooked up to the battery (each lead fused - of course) out from the engine compartment and into the channel used for the frame. Pulled the wire through the frame and as luck would have it there is a hole almost right under the extended cab. Luck was going my way as there were two holes already drilled (and tapped for gosh knows what accessory) and ran the positive through one and the negative the other. Having only the 'basic radio/cd player' there is a nice cutout below the radio that the remote head now sits in and the mike comes up next the the driver's seat. That part was the easy part, then it was on to installing an antenna without drilling. This is much easier on VHF/UHF as I used a Diamond mount on the hood, no drilling needed there either. To route the cable, there is a removable plate about 1.5 inches square near the steering column, removed the plate & drilled a hole & voila the cable was in the cab. Routed the cable under the plastic trim on the bottom of the door opening and then into the back of the cab and to the radio. Do everything possible to keep your antenna leads away from the the main electrical harness which I recall being near the shift console. Works fine for me, no alternator whine on the radio and no failure of vehicle elctronics when I transmit. On my last Nissan I had to move the UHF antenna as keying up would drive the electronic ignition berserk - nothing like keying up and dropping 20 MPH in speed while on the freeway!

I realize that you will have a few other issues to work with the HF installation vs VHF/UHF, but I do hope that my installation gives you a good starting point and allows you to minimize drilling.

Best of Luck & 73,
Howard KE6MAK

My guess is that the plural for insect antennae came from Latin
and the plural for RF antennas came from a more modern language.
The word "antenna" entered the English language around 1646
from Middle Latin according to my dictionary. There were no
RF antennas in 1646, at least not on purpose.

My unabridged dictionary says that antennas is the plural of
RF antenna and antennae is the plural of insect antenna.

Your wavelength of interest is 3cm at a minimum...
you're trying to put them into a box smaller than
that.

How much gain should this antenna have? How
broad-banded does it have to be? How much
power does it have to handle? What kind of
polarization do I want? These are basic
questions you should answer.

## 845. ADI AT-600D---No Display?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-04 20:12:36 UTC
From: Tedd <tdoda21@rogers.notme.com>
Message-ID: <fWgiYSiOQd92-pn2-DhfO9dVkDXTu@localhost>
Source record: 23647
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Greetings:

I have an AT-600D ADI dual band HT in which the display has gone blank. All functions still work, but you can't se what you're doing, hi!!

I've disassembled the radio and checked the output of the driver chip, and all lines seem to have the proper square wave going to the display. I don't however see any data being pased from the main chassis to the display board.

I'm working without a schematic here guys, so any leads to where to look next would be appreciated. I can't see any damage to the LCD panel itself, and have cleaned the two conductive rubber strips joining the board to the display.

Thanks for any assistance.

Please reply to : ve3sed@rac.ca or post here.

Tedd, VE3TJD

## 846. Re: rf antennas

Newsgroup: rec.radio.amateur.equipment

I am trying to build rf transmitter and receiver that could transfer information (doors open closed, light on, etc, etc) from my car in the parking lot to my office desk. The distance is about 100m. I would like to have the receiver to be very small-key chain size. Therefore I thought high frequency might result in a smaller antenna. Most probably bandwidth will be very small (I do not need high speed data transfer). I am not sure about the polarization issue. About the power, that depends on the design, most probably. I am planning to use the IC from; http://www.maxim-ic.com/Wireless.cfm

Is it possible to do this kind of a device that small?

Easily... as long as all it has to do is receive. You
can pump out 20W of UHF RF from your car, you'll
hear it without any antenna at all inside, probably.
Your concerns are path loss (not that much through
the walls of the building) and receiver antenna
inefficiency (the greater of the two, since you put
a small size limit).

Perhaps you're talking about this chip:

http://www.maxim-ic.com/view_press_release.cfm/release_id/932

Pretty impressive, I must say... looks like fun.

Keeping this On Topic for r.r.a.a, I'd start with
a piece of wire 1/4 wave long, run around the
perimeter of your device, as an antenna.

# 851. FS: Heathkit, Eico, Knight, Lafayette and More!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-05 05:24:28 UTC
From: Dave Hollander <n7rk@cox.net>
Message-ID: <4021D388.83CF3EF1@cox.net>
Source record: 23503
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I have the following items for sale that are excess to my needs. Prices do not include shipping. I will ship overseas.

Heathkit Laboratory LG-1 Signal Generator.....$50 plus shipping
This is the higher end signal generator from the 1960ï¿½s with shielded compartments and better performance than the lower end Heathkit signal generators. Covers 100 kHz to 30 MHz in 5 bands with both CW and modulated CW functions, a step attenuator with steps in microvolts, adjustable modulation and jacks are for external modulated source No manual but they are available from several sources. Tested and works fine.
http://members.cox.net/radiostuff9/heath_labgen.jpg

Heathkit QM-1 Q-Meter.....$100 plus shipping
Rare Heathkit QM-1 Q-Meter. This unit is from around 1952. This instrument is for working with resonance circuits to determine L and C and frequency. The unit works and includes a copy of the manual.
http://members.cox.net/radiostuff9/heathqm1.jpg
http://members.cox.net/radiostuff9/heathqm12.jpg

Knight CB Checker Ten-2 CB Checker.....$125 plus shipping
This is an interesting Knight piece from the early 1960ï¿½s. Has the following functions: SWR, % modulation, Field Strength, Crystal activity, monitor, signal generator, Code Oscillator (on a piece of CB test equipment?), audio oscillator. This is a collector quality unit with original box, manual and all original paperwork.
http://members.cox.net/radiostuff9/knightcbchecker.jpg
http://members.cox.net/radiostuff9/knightcbchecker2.jpg
http://members.cox.net/radiostuff9/knightcbchecker3.jpg
http://members.cox.net/radiostuff9/knightcbchecker5.jpg

Lafayette HB-76 VHF Receiver.....$35 plus shipping
This is a VHF receiver from the 1960's that covers 152-174 MHz. The unit is in excellent condition cosmetically and does work.
http://members.cox.net/radiostuff9/laffvhf.jpg
http://members.cox.net/radiostuff9/laffvhf2.jpg

Eico 717 Electronic Keyer.....$50 plus shipping
This keyer was designed to match the Eico 753 transceive from the 1960's. The keyer needs some work. The unit comes on and works momentarily and than dies which would indicate a defective component or tube. Includes a copy of the manual.
http://members.cox.net/radiostuff9/eico_keyer.jpg
http://members.cox.net/radiostuff9/eico_keyer2.jpg

http://members.cox.net/radiostuff9/eico_keyer3.jpg

Signal Corps U.S. Army Test Set Frequency Meter Test Set I-129-Bï¿½ï¿½ï¿½.$100

plus shipping.
Military set of James Millen wattmeters covering 1.5 to 40 MHz. Case
manufactured by Hickok . Excellent condition
http://members.cox.net/radiostuff9/wavemeters1.jpg
http://members.cox.net/radiostuff9/wavemeters2.jpg
http://members.cox.net/radiostuff9/wavemeters3.jpg
http://members.cox.net/radiostuff9/wavemeters4.jpg

ZM-3A/U Capacitance Analyzer.....$75 plus shipping
Nice unit, works well, new power cord. Insides look like new. Don't have

a manual , however they are available from several sources on the
internet
http://members.cox.net/radiostuff9/zm32.jpg

Book - "The Portable Radio in American Life" .....$25 plus shipping

This is a 260 page book published in 1991 covers the
history of portable tube radios and transistor radios from the 1920's to

the 1970's. Includes historical information on Sony, Zenith radio,
Admiral radio and many other brands who built portable radios. This is
an excellent reference book if you collect portable and transistor
radios. These are new books. This is a great radio reference book. I
have 2 of these books left.
http://members.cox.net/radiostuff9/portableradiobook.jpg

Set of crystals for the Navy TDQ transmitter...$75 plus shipping
Their are 24 crystals of which 23 ( a few duplicates) are the original
Navy crystals; one crystal is not. The wooden box is in great shape
also. Here are the frequencies all in MHz: 5.80,12.90,13.10, 13.26,
13.50, 13.74,13.75,
13.82, 14.02, 14.02, 14.30, 15.62 ,15.64, 15.66, 15.68,15.78,15.84,
15.85, 15.86,15.86,15.86,15.92,15.92, 16.00, 16.24
http://members.cox.net/radiostuff9/tdq_xtals.jpg
http://members.cox.net/radiostuff9/tdq_xtals2.jpg

Drake ML-2 Marker Luxury 2 Meter Transceiver.....$60 plus shipping

This 1971 2 meter transceiver has a solid state receiver and a tube
final putting out 10 watts plus. Also has a built-in AC/DC power supply.

This one is in nice condition and works well. This one has the original
crystals for 34-94, 94 Simplex. For more info on this radio visit this
link: http://www.dproducts.be/Drake_Museum/ML2.htm
http://members.cox.net/radiostuff9/drake2m.jpg

Model 10-0 $ 20
Sold as is, no manual.

Carver Audio Amp 95+%
Model M-2120
With Manual. $ 75

All Items Will include manuals, and any docs that I Have.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
cart. I also have a Scsi raid controller with 2 carts, that with the
above,you could have a great start on a server..

I also have a lot of C64's 3 good 3-5 fixable or parts.
Much peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
AND a lot of cartidges, and software - games to productivity.
Included is all manuals, plus extra books for programming ect.
Included is software to run a bbs from the C64..
I would like to sell it all as one group. Will cost more,
if sold piecmeal....

Shipping is NOT included

Hi all

Mark here in Timaru, New Zealand. I'm looking to purchase a digital Frequency Display for my old TS-520D transceiver. I have the manual for the DG-5 model but it seems to be designed for the TS-520S Rig! there is a adaptor kit DK-520 which I haven't got also. It may be a tall ask but if any one can it would be appreciated

I'm looking for a Cobra SR-15 handheld scanner.
This is a late 1980s model. 100 channels in 10
banks. Covers VHF-Lo/Hi, UHF Lo/Hi, Airband.
Must be working, clean, in nice condition, and
preferably with original charger and antenna.
MUST come with the manual. OK if it needs new
NiCd batteries, I can take care of that.

Thanks and 73,
Dean K5DH

## 872. messing with a car radio

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-06 18:25:58 UTC
From: cde@rocketmail.com
Message-ID: <c057333a.0402061025.a119808@posting.google.com>
Source record: 23524
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.shortwave

I have an 80s model delco am/fm radio. I'd like to attach an external long wire AM antenna, an external FM antenna, and rig something up so I can listen to it with headphones at bedside.

Questions:

1. What do I need to do/build the headphone connection? Can I put something together using the car radio speaker wires?

2. Is it possible to hook up the long wire antenna without getting too complicated? Can I use the antenna plug on the radio in some way, or will I have to get inside the box? I don't know a lot about electronics. I have a soldering iron and have fixed the occasional loose wire on things around the house, but not much more than that.

Or should I just forget it and buy a portable receiver? I mainly want to listen to AM talk at night and a particular FM college station in the next town. I read on several posts about using a car radio because of the AM reception.

I've also thought about buying a used Grundig receiver, in particular the S350. I think having the option of listening to shortwave might be fun. Does this thing put out good audio via headphones?

Thanks.

You can use the speaker wires, however, the audio used to feed the speakers will be amplified, and will probably overdrive your headphones. You'll need to find a way to match the headphones to the speaker output.

> 2. Is it possible to hook up the long wire antenna without getting too
> complicated? Can I use the antenna plug on the radio in some way, or
> will I have to get inside the box? I don't know a lot about
> electronics. I have a soldering iron and have fixed the occasional
> loose wire on things around the house, but not much more than that.

It should be easy to connect a random wire antenna to the jack of the car radio. Just solder the plug onto the wire antenna. I think they use Motorola type plugs as a standard. However, an antenna that is good for the AM broadcast band won't necessarily be good for the FM broadcast band. However, as you stated below, you just want to listen to an FM station in the next town, so a random wire antenna will probably work OK.

> Or should I just forget it and buy a portable receiver? I mainly want
> to listen to AM talk at night and a particular FM college station in
> the next town. I read on several posts about using a car radio
> because of the AM reception.

Well it all depends on if you're looking to do it easy, or if you want the challenge of making it work. If you're looking for a technical challenge then the car radio will fit the bill. You'll need to match the headphones to the speaker output, attach an antenna, and find a way to power it from 12VDC, either from a battery or power supply. It would be fairly easy to go buy a decent AM/FM radio for DXing (GE Superradio comes to mind).

This is easily done with a resistor divider... I'd put a load
for the speaker, too. This would look like an 8-ohm 20W
resistor (RatShak sells 'em) across the speaker leads, with
a 500ohm pot across that... your h-phones are tapped
from ground to the center wiper of the pot. Adjust for taste.

# 876. info wanted:K6EKH linear amp

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-07 03:15:55 UTC
From: Steve <zarco@sonic.net>
Message-ID: <LLYUb.13150$XF6.251557@typhoon.sonic.net>
Source record: 23528

Hi Gang,
A few years ago, at a local electronics swapmeet, I bought
an amp that I'd like to get some info on. It appears to be
a very nicely built homebrew. It is labelled "K6EKH #27",
which leads me to believe this guy built quite a few of these.
Looked up this callsign on QRZ, and there is no listing.
If anyone has any info about this amp, I'd like to hear from
you.

This amp is self contained (internal BIG power transformer).
It uses a pair of 4-400A's in parallel. Grounded grid, input
fed into the cathodes (untuned).

Thanks!

Steve

It would be easier to buy a normal radio. For AM a CCRadio or GE
Superadio 3 would work. The best FM reciever there is is the Tivoli
Audio Henry Kloss Model One, but be prepared to plunk down mucho dinero
for one ($100 last time I checked) and it's not that great on AM. I'd go
with a SR3, or you can try to get an SR2, which some think had better
build quality, but since it's (obviously) an earlier, out of production
model it's hard to find.

The superradio isn't fm stereo, is it? I want stereo for fm listening.

Depending on the frondend design... Early AM car radios included the
antenna feedline capacitance as part of the tuned circuit; and included
a trimmer to fine tune the radio tracking to match the antenna. The
antenna was connected to a very high impedance point of the RF
stage tank.

Later designs used aperiodic frontends, and were less critical. You
might loss ground using a long antenna on the set, depending on its
vintage.

If you can't find all that, you might consider this option. Works with
nearly any radio.

Here's a good place to start <http://www.arrl.org/tis/info/dipole-h.html>
You'll need a separate dipole for each band or you can use traps on a single
dipole as a compromise.
An Internet search under "hf dipole antennas" will yield a few thousand
returns if you want to look elsewhere.

Reg I can't resist a follow up on your posting just at the point I was going
to give up messing with this newsgroup.
Anyway, I have to say I fully agree with what you have said. Fortunately my
antenna designs meets all the requirements.. I am anticipating it to be
published sometime this year. Why I am replying to your posting is to say I
am not wasting much time on this taper thing as I have better things to do
with my time.At the end of the year ..
I do have one problem however Reg, tho you won't see it that way, the
design is not in a book, which is going to be a real road block on this
group. So hang around for a few months Reg as many on this group cannot
think for them selves and thus will need some one like you to explain
things. Hopefully you will not have to delve into problems like current
taper The idea is dead over here that books should ONLY lead you so far
and then you procede into subjects on your own to new frontiers and not to
rest on your laurels once you get a degree and learn to be a parrot..
Looking forward to coming home for a short visit soon
but with the $ going down I may have to bring sandwiches
Cheers and beers mate

You might check to see if your 751 has plastic trimmer caps in the
PLL. If you do, they don't always age well. They can be replaced with
ceramic caps (I'm currently having the plastic caps replaced in my
735).

Get a 1/8" stereo jack from RS or wherever. Use a 100 ohm resistor
between left and right speaker outputs and the jack. Too loud? Try a
higher value. Not loud enough? Try a lower value. Resistors are
cheap.

>2. Is it possible to hook up the long wire antenna without getting too

For normal use just put a 5 foot length of wire on it. That should
work for FM, too. It's not much different than what was on the car.

If you want to listen to distant stations a different antenna is
needed for AM and FM. I used a tuned loop antenna with a shielded
pickup loop on a mid-80's Dodge radio and it worked great. It was
selective enough to bring in stations adjacent to a nearby 50,000 watt
clear channel station (WHAM 1180, Rochester, NY).

Anyway, try it out. It will cost a buck or two and you will learn
something in the process.

Good luck,
Jim

CDE,

The CCRadioPlus has FM Stereo via the Headphones and LineOuts.
+ External Antenna Connections: AM is OK and FM is Poor.
+ Build-in-Speaker Sound: Designed for th Human Voice; but Good.
+ Price = $160 -&- Value = Good
http://www.radiointel.com/review-ccradioplus.htm
http://groups.yahoo.com/group/CCRadio/

The GE Superadio III 'only' has Mono-Phonic FM Sound.
+ External Antenna Connections: AM is Ok and FM is Ok.
+ Build-in-Speaker Sound: The Best.
+ Price = $60 -&- Value = Very Good
http://groups.yahoo.com/group/SuperadioIII/

The Tivoli Model One FM Stereo via the Headphones and Rec-Out.
+ External Antenna Connections: FM is Ok and AM None.
+ Build-in-Speaker Sound: Very Good.
+ Price = $100 -&- Value = Good
http://www.tivoliaudio.com/pm1blu.htm

The Grundig S350 has FM Stereo via the LineOuts
and only Mono-Phonic Sound via the Headphones.
+ External Antenna Connections: AM is Very Good and FM is Very Good.
+ Build-in-Speaker Sound: Very Good.
+ Price = $100 -&- Value = Best
http://www.radiointel.com/review-GrundigS350.htm
http://groups.yahoo.com/group/Grundig-S350/

Recently claims have been made about the better than average
AM & FM Recetion of these radios:
* Cambridge Soundworks CD 740
* Sangean WR-1 Wooden Radio
* Sangean Q Radio

FWIW: I was not impressed with the FM Reception of the Tivoli Model
One.
- In the "Urban" SF Bay Area using an Omni-Directional "X" External
FM Antenna mounted at 28Ft. The Tivoli Model One performed as well
as the CCRadioPlus, GE Superadio III, Sony ICF-2010; Grundig S350;
and Grundig Satellit 800-M.
- In the "Rural" Twain Harte,CA location Up-in-the-Hills and
Down-in-the-Valley using an FM Reflect External FM Antenna located
on the second story of the house. The Tivoli Model One did not
performed as well as the CCRadioPlus, GE Superadio III, Sony ICF-2010;

and Grundig S350.

The superradio isn't fm stereo, is it? I want stereo for fm
listening.

= = = From: ellisc (cde@rocketmail.com)
= = = Subject: messing with a car radio
Newsgroups: rec.radio.amateur.homebrew, rec.radio.amateur.antenna,
rec.radio.amateur.equipment, rec.radio.shortwave
Date: 2004-02-06 10:25:59 PST

I have an 80s model delco am/fm radio. I'd like to attach an external
long wire AM antenna, an external FM antenna, and rig something up so
I can listen to it with headphones at bedside.

Questions:

1. What do I need to do/build the headphone connection? Can I put
something together using the car radio speaker wires?

2. Is it possible to hook up the long wire antenna without getting too
complicated? Can I use the antenna plug on the radio in some way, or
will I have to get inside the box? I don't know a lot about
electronics. I have a soldering iron and have fixed the occasional
loose wire on things around the house, but not much more than that.

Or should I just forget it and buy a portable receiver? I mainly want
to listen to AM talk at night and a particular FM college station in
the next town. I read on several posts about using a car radio
because of the AM reception.

I've also thought about buying a used Grundig receiver, in particular
the S350. I think having the option of listening to shortwave might
be fun. Does this thing put out good audio via headphones?

Thanks.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.shortwave

CDE,

ANTENNA:
You could try building a 'Low Noise' AM Antenna that can
start at near ground level and going up to as far as you
can get it and then out as far as your can make it.
NOTE: This is usually called an Inverted "L" Antenna.
* First install a Ground Rod and a short Heavy Ground
Wire at the Base / Starting Point of the Antenna.
* The Antenna Element was 100 Feet of Landscape Lighting
Cable (Heavy Duty Outdoors Zip Cord).
* Affixed the Two Wires of the Near-Feed-End of the
Antenna Element across a TV 300 Ohm Matching Transformer
and connected them one-to-one.
* Secure the The Near-Feed-End of the Antenna Element and
Matching Transformer using insulators to the Ground Rod.
* Stripped and Twisted Together the Wires of the Far-End
of the Antenna Element and covered them with electrical tape.
* Ran/Routed the Antenna Element from the Ground level
up to the Top of the First / Near Antenna Support.
* Ran/Routed the Antenna Element from the Top of the First /
Near Antenna Support to the Top of the Far Antenna Support.
* Attach 50Ft to 100Ft of 75 Ohm Coax Cable to the other
end of the Mounting Transformer.
* Attached a short Heavy Ground Wire to the 75 Ohm Side
of the Mounting Transformer.
* Ran/routed the Coax Cable from the the Antenna Element
to the your Car Radio's location.
* Terminate the 75 Ohm Coax Cable with an Motorola Connector.
* Plug the Motorola Connector into the Car Radio.
TBL: The Antenna Element is a "Flat-Thin-Loop" that is
Physically 100 Ft Long and Electrically 200 Ft Out-and-Back.

ALTERNATE: To the Random Wire Antenna is to use a CB 104"
Stainless Steel Whip Antenna mounted on a piece of 21Ft Top Rail.
* A proper Antenna Insulated "Mount" is required to be used
between the Whip and the Top Rail.
* Use a 75 Ohm Coax Cable from the the Antenna to the Radio.
* Connect the Center Wire of the Coax Cable to the Whip
Antenna Element and the Outer Shield to the Top Rail.
* Terminated the Coax Cable with a Motorola Plug.
* The Base (Butt-End)) of this piece of Top Rail should be
3Ft-5Ft in the Ground and allow the Top Rail to be Free Standing.
NOTE: The Top Rail is your Antenna and Car Radio Ground.

STEREO HEADPHONES:
NOTE: Since your did not ask about Hooking-Up a Pair of
Stereo Speakers. I assume you know how.

The simplest method of making the connection between the
Car Radio's audio power amplifier Stereo Output and your
Stereo Headphones is using a pair of Dropping Resisitors
with a 1/8" or 1/4" Stereo Jack to match-up with your
Headphones and Two Dropping Resisitors.
THE HOOK-UP: The Barrel of the Stereo Jack is Ground;
Center-Section is the Left-Side Stereo Sound; and the
Tip is Right-Side Stereo Sound. For the Center-Section
and the Tip use an Equal Value Dropping Resistor.
Here is a suggested 'value' of Dropping Resistors for
different basic Headphone Impedances:
* 4 Ohms Headphones = One 43 Ohm One Watt Resistor per Side.
* 8 Ohms Headphones = One 82 Ohm One Watt Resistor per Side.
* 16 Ohms Headphones = One 160 Ohm One Watt Resistor per Side.
* 32 Ohms Headphones = One 330 Ohm One Watt Resistor per Side.

of the AM reception.

I've also thought about buying a used Grundig receiver,
in particular the S350. I think having the option of
listening to shortwave might be fun. Does this thing
put out good audio via headphones?

Thanks.

.

I now have a 751 (non-A) sitting next to my Rick Mish all-Collins R-390 (non-A). Nice set of ears. I'm not licensed, and so don't get to test the Xmit side -- except maybe into the dummy load, but I'd rather not go even _there_.

The reviews mentioned earlier in this thread make me feel even better about getting it, and a little worse about the price I paid the OM I bought it from. It's _mint_. and I paid $250 for it yesterday.

Now I _gotta_ get my ticket! Letting my Novice expire in 1963 was a serious mistake.

If you're talking about HF-only rigs, then I confess ignorance. Ditto
for programs to control DC-to-daylight transceivers.

_But_:

If you have an Icom PCR-1000 (which covers HF, and on up to near
daylight), there are a couple of programs for the Palm to control it.
They worked just dandy on my Palm VIIx, and on the i705 that replaced
it.

It is truly unfortunate that they appear not to work on the Palm
Tungsten series, which doesn't have the serial library built in. While
there _are_ add-on serial libraries available, the ones I've tried
don't appear to actually drive the Tungsten T-3's serial interface.

It's _very_ disappointing, and I'm about to post to the PCR-1000 list
about my problems. *sigh*

## 907. TS-940 strange problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-09 18:01:21 UTC
From: castles@yestertronics.com
Message-ID: <9c88290.0402091001.2cfa81bd@posting.google.com>
Source record: 23559

My TS-940 goes to a state of very little gain. For instance the noise level on 40 meters drops and the received signals are low in amplitude. If I make a noise click with my rotator, (just push the brake lever button so I create a noise spike) the receiver gain immediately comes back up. What in the world could be causing this?

Mike;
If you can still prove your novice license you get the code credit automatically. You can then get a hf license (gen/extra) for the written tests.

Hi guys

MixW multimode software is now into release 2.11. If you are into various "data" etc modes on HF or VHF then it is a good piece of work. Course there are other software's around too.

Check out my software download page:

www.g3vfp.org/download.html

Cheers, and enjoy.

Date: 2004-02-10 00:57:49 UTC
From: Rena <nuclear_stars@hotmail.com>
Message-ID: <h0WVb.57530$3YE1.9609@news04.bloor.is.net.cable.rogers.com>
Source record: 23565

Ever had the thought that if 50,000 people donated to someone a dollar
each, it would be an amazing way to earn a lot of money without anyone
shelling out large sums of cash? Well, it can be done. (So they say.)
=0D
I found this article in a news group, and it makes perfect sense. If you=

follow it's simple instructions, you could make yourself a large amount o=
f
money in a very short time. I do however advise that you look into it
thoroughly to make sure that everything is perfectly legal. (It seems O.=
K.
to me)
=0D
Elias Moussally wrote the following:
=0D
I just read an article in an Internet news group describing how to make=

$50,000.00 in only one month from a $5.00 investment.
=

Of course I thought this was ridiculous ,or some type of pyramid. I talk=
ed
it over with my family, an attorney, and my friends, and they all agreed =
it
was some sort of scam. I hate scams because usually someone gets burned,=

and I didn't want it to be me! I blew it off for a few weeks then saw
another one in a news group I go to a lot and thought, "Maybe this is
legitimate!". Besides, what's $5.00 , I spend more than that in the morni=
ng
on my way to work on coffee and cigs for the day.
=

Well, two weeks later, I began receiving money in the mail! I couldn't
believe it! Not just a little , I mean big bucks! At first only a few
hundred dollars, then a week later, a couple of thousand , then BOOM . By=

the end of the fourth week , I had received nearly $47,000.00. It came fr=
om
all over the world. And every bit of it perfectly legal and on the up an=
d
up. I've been able to pay off all my bills and still had enough left over=

for a nice vacation for me and my family.
=

Not only does it work for me, it works for other folks as well. Markus
Valppu says he made $57,883 in four weeks. Dave Manning claims he made
$53,664 in the same amount of time. Dan Shepstone says it was only $17,0=
00
for him. Do I know these folks? No, but when I read how theysay they di=
d
it, it made sense to me. Enough sense that I'm taking a similar chance
with $5 of my own money. Not a big chance, I admit--but one with
incredible potential, because $5 is all anyone ever invests in this syste=
m.
Period. That's all Markus, Dave, or Dan invested, yet their $5 netted
them tens of thousands of dollars each, in a safe, legal, completely
legitimate way. Here's how it works in 3 easy steps:
=

STEP 1.
=

Invest your $5 by writing your name and address on five separate pieces o=
f
paper along with the words, "PLEASE ADD ME TO YOUR MAILING LIST." (In thi=
s
way, you're not just sending a dollar to someone; you're paying for a
legitimate service.) Fold a $1 US bill, money order, or banknote inside
each paper, and mail them by standard U. S. Mail to the following five
addresses:
=0D
(Remember: It costs more to send a letter to Europe, Asia or so) =

=

=0D
1. Angela Johnson
952 Kipps Lane
London Ontario
N5Y 4S4
Canada

=0D
=

2. Rita Scott
4-10 MacKellar Ave
London Ontario
N6H 5C5
Canada
=0D
3. Coreen Bobbett
584606 Beachville
Beachville, ON
N0J 1A0
Canada
=0D

4. Ben Martine
623 Finch Ave W
North York, ON
M2R 3V4
CANADA
=

5. Ray Parsons
807 East 9th St.
Sedalia, MO 65301
USA

=0D
=0D
STEP 2.
=0D
Now remove the top name from the list, and move the other names up. =

This way, #5 becomes #4 and so on. Put your name in as the fifth one on t=
he
list.
=0D
=0D
STEP 3.
=0D
Post the article to at least 200 news groups. There are at least 1700=
0
news groups at any given moment in time. Try posting to as many news grou=
ps
as you can. Remember the more groups you post to, the more people will s=
ee
your article and send you cash!
=0D
=0D
STEP 4.
=0D
You are now in business for yourself, and should start seeing return=
s
within 7 to 14 days! Remember, the Internet is new and huge. There is no
way you can lose.
=0D
Now here is how and why this system works:
=

Out of every block of 200 posts I made, I got back 5 responses. Yes,
that's right, only 5. You make $5.00 in cash, not checks or money orders,=

but real cash with your name at #5.
=

Each additional person who sent you $1.00 now also makes 200 addition=
al

postings with your name at #4, 1000 postings. On average then, 50 people=

will send you $1.00 with your name at #4,....$50.00 in your pocket!
=

Now these 50 new people will make 200 postings each with your name at=

#3 or 10,000 postings. Average return, 500 people=3D $500. They make 200
postings each with your name at #2=3D 100,000 postings=3D5000 returns at =
$1.00
each=3D$5,000.00 in cash!
=

Finally, 5,000 people make 200 postings each with your name at #1 an=
d
you get a return of $50,000 before your name drops off the list. And
that's only if everyone down the line makes only 200 postings each! Your
total income for this one cycle is $55,000.
=

From time to time when you see your name is no longer on the list, yo=
u
take the latest posting you can find and start all over again.
=0D
So that's it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all day, a=
ll
over the world. And 100,000 new people get on the net every day. You know=

that, you've seen the stories in the paper. So, my friend, read and follo=
w
the simple instructions and play fair. That's the key, and that's all the=
re
is to it. Print this out right now so you can refer back to this article=

easily. Try to keep an eye on all the postings you made to make sure
everyone is playing fairly. You know where your name should be.
=

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T NEED TO CHEAT THE
BASIC IDEA TO MAKE THE MONEY!
GOOD LUCK TO ALL,AND PLEASE PLAY FAIR AND YOU WILL WIN AND MAKE SOME
REAL INSTANT FREE CASH!
=0D
So that's it. Since you are paying for the service of having your name
added to a person's mailing list, you aren't actually giving themmoney. =

So try it out, it's only five dollars, and you never know, it just might
work out.
=0D
!!! REMEMBER: IF YOU SEND A MAIL TO EUROPE, THEN YOU HAVE TO STAMP IT WIT=
H
AN EXTRA STAMP !

Yep. I'm in the 1963 callbook, as established by some very generous
folks. So all I really need to do, rule-and-exam-wise, is swot up the
question pools and find some VEs in the Oklahoma City area. But I
think I really ought to swot up the code, too.

_Really_ looking forward to getting a signal on the air, for the first
time in far too long.

>You can use the speaker wires, however, the audio used to feed the speakers
>will be amplified, and will probably overdrive your headphones. You'll need
>to find a way to match the headphones to the speaker output.

On the other hand, if you are using modern low-impedence headphones,
just attaching them across the speaker wires may work well enough.

Of course, you'd probably want to add a phone jack with an extra contact
to cut the speaker out of the circuit when the phone plug is inserted.
With a little thought, you might even be able to add a resistor or two
to adsorb some of the "extra" audio that went to the speaker.

## 923. 2m usage

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-11 00:51:29 UTC
From: nightowls627@aol.comnojunk
Message-ID: <20040210195129.11625.00001672@mb-m12.aol.com>
Source record: 23575

I am in the market for a mobile 2m rig. I am looking at the ic v8000 (Kind of fond of Icom as I have a 718 too). Anyways, I have been using an htx 420 ht for 2m and am getting bored with the local net. How do I know which simplex freqs are open and what else can I do with a decent 2m rig. Are there any books out there concerning this. I like getting cw qso's but I can't do it as often as I like. So I figured a little fiddlin with a rig in the van will be good. Any suggestions?

Source record: 23578

You can read user reviews of mobile rigs at URL:
http://www.eham.net/reviews/products/38

Simplex frequencies are at URL:
http://ac6v.com/callfreq.htm

If you get an all mode rig -- you can work SSB locally, ragchew and contests.

During sporadic E Season -- folks make long distance contacts several hundred + miles -- but these openings are rare. Folks typically use SSB, but FM will do as well. And some 2M CW activity will be found in large city areas and during sporadic E season.

Another VHF/UHF activity is meteor scatter -- see URL:
http://ac6v.com/opmodes.htm#MS

And of course there is packet radio -- see URL:
http://www.choisser.com/packet/

Folks here in California have worked Hawaii on the VHF/UHF bands (on very rare occasion) -- see URL:
http://hiloweb.com/kh6hme/

If one gets bored on a local repeater -- try leading conversation topics -- History, old cars, wines, food, recipes --- your interests
Example of our repeater -- Technical subjects such as SWR, Antennas, Latest radios, Theory. Operating such as Emergency Procedures and Drills. DX. Contests. History. Dirigibles. Old Cars. Old Timers reminisces. Old Radios. Well you get the idea and some interesting conversations do take place. But starting a conversation about politics or abortion with a stranger can get dicey .

Another idea -- start a net on the local repeater -- like these --- Nets can be of a wide variety of subjects: NTS (National Traffic System), Ham Help, Morse Code Practice, Offroad Nets, Language nets, Youth Groups, Sailors/Boaters, Emergency - ARES, RACES, Microwave, ATV, Facetious Group, Field Day Planning, Swap, Trivia, YL, and many others.
Swap nets are held on some repeaters - yes it is legal to announce equipment for sale or items wanted on Amateur Radio as long as the items are Ham related. Since we use computers for Ham Radio, these have crept into the sell/wanted lists.

Check the ARRL catalog for VHF/UHF Books. See URL:
http://www.arrl.org/catalog/?category=VHF%2FUHF%2FMicrowave&words=

## 929. FS: NOS Heathkit Manuals

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-11 05:11:59 UTC
From: Dave Hollander <n7rk@cox.net>
Message-ID: <4029B99B.904D405E@cox.net>
Source record: 23581
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I recently found a stack of NOS manuals that appear to have been purchased without the kit as the insides are clean and unmarked. Prices do not include shipping.

I will ship overseas.

Heathkit RX-1 Mohawk Receiver Manual - NOS.....$75 plus shipping
Insides are excellent and the 10 foldout drawings are there. The back cover has a small stain in the lower left hand corner and a bit of shop ware. Date on manual is 1959.
http://members.cox.net/radiostuff9/heath_mohawk.jpg

Heathkit Tuner Assembly Manual - Mohawk RX-1.....$75 plus shipping
Insides are excellent and the 2 foldout drawings are there. The back cover has a a bit of shop ware. Date on manual is 1959.
http://members.cox.net/radiostuff9/heath_mohawktuner.jpg

Heathkit 2 Meter Converter XC-2 Assembly Manual.....$65 plus shipping
Insides are excellent and the 8 foldout drawings are there. The back cover has a a bit of shop ware and their is a small stain on the lower left bottom of the front cover. Date on manual is 1959.
http://members.cox.net/radiostuff9/heathxc2.jpg

Heathkit DX-40 Transmitter Manual - NOS.....$75 plus shipping
Insides are excellent and all of the foldout drawings are there. Cover has a bit of shop ware from so many years of storage. Date on manual is 1958.
http://members.cox.net/radiostuff9/heath_dx40.jpg

Heathkit AC-1 Antenna Tuner Manual- NOS.....$50 plus shipping
Insides are excellent and the 2 foldout drawings are there. The back cover has a a bit of shop ware. Date on manual is 1957.
http://members.cox.net/radiostuff9/heath_ac1.jpg

Heathkit MT-1 Cheyenne Mobile Transmitter-NOS.....$65 plus shipping
Insides are excellent and the 4 foldout drawings are there. The back cover has a a bit of shop ware. Date on manual is 1959.
http://members.cox.net/radiostuff9/heath_cheyenne.jpg

Heathkit SB-10 Single Sideband Manual - NOS.....$75
plus shipping
Insides are excellent and the 4 foldout drawings are there. The back
cover has a a bit of shop ware. Date on manual is 1958.
http://members.cox.net/radiostuff9/heath_sb10.jpg

Heathkit HW-19 Manual 10 Meter Transceiver.....$65
plus shipping
This is the ten meter version of the lunchbox (Twoer). Insides are
excellent. The back cover has a a bit of shop ware. Date on manual is
1960.
http://members.cox.net/radiostuff9/heath_tenner.jpg

Heathkit DX-20 Transmitter Manual - NOS.....$75 plus
shipping
Insides are excellent and all of the foldout drawings are there. Cover
has a bit of shop ware from so many years of storage. Date on manual is
1958.
http://members.cox.net/radiostuff9/heath_dx20.jpg

Heathkit CO-1 Code Practice Oscillator Manual.....$20
plus shipping
Insides are excellent and the 1 foldout drawing is there. The back cover
has a a bit of shop ware. Date on manual is 1959.
http://members.cox.net/radiostuff9/heathcpo.jpg

Heathkit HD-19 Hybrid Phone Patch Manual.....$22 plus
shipping
Insides are excellent however their is a small bit of water damage in
the lower left bottom of the pages. None of the page are or were
sticking together The back cover has a a bit of shop ware. Date on
manual is 1958.
http://members.cox.net/radiostuff9/heath_patch.jpg

Heathkit AM-2 SWR Meter Manual-NOS.....$22 plus
shipping
Insides are excellent and the 1 foldout drawing is there. The back cover
has a a bit of shop ware. Date on manual is 1959.
http://members.cox.net/radiostuff9/heathswr.jpg

Heathkit B-1 Balun Coil Manual - NOS.....$22 plus
shipping
Insides are excellent. The back cover has a a bit of shop ware. Date on
manual is 1957.
http://members.cox.net/radiostuff9/heath_balun.jpg

Non-Manuals

Heathkit Catalog - Winter 1985.....$10 plus shipping
Very good condition.
http://members.cox.net/radiostuff9/heathkitwinter1985.jpg

Heathkit Catalog - Winter 1975.....$10 plus shipping
Very good condition.

http://members.cox.net/radiostuff9/heathkit1975winter.jpg

"The Portable Radio in American Life" Book.....$25
plus shipping
This is a 260 page book published in 1991 covers the history of portable tube radios and transistor radios from the 1920's to the 1970's. Includes historical information on Sony, Zenith radio, Admiral radio and many other brands who built portable radios. This is an excellent reference book if you collect portable and transistor radios. This is a new book.

have you looked at PROMA listings

any chance you can send me a copy of that listing

when you say accurate,how can you be sure,i have checked out most of these
over last few years and most are copies of my PROMA listings or UKSD

for really accurate then look at proma database

join the scanpromauk

http://groups.yahoo.com/group/scanpromauk/

also why cant he post this for free or run a limited CD version for a charge

99% of proma is free,but when i try and sell an accurate cd rom to those
who want even more,the moaners usually chip in.

so yes i do sell a cd rom for £5 but its easier if you go online and get
proma stuff for free

# 933. FS: Yaesu FT-817 portable QRP station

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-11 13:38:08 UTC
From: k5dh@raytheon.com
Message-ID: <4fqWb.1$3P3.0@dfw-service2.ext.ray.com>
Source record: 23585
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

FOR SALE -- QRP Station

This is nice, clean gear that has not been abused. I am a non-smoker, and the gear has never been used around anyone smoking.

+ Yaesu FT-817 transceiver, s/n 0K020304, with all standard accessories, box, manual; has YF-122C CW filter and Maha FNB-72 battery (9.6v @ 1700 mAH) installed; battery charges in radio when connected to DC power; NO DAMAGE OR REPAIR HISTORY; also included is a nice laminated quick-reference "cheat sheet".

+ LDG Z-11 antenna tuner, factory assembled; with power cable, coax jumper, box, manual; factory option One-Touch-Tune compatibility kit added; external ground binding post neatly added to rear panel; power connector changed to more common size of same type (original connector included so it can be changed back). This tuner WILL load an end-fed wire when worked against a suitable counterpoise!

+ W4RT Electronics One-Touch-Tune module; attaches to Z-11 with Velcro pad; plugs into FT-817 and Z-11.

+ K1EL model K-10 memory keyer, built by me from a semi-kit, has 4 memories, runs on 4 AAA batteries (included), programmed by inputs from your paddles; built in a tiny Bud box; with interconnect cable and original manual.

+ Boom mic / stereo headset; comfy full-coverage padded earpieces; leather pad on headband; electret condenser mic element; with all necessary cables and homebuilt PTT switchbox; uses stock Yaesu mic cord (which unplugs from the mic head).

+ Homebuilt DC power distribution box; nice long input cable with banana plugs; three separately-fused banana jack outputs.

+ Homemade brackets to bolt FT-817 and Z-11 together; made of lightweight aluminum; uses stock hardware and mounting holes, no mods required to radio or tuner.

+ Homemade tilt stand, made from mobile CB radio mounting bracket, raises front of gear up off table for easy access; non-skid pads on bottom so won't "walk" on you.

+ Very nice padded camcorder case for field transport; entire station fits neatly inside; has storage pockets for everything.

Price is $600 FIRM, plus shipping. FedEx Ground is my preferred shipper, but I'll use whatever method you want to pay for.

Hi Floyd,
Exactly what do you need from the manual? I have a manual
for the 103D, which is the 125kHz to 174MHz model. It is a couple hundred
pages, with fold-out schematics, so it would be quite expensive and time
consuming to copy. If you just need a couple of pages, I can help you.
As an alternative, you can contact Boonton. This is their URL:
http://www.boonton.com/

Maybe a dirty relay, or an antenna,switch, or coax connector hanging
by a thread?..If narrowed down to the radio, I'd look at the relays
first. I don't know if they are cleanable or not..Depends on access,
etc to the contacts. See if maybe you can run a thin strip of typing
paper across the closed contacts if it's possible. MK

Don-

This reminds me of a problem that was reported with the TS-430. According to the report, there is a jack on the back of the radio used for connecting a transverter. It has a built-in switch with contacts that open and/or close when the transverter is plugged in.

The trouble is that the jack's switch contacts never get exercised if you don't use a transverter. The contacting surfaces get oxidized or corroded ever so slightly, resulting in exactly the problem you describe.

The transverter jack may not be common, but there was probably a mate included along with things like fuses, when the radio was new. If you still have it or can get one, try plugging it in and removing it several times, and see if that doesn't help your problem by cleaning the jack's switch contacts.

73, Fred, K4DII

I am interested in buying VHF Engineering boards and parts. Will consider
anything from part to full units.Projects/basket cases fine.
State price and condition.
THANKS !!

There used to be a lot of radio stores in lower Manhatten, but I
believe they mostly disappeared around the time the twin towers were
built for the WTCenter.

You might go to Google and do a search for "ham radio + Manhatten".

Source record: 23453

One thing I want to mention about that generator.....there are 10uF caps in parallel with the large filter caps on the power supply board. When these caps dry out, the -5.2V regulator for the ECL circuitry oscillates. This will cause numerous sidebands to appear on the RF output, along with a dancing display that never seems to indicate a locked frequency.

Pete

Given the tax structure, with a 3% NYC sales tax on top of the 5% NY
state sales tax, many retailers of large ticket items have relocated
outside the boundaries of NYC.

Same thing here in eastern Mass, where many retailers are located just
over the border into "tax free" NH.

Happy trails,

Source record: 23457

Thanks, Pete. I'll take a look for those caps. I know that the 103F supply is different from the 103D because of a previous problem, but the caps could be there. I've got the major problem fixed. There was a fuse hidden inside the RF output connector and it was open. My 103D manual shows a fuse as an option, but I assumed it would be somewhere in sight if it was installed.

K8AC

## 956. Diathermy inteference on 2M

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-13 22:14:37 UTC
From: Steve Nosko <suteuve.nosukowicuz@moutouroula.com>
Message-ID: <c0jibl$ek6$1@newshost.mot.com>
Source record: 23458
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Diathermy was mentioned in the longwire exposure thread and made me think of this long standing problem here in northern IL..

For some years now, there has been interference on the local 2M repeater (145.41) which sounds just like the diathermy I used to hear on 10M long ago. I could tell that it was a crude 60/120Hz. modulated signal which swept through the repeater input frequency.
It is easily readable on the input over an area at least 3x3 miles. No one has had the time to spend and I (with some pretty good equip) only went out a few times (can't spend a lot of time on the way to work... & when I'm off, it isn't very active), but have limited time as well.

. It is more active in the morning rush hour and rarely later in the day and probably never on weekends.

It has to be some kind of RF heating machine, right? Plastic sealing?

Here is a full symptom account to show that I know what characteristics it has.
I took a spec analyzer out and could see the signal sweeping down at least five MHz. (where I had it set at the time). I can hear it sweep through sometimes slowly and sometimes quickly. It so happens that it conveniently slows down and comes to a stop right around the repeater input - sometimes ON the input, but spends no more than 2-3 seconds if it happens to stop there AND stay on long enough. It has a variable time "on"and doesn't always make it to the input freq.
Now that the repeater is using CTSS full time (last Sept or Oct another fulltime input spur appeared!) , it doesn't bring up the repeater. However, you can hear it as it comes into the input across the freq -- if it is strong enough it will eventually capture and the station talking will go away, PL detect dies, the beep goes, then this reverses as it continues through the input freq.

Hi Floyd,
I am glad that you fixed the unit. I burned out the fuse in
my unit, and went through the same process of trying to find it. It is my
favorite generator. I like the fact that it has a separate 1MHz OCXO for
phase locking the unit.

Pete

# 966. Urgent Need: Copy of Manual for Curtis Keyer, Model 8044

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-14 10:05:55 UTC
From: Jim Chumbley <jamesfchumbley@att.net>
Message-ID: <7qmXb.17308$hR.512706@bgtnsc05-news.ops.worldnet.att.net>
Source record: 23468

I would like to buy a Curtis Keyer. These were made during the early 1980s. They were usually sold as a kit, consisting of a PC board about 1 1/2" x 3", and the IC and parts to populate the board. I have most of these, but have managed to lose the manual. I would prefer to buy the assembled PC board with manual, but if you can help me with just the manual or a copy of it, I would be very grateful.

Thanks a lot,
Jim Chumbley, N6UF

Incognito, how do you get there using public transport??

I used to use Barry, but they closed after 9/11.

## 968. Pro and consYaesu FT-1000MP Mark-V ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-14 13:00:17 UTC
From: Thierry <"To answer me in private use http">
Message-ID: <402e1bde$1_1@news.vo.lu>
Source record: 23470

Hi,

In order to complete my last page devoted to a review of the Yaesu FT-1000MP Mark-V available next week on my website
http://www.astrosurf.com/lombry/menu-qsl.htm
I would like to know the opinion of users in a few words.

If you used this Mark-V for more than one year, I would like that you draw me the main positive and negative points of this model in afew words.
Personnaly I think to the next points, but they are probably 5 to 10 more :

+ : 200W, 3 IF stages, many direct access options, many excellent anti-interference tools, efficient and powerful DSP at IF stages, optional Collins mechanical filters, custom multi-function bar graphs, many lights and warning on display and control panel, quick access to memories, double VFO, DSP speaker
- : bulky, outmoded design, outmoded fluorescent digital display (instead of LCD), Menu access to revise, complex Menuing with neither scrolling nor full text, RIT/SPLIT renamed CLAR/VFO RX-TX, external PSU, no bandscope, too complex reset procedures, etc

Your appreciation is welcome.

============
Your best bet would be to place an order with a major outside of NY
City dealer such as Ham Radio Outlet www.hamradio.com and have the
order sent to your address in New York City. The Delaware store
should be able to get it there within one or two days via United
Parcel Service, plus, on orders over $100.00 there is no shipping
charges added.

I would also recommend KJI Electronics in NJ. You can see their website at www.kjielectronics.com. Very well priced, major Icom dealer, but can get other brands on order. Call to arrange. They are about one hour out of New York City. Advanced Specialties mentioned by others is more local, but doesn't have the selection that KJI does.

Jim,
If you can't find a manual, this Curtis Application Note for the 8045 might
be useful:
<http://www.hy-gain.com/man/mfjpdf/CK-8045ABM.pdf>
MFJ bought out Curtis in 2000.

Source record: 23478

Pete - I wonder what you find that 1MHz input useful for? Does that allow you to lock the oscillator in phase with the external oscillator ? If so, how do you use that capability?

By the way, I located the four 10 mF caps you mentioned in the power supply and will replace them today before I button up the unit again. While this 103F is very much the same as the 103D, there are some unusual differences. The frequency ranges are different and the upper limit is 100 MHz instead of 175 or so. Also, there's no sweep capability. The metal tag on the unit indicates serial number 1, and has a contract number scratched in, so I wonder if this wasn't a one-off that was never produced in quantity.

Good luck! I've seen similar 110W Spectra setups (granted, not
lowband) go for less than that.

I am looking for a ham operator that I bought a two meter big
wheel horz antennas from several years back. I bought the ant and
promptly had to set it aside. In the last couple of months I installed
the antenna, and would like to purchase another. But,,,, this is ALL
I recall about the ham, I made the purchase at Belton Tx, five or six
years ago (?) and he told me he worked/retired from Icom/Icom shop?
and he is from Corinth Tx. He built 440/144/ and six meters (Ithink)
At THAT time he was in a wheel chair.
Would appreciate any and all help in contacting. C. Lorentson

That external 1MHz input is useful if you want to lock the generator to a Cesium or Rubidium standard. As an example, if you are doing frequency hop tests with a synthesizer, you can use the same reference for both the generator and the synthesizer. This way, it makes it easy to measure settling time. On another note.....I don't have too many spare parts for these units, but if one of your ECL 10K devices ever dies, I do have some of them on hand. I haven't run into a dead one yet, and I hope that the 10116 device never dies (the one with the heat sink mounted to it), because I don't have any of those.

Hi,

With the same layout as my previous Kenwood TS-570D review, here is the one
of the Mark-V.
http://www.astrosurf.com/lombry/qsl-yaesu-ft-1000mp-mark-v.htm

I know, I am not really in time to present you my review, but it is better
now than never, all the more that I decided to replace my TS-570D some
months ago by this new RTX ;-)
New HR closeup pictures will be added soon.

Any comment is welcome (mainly bugs, difficulties or problems encountered)
or subject that you consider of the uttermost importance...

Hi,

I have one friend here in LX that sells in FT1000D (he own the Mark-V too ).
The price requested if probably not cheap yet...
NB. In Europe the argus rate this model at 1940 euros and decreasing.

# 1001. Tektronix 2235 Intensity Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-16 00:14:36 UTC
From: "John B"
Message-ID: <MXTXb.5512$aH3.177112@bgtnsc04-news.ops.worldnet.att.net>
Source record: 23403

Recently purchased a Tek 2235 (does not have military option). It displays both traces ok as well as a square wave on both channels. Both traces respond to the 'A' intensity control, while the 'B' intensity control has no effect. Has anyone else experienced this problem? Both the 'A' & 'B' intensity control pots check out ok. Voltage at the base of Q814 varies when the 'B' pot is turned as well as the output voltage on the emitter of Q814. Voltages here are correct too. There is no voltage change at the node of anodes CR818 and CR820 while turning the 'B' pot, but it does change here when the 'A' intensity pot is turned. I've checked all related diodes --CR818, CR820, CR805, CR817, CR816, CR680, etc., and related resistors. Q586 is biased and stays on in "Ch1", "CH2", and "Both" positions, at least as far as I can tell with the voltmeter. I don't see any components with visible damage, but there is a place on the board that is brown from heat around Q254, Q255, Q256 which is the Vertical output to CRT section. I'm guessing that this is unrelated to the intensity problem. any help or ideas would be greatly appreciated.

Thanks,
John

From: k9sqg@aol.com
Message-ID: <20040215203810.21805.00001674@mb-m25.aol.com>
Source record: 23405

Have a Nye Viking MBVA tuner for sale. Some of the lettering on the front panel is "weak", but other than that, it is in excellent condition inside and out. No arcs, burns, worn spots on the inductor, etc. Auto SWR meter works fine and wattmeter tracks with my Autek WM-1 and also auto switches between 300 watt and 3 kw ranges. Have a good photocopy of the manual. Unfortunately, I don't have digital pictures. $500 shipped continental US only.

Thanks for reading the posting.

73s,

Evan

hello,

i am offering the following for sale to hams in the 48 states only. prices are plus shipping. offers accepted. not interested in trades. selling to buy a ten tec qrp rig. wanted to offer to the newsgroup. if it does not sell, off to ebay.

1. Kenwood TS-830S 100 watts all bands. 10 meter portion of band switch needs cleaning. this is the main rig in my shack. comes with cw filter and pc-1a phone patch. copy of manual. $400.00 plus shipping. picture available upon request.

2. MFJ 3 Kw roller inductor tuner. works and looks 100% no longer have an amp. $200.00.

3. Hammarlund hx-50. missing one small knob. needs re-paint. selling in unknown condition. my intent was restoring it, however, you know the deal. too many projects..... you don't see these alot. asking $100.00 plus shipping. worth three to four times that if it is working.

4. knight kit t-60. needs work. $30.00 plus shipping.

5. knight kit r-55a receiver. looks and plays well. original paperwork. $100.00 plus shipping.

reply email. all items sold as is. first come, first served and all the usual disclaimers.

tnx for reading, mike

Here it is again. What is it about the states of Alaska and Hawaii
that confuses people.

Both are U.S. States. They use American money. UPS, USPS, and
Fed Ex go there. There are no customs statements to fill out.

USPS charges the same to ship there as, say, California or Nevada.

Anything that will go wrong with a deal to Alaska or Hawaii could
also go wrong with Michigan or Louisiana.

There is no difference between Alaska, Hawaii, and New Mexico or
Maine.

Will someone please explain this 48 state stuff?

What's the story?

Unless something has changed dramatically, the shipping for packages isn't the same at all. The last time I shipped something to Hi many years back (An old Yaesu 560) I was shocked by the amount that it cost to ship. And UPS ain't no bargain to begin with!!

# 1012. FT1000, roofing filter ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-16 16:08:00 UTC

Hi,

Question to specialist and users of the Yaesu FT-1000MP Mark-V

The Mark-V has 3 IF stages + a so-called 4th, the DSP. The Collins filters
are installed at 2 and 3st stages. What become
the filtering at the 1st stage ? Never see, never use ?

NB. To confirm, its 1st IF is at VHF frequency and use a filter always
connected, referred to as a "roofing filter" like in the Ten-Tec (probably
15-20 kHz wide). But I have no more infor about it.

Isn't there a way to use that filter to enhance still more the audio and
extract weak signals from QRM ?
And no way to replace it with a high Q Collins ?

I don't know about UPS and Hawaii but USPS and Puerto Rico follow the
same rate chart as the mainland. Those of us who live outside the '48'
tend to be aware of the costs and if we're the ones paying I don't see
why there should be a limitation by the seller.

Yes? Buyer pays shipping.

Yes, UPS can be expensive when you use their retail stores or
affiliates but one secret is that there are TWO UPS rates. You can
get a lower rate by shopping around or opening your own account.

USPS charges the same once you hit the max.

But, Buyer pays shipping.

I'm guessing that the aging ham population thinks that Alaska and
Hawaii are still Territories.

Well, I've had more trouble doing deals with Florida.

# 1020. Are Alincos Throw-Away Radios? (Finding a DJ-C5 Battery)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-16 19:47:39 UTC
From: Steve Wolf <news@w8iz.com>
Message-ID: <10327kq6imteh8f@corp.supernews.com>
Source record: 23422

Can anyone suggest a source for the battery shown at
http://www.w8iz.com/ham/alinco/alinco%20battery.htm

I have two Alinco DJ-C5 radios that I use both at home for fun and at work for monitoring business frequencies. I now need a new battery. Alinco parts quotes the battery at $48.00. The radio is worth $150 new. The battery represents one-third of the value of the radio.

The local and Internet ham radio battery shops do NOT have this battery. Alternative ideas are also solicited. Obviously I don't want to carry a bulky pack but even something less expensive that can be taped to the back would be fine. For example, a Pentax L-LI8 pack (~$8.00!!!) could be taped to the back of the radio. That battery is shown at the bottom of the page. Where could I get a battery clip to allow me to easily install and remove such a replacement? Another replacement was found on page 1130 of the Mouser #617 catalog (part 521-7PN (at a cost of $6.72!!!)). It would fit inside the case but would it charge properly?

I bet this Alinco battery is also used as a camera battery. The question is how to find it.

Thanks,
Steve, W8IZ

The NP-60 battery looks like a close fit - 2-1/16x1-3/8x1/4".
It's 3.6-3.7v, 900-1100mah, depending on which one you get
(several brands). They can be found on eBay for less than $3!

The NP-60 battery is an exact fit in the Yaesu VX-2R micro
HT. Go to your local ham shop and check out the battery that
comes with the VX-2R - it might work for you.

The only problem I see is the higher capacity of the NP-60. I
don't know what the Alinco charger would do to it. Still - at
less than $3 a pop, I'd give it a try!

How long does it take that boat to get to Hawaii?

I used to ship stuff to England, and it was 4 months by "ground."

From: Ken Knapp <kenknapp@youcantspammeyoudumb.bot>
Message-ID: <1032tspm0jteq2e@corp.supernews.com>
Source record: 23436

Hi All -

I just have too many radios so I'm making room. I have this Hallicrafters 8R40 which is in pretty nice shape and works. Vintage around 1953. It's general coverage and pretty clean. Probably the worst problem it has cosmetically is some of the labeling on the knobs is worn some and the chrome bezel has some tarnish. Otherwise it's in really good condition. IMHO it's probably around an 8 out of 10.

Because it's a tube receiver and is on the heavy side it would be on the difficult and pricey side to ship so I'd prefer it be picked up. I live in Herrick Center, Pa. 18430, in the Scranton area. Any takers for $75.00 and you come and get it?

Thanks,

Ken
To fool the bots my email is skyking at nep dot net.

It's kind of the joke/rule of ham radio, you never, ever, buy a battery
from the company that makes the radio, no matter who makes it. They are
almost always at least double what the same battery costs anywhere else.

A friend recently bought a new HT, and had the guy on the phone add two
batteries to the radio and charger he was originally buying, without
asking the price. When the radio came, the radio and charger were
cheaper than the two batteries were! He forgot about the rule.

Hi,

We all know how strong can be the RFI generated by BPL. I suggest an idea to ITU commissioners. The best solution to ensure our defense should be to have in our camp some statemen, lawyers, Broadcast/Electronic companies CEO, and celebrities who should be licensed hams too.

This is maybe a na&#65533;ve proposal but the weight of these tens of famous people might weight in the balance.

All use either amateur bands or more generaly the electromagnetic spectrum and can arg against any abuse and will more than probably support our community. Here are some of them extracted from a file that you can read and download at http://www.astrosurf.com/lombry/qsl-rfi-bpl-famous-hams.htm

Statemen, politicals, lobbyists, lawyers :

JA5FHB, 7M3URU, K4TPJ, K6ARO, K7NYD, VK2KB, WB2AQC, WD5DVR, YU1RL

without to forget George Pataki, Governor of New York 1994-present, call reassigned

Royalties :

9K2CS, EA0JC, HS1A, HS1D, I0FCG, LU1SM, JY1NH, JY2HT, JY2RZ , SU1SV

Large spectrum users :

- John Scott Redd, Vice Admiral, former chief of all USN forces in Persian Gulf (94-96), alias K0DQ

- General Francis "Butch" Griswold, leader of the US Strategic Command, alias K0DWC

- General Eugene E. Habiger, (ret.) commander in chief, U.S. Strategic Command, alias K6EWP

CEO of companies related to telecommunications :

- SONY US, K1OKI

- Apple Computer, K2HEP

- Altavista Search Engine, N9FZX

- Motorola's satellite systems group, WA7UKR

Scientists and inventors :

- Samuel F.B. Morse III, alias W6FZZ

- Dr. Russell Alan Hulse (pulsars), WB2LAV

- Guillermo Gonz&#65533;lez Camarena (TV), XE1GC

- the hundreds of astronauts an cosmonauts

- the 10% of radioastronomers at NRAO who are hams

TV/radio producers, directors, journalists :

- Tony Randel, (TV/movies), K6BBC

- Roy Neal (TV personality/producer), K6DUE

- Ernest P. Lehman, (Writer/Producer/Actor/Director), K6DXK

- Ben Moses (TV/movie producer/director), W6FY

- Samuel G. "Sam" Brown (Broadcast TV and radio news journalist), WA4IUM

- William F. Baker, (WNET TV), W1BKR

and many others.

> from the company that makes the radio, no matter who makes it. They are
> almost always at least double what the same battery costs anywhere else.

Safety/reality check:
The Alinco battery is built into the radio. There is no battery pack,
this is the 'credit card' radio with built-in battery.

This means that replacing the radio is easy: remove two screws,
take off the back cover.

The more serious issue (VERY SERIOUS SAFETY ISSUE) is that it's a
LiIon battary. Charging these is a lot more difficult than NiCd/NiMh
and wrongly trying to charge it could cause the thing to explode.
For this reason, the charger is specially built and doesn't easy fit
on other transceivers.
Don't try to charge LiIon cells on NiCd chargers w/o good fire insurance,
I don't know about the reverse.
At any rate, the voltage/capacity rating of the original pack is
probably very difficult to find with NiCd cells so stay with LiIon.

This is freaking me enough that I'd be very careful replacing it with
a battery of the same capacity (and probably size).
I think you will find that the market for replacement LiIon batteries
is a lot more complicated, for the safety issues above; you can't just
replace them easily.

In that light, $48 for a replacement is not that bad though still
expensive. Check the service manual (which is online), but I'd
consider the original replacement. I suspect you had plenty of lifetime
from the old battary.

Hope this helps, 73

# 1046. Re: Are Alincos Throw-Away Radios? (Finding a DJ-C5 Battery)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-17 14:39:18 UTC
From: Steve Wolf <news@w8iz.com>
Message-ID: <10349srr6v2f04e@corp.supernews.com>
Source record: 23348

There is some confusion. This battery pack isn't a plastic-encased slide-on nickle cadium version containing individual cells. This is an internal pack. It is lithium ion. You can't solder to it. It is encased in stainless steel. On the other side it performs better. It lasts longer. It is "better behaved" than Ni-Cads ... as long as you don't mess with it ... then it blows up.

Good suggestions so far:
My own: The Pentax battery charged in the widely available Pentax charger. The tabs are copper.
Andrew: A StarTac pack in a StarTac charger.

Although $50 for the pack is the best way, I can buy eight Pentax batteries and a charger. For the same price I could throw seven of the Pentax batteries away and still have one battery either way.

>It used AA cells instead of a more expensive battery pack.

Definitely a valid consideration. There's a lot to be said for
sticking with commodity power solutions, especially if you're into
emergency communications. Being able to refill your radio's power
pack with AA's from the local drugstore can be a big advantage under
adverse circumstances

On the other hand, lithium-ion batteries have a significant advantage
in terms of storage capacity per size and storage capacity per weight,
compared with NiCd cells and batteries. I believe they also win out
over NiMH - the margin is less but is still significant.

I have an Icom T2H which I won in a raffle. I also have a Yaesu VX-5,
with its pricey Li-ion battery. The T2H's battery holder, when
stocked with generic NiNH batteries, weights just about as much as the
whole VX-5 including power pack.

$ 45 is outragous for the battery pack when you can get 4 of the AA cells
and a charger for under $ 20.
That is one reason why I picked one digital camera over another brand.
It used AA cells instead of a more expensive battery pack.

That Pentax battery in the picture is the one that runs my tiny Pentax Optio-S. I can get them on eBay for a couple bucks. I have a number of batteries for it and they are cheaper than the AAs, last longer, and behave better. I was also **VERY** concerned and figured that I was going to get had on the batteries. I was pleasantly surprised. Even more so now that it appears the Pentax batteries will be powering my Alinco radios.

This radio resides in my shirt pocket. Even if I could find a rechargeable AA lithium ion, it would not be for $0.36. It would not fit in my pocket as nicely as a slimmer lithium ion battery such as the Pentax. A zinc-carbon battery pack would retrograde both the size and performance of the radio.

Why don't you spam the groups a few more times with your stupid ebay
auctions? Be sure and let us know every 15 minutes in the last two or
three hours, maybe you will make another buck.

## 1066. HT220 frequency swap

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-18 04:06:42 UTC
From: ned <thearkie@fastmail.fm>
Message-ID: <5ro5309lnct3lr46sqhmi1hpc71abejk75@4ax.com>
Source record: 23368

I currently have an HT220 setup to xmit/rcv on 151.xxx. Would like to use it as a backup radio for police work on 156.xxx. Is it feasable to convert this old radio or a waste of money? It is suggested I just buy a new $200-300 radio. I'm sure I could install new crystals, but is there more required?

# 1067. Best Rig for CW?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-18 05:17:20 UTC
From: Pete Holden <peter.holden@comcast.net>
Message-ID: <AzCYb.58403$uV3.248805@attbi_s51>
Source record: 23369

A few years ago, when I was really getting fired up for ham radio, I bought an IC756. Well, as time has passed I've settled in on what I really like. I don't do contests, don't do SSB, no AM or FM, no RTTY, etc. I just do CW. Okay, not straight key, but I just like CW and mostly on either 20 or 15 meters.

I don't need memories or computer control or whatever. I'm just looking for the best rig for CW. I want something that will dig a signal out of the QSB, QRN and QRM. I read a lot of guys raving about their QRP rigs but I do want something that'll run 100 watts.

Now, I'm not necessarily looking for an inexpensive rig. In fact, maybe my 756 will do as good a job as any. If that's the case, tell me.

Suggestions please.... Thanks, Pete

I just made a VERY VERY curious discovery on the URL
I posted in the original thread.

It seems that a company
in Hong Kong called Maxima Communication Ltd
is actually the OEM for several brands of Icom, AOR,
Kenwood and Alinco ham radio products !!!

(Among these are the Icom IC756-PRO and the Yaesu FT-1000MP !! )

I am sure all you hams reading this who paid BIG BUCKS for
a "Japanese made" Icom or Yaesu actually paid for a radio
that was made by Maxima in Hong Kong.....!

(as soon as it gets an Icom or a Yaseu Japanese
name on it, plus made-in-japan, the price is
inflated BIG TIME ???)

Check it out 4 yourself boys!

http://www.maximahk.com/fpage.html

PROOF HERE! http://www.maximahk.com/pframe.html

....and all this time I bey you thought U were
gettin a "genuine" Jap radio! You hams been paying
Toyota and Subaru prices for a Kia and a Hyundai
all this time !

>
> Will someone please explain this 48 state stuff?
>
> What's the story?

The 'story' is TIME. NO ONE in Alaska or Hawaii wants to
WAIT for 'ground' delivery, which is what is usually quoted
in the shipping price. Maine is 7 days TOPS. NOT weeks
like AK and HI are.

I asked at the Post Office, TODAY, in person, and found
that GROUND to Alaska is 4 weeks!!! So that means that
if I quote you 'parcel post' or 'Priority' - it makes NO DIFFERENCE
and will take a month to get to Alaska. Even WORSE for
Hawaii- 4 to 6 weeks.

So that means 'I'll pay the shipping at the rate quoted but if you
don't live in the lower-48, and you want it before summer, you
will have to cough up more money'

On the other hand, if I quote 'any state in the union' that means
that 48 states will get a VERY HIGH price just to make 'one price
for all' work for AK and HI.

Pretty simple. Go to www.usps.com and enter your own shipping
info and you'll see. It's really a simple issue.

Dave

#snip#

The Maxima Communications pages describe themselves as a "distributor"
for the lines you mention, and a bunch of others. I don't see any
specific information which indicates that they are actually the
manufacturer.

I grant you, it's quite possible that many of today's amateur radios
have some of their board assembly done in China, or in some cases even
the entire radio manufacture done there - this is common enough in
most fields of consumer electronics. However, I don't see reason to
believe that Maxima Communications is the factory or OEM, based on the
site whose URL you posted.

That's pretty bad.. I get stuff over here (Korea, at my APO) in 7 to 10 days
via USPS Priority mail. Sometimes it even gets here faster. Just got a
radio in to repair for a friend, he sent it Parcel Post from California, and
it got here in 6 days (delivered to ME, and I'm sure it sat at least a day
on each end in transit).

It seems MANY more have looked at my "ebay crap" as you call it because of posting on some newsgroups. Seems more bid on "my crap" because of posting here and there.
And my thanks go out to them!! Also, it seems there are MANY more normal, descent people who just read these groups
and never bitch about anything. Those people make these groups.
If you don't like my (or other peoples ) postings, well, to bad, use a filter so you don't see it as I am filtering you out now.
You are a pimple on the ass of these newsgroups.
You are truly a sad, jealous person who seems to have the need to pick on people because nothing good
is going on in your pathetic life. After puberty, you should try to find a good women and find your way to church.
Again, you will be filtered out in seconds.
bye bye chump.
P.S. below is just for you...

Hi, only a few hours left, take a look if you like.

I really appreciate the seller attempting to prevent me from suffering inconveniences by having to wait so long but since I live here and am accustomed to the time it takes I don't think I need that courtesy - or else I wouldn't want to buy the item in the first place.

USPS Parcel Post can 'officially' take as much as 4-6 weeks to this location. It rarely does. In maybe 50% of the cases its as fast as Priority (3-4 days) and in six years here I can think of only a few instances where it took a month. Never 6 weeks. So in a way its kinda like pot luck but if I need it guaranteed faster I can pay for Priority.

I have never asked or insisted that a seller send me something at his "48 state shipping included price", nor would I. The only time that backfired on me is once when the cost of shipping here was LESS than his "flat rate CONUS" figure.

It is indeed "pretty simple". No problem in having a flat rate for the 48 and anybody beyond pays the actual tab. Be advised that a USPS item from New York to California costs the same as one from New York to Alaska so often there is no difference anyway. What doesn't make logical sense is "buyer pays shipping, CONUS only" unless the seller has no access to a post office.

Look at the K2/100 or the Orion. Their numbers have
been published this year in QST. The TenTec mailing list
has lots of stuff on the Orion and I believe there is a K2 list which is
just as glowing.

OK, thanks for the explanation Dave and thanks for the research.

Like the WMD in Iraq, which were the basis for a war and have not
been found, it seems that the postal issue has been imagineered like
Cheney, Rummy, Condi saying, "b-b-but, we thought he had WMD, he
could have made WMD, so that proves we were right."

Here's some stuff to mull over.

1) everyone in KH6 and KL7 knows how long it takes to ship items. The time is not an issue to them. If it actually takes a month, they understand. No need to protect them from the shipping delay by declining to sell to them.

2) USPS quotes the same price from FL to CA as to HI and AK. It might be counter-intuitive but there are a lot of things about shipping that are counter-intuitive. HI and AK are called Zone-8.

3) USPS priority mail to HI and AK is 2, 3 days from anywhere in the U.S. Your post office told you wrong. It's not a guarentee like Fed-EX but it's not a month either. USPS surface, the old 4th class, can take a couple days or it can take a month. There is no guarentee. Priority Mail is just as fast to HI and AK as it is to UT or IL.

4) Generally buyer pays shipping. If the price is quoted as $20 for slow-ground, and HI or AK want it sooner, they pay. They expect to pay a more to upgrade the shipping. Buyer pays shipping. Similarly, if the buyer is just down the street, they usually will drive by and pick the item up, and not pay the $20 or whatever.

5) Seems odd to say "lower 48 only" and claim that the restriction is because AK and HI buyers don't want to wait a month, which only applies to certain mail classes. Let them decide.

6) A couple years ago, I had a offer of a free (used) generator. It would have been shipped from Oregon to the East Coast. As this was a heavy item, it turned out that the shipping was more than the item was worth. In this case, as the receiver of the goods, I decided that I didn't want to pay so I passed on the item.

More on the counter-intuitive. Large, heavy, bulky items can be shipped to Hawaii and Alaska on freighters. These are the cheapest form of shipping. It is so cheap that it probably costs less to ship an item to Hawaii and Alaska than it does to ship it from, say, Chicago to Atlanta.

The cost driver on shipping isn't the distance, it's whether it goes by boat, which is cheap, or by truck, which is more expensive. Rail is in between the two. Air is more expensive.

Air Freight is expensive but it isn't as expensive as people think. Perishables, eggs, fresh chickens, lettuce, are shipped to Hawaii in refrigerated 747 and DC-10 air freighters. High value cars are shipped by air too. I know a fellow who shipped a $100,000 car by air to his buyer.

Just a suggestion. When selling, please include KL7 and KH6, just say, "buyer pays shipping or U.S. only". Please, everyone, drop the "Lower 48". That's unnecessary.

Flat out great CW....no frills??
I'd look for a Ten Tec OMNI V.
But, if you already have a IC756, why not make do with that?
Just jam it full of filters for CW.
The PRO, the ORION, a 1000D, all are nice rigs as well...but a lot of
money to spend for a bunch of features that may not interest you.
....Dave

# 1082. FT707 ALC problem...help!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-18 13:06:44 UTC
From: ablight@alphalink.com.au
Message-ID: <1fc7b362.0402180506.2409a431@posting.google.com>
Source record: 23384
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Hopefully someone has seen this before, or can offer a starting point to trace it down. (or a plausible theory - I'm getting that pissed off)

Problem - on some bands but not all, on TX SSB the front panel ALC meter doesnt work - the TX still has output, but very distorted and splattery EXCEPT if you go to the very top of the band via the VFO when it miraculously works. Looking at the ALC control line on the cro, when working a variable (speech rate) almost DC voltage is applied to the relevant ALC inputs to the RF and AF and IF boards. In the fault condition there is a modulation patttern on the ALC signal, in step with speech peaks.

What gives - my theory falls over on this one, I suspect the LPF on the output of the PA amp has gone faulty (as evidenced by VFO settings) but to pull it to pieces to check is going to be a real pain - this thing was designed by evil minded dwarfs who were determined to make life difficult in servicing - try and do ANYTHING with the front panel parts, or the rear PA module, and wires come loose and generate more faults - this it has done a few times now, so its getting very frustrating and time consuming!

As I said, on some bands it works, but on 80 and 15 (from memory, its 5 past midnight here at the end of a long day...) and the "where it is in the band" symptoms dont help either.

Any helpful suggestions, feel free to chuckle and be glad its not sitting on YOUR bench....

As is the tendency to not ship to military APO/FPO, which is the same as shipping to either SFO or JFK, and are technically in the mainland US....

I'd just look at the Ten Tec offerings, as they pay a lot of attention
to CW operation. The Orion, Jupiter or Argonaut V. Also, email Ten Tec
for their used/demo rigs -- they take older Ten Tecs in for trade and
resell them w/30 day warranty.

On the other hand, will any Ten Tec do better than your 756, loaded
with good cw filters? Hard to say.

While I agree with your timing on shipments to Alaska and Hawaii - been
there done that - I disagree on your theory of one price fits all. Simply
state - BUYER PAYS ALL SHIPPING. Then charge them what it is to THEIR
location.
By saying that - I'm NOT including any costs you may charge for packing, if
any. So for example... if I have a tube tester up for bids and let's say two
people are potential winners - one in Alaska, the other in N.C. - a dead
heat in bidding. They ask me the cost to ship. They supply the zip code, I

give them the cost to their respective locations - regardless what it is. "I" do not charge to pack. So all I would bill them for is the shipping which WILL include insurance. I NEVER ship without insurance and at least Confirmation of Delivery. Now, having been given the cost to ship, it is up to that bidder to continue to bid for a win. "I" will ship to the US or Canada (if need be). I dislike the paper work of Canada, but I'll still ship there. But I'm not a great fan of shipping to the other countries. I suppose if they want to pay the price, I'll do it. But for now, I've done all of the US with no problems. In all of my shipping quotes, usually I'm on the money 98% of the time. There are those few times I've been within a $1 plus or minus on cost. If it is a $1 more, I eat it. I find the right size container, packing materials and use a good postal scale. Prepack, weigh and measure. Plug all info into the shipper's web site. I do pretty good. It doesn't have to be rocket science. I've shipped many items and I have yet to have any problems with a package getting to it's destination or any arguments in cost. I did get thrown off with the deal to Alaska though... I was told something like 8 days and as you pointed out, it was 4 weeks. A HELL of a huge difference. I believe that was before the Postal went cyber. MNS.

A few years ago the CW guys liked the T.T. Corsar II. I think you can
still find them around for $600. Good rig with a clean recever if you
don't mind not having bells and whistles.

# 1088. Re: FT707 ALC problem...help!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-18 17:51:18 UTC
From: Bob <balbert@access1.net>
Message-ID: <FYmdnfn5H6RoOK7dRVn2gA@ecrii.com>
Source record: 23390
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

I would guess the PLL is going out of lock. Do a careful alignment.

When the PLL is on the verge, the signal gets distorted and unstable.

If there is no ALC, it's probably because there isn't enough power output to overcome its threshold.

Just a guess; I've never worked on one of those rigs.

Bob

# 1089. Value of ETO Alpha 77 amp ?

My Icom R-75 is clearly marked in several places: "Made in Japan".
Exception to the DC power supply, which is marked "Made in Taiwan".

Thanks for all your input. I do a lot of RVing and lug my IC756 in and out of it all the time. I was just wondering about getting another rig for the RV to run my Hamstick.

Thanks, Pete

# 1095. Re: HT220 frequency swap

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-18 21:29:42 UTC
From: Eddie Haskel <wiseguy@clever.com>
Message-ID: <aPQYb.27407$%F6.11068@newssvr25.news.prodigy.com>
Source record: 23397

The old HT-220 will move from 151.xxx to 156.xxx pretty easy. In fact you might find the rx works before you tune it up.
The "Mid-Split" model went from 150-162Mhz if I remember correctly.
Transmitter tuning is very straight forward, all test points tune for max on the meter. RX tuning is pretty easy too, however STAY AWAY FROM THE DISCRIMINATOR. The "Front end" on highband (your model) is simple and easy to tune.
A special antenna adaptor is needed to connect a power meter to the HT-220. While they are rare, you CAN tack a lead to the antenna spring and ground nearby instead. It's not "proper" but it will work.
Check out www.batlabs.com for more info and people that know Motorola's all too well.
Hope this helps! Eddie (still owns a 6 channel HT-220)

You might check out the Alinco DX-77T. If you read the ARRL review,
they were quite taken with the radio for cw. New about $550 used and in
good shape around $400.

## 1102. BP-84/BP-85 battery pack question.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-19 02:51:40 UTC
From: AA456 <aa456@hay-net.net>
Message-ID: <403424BC.C218C8D5@hay-net.net>
Source record: 23304

I was wondering how to take apart either the BP-84 or BP-85 battery pack in older to replace the ni-cad cells. I've tried the method that I used to use on my older Yaesu battery packs (freezing them for few days and them lightly tapping them open) but the Icom packs have completely defied all efforts to open them. The local battery rebuilder refuses to touch them saying they can't guaranty not to damage the case. Any takers????

I found a stack of NOS manuals that appear to have been purchased without the kit as none have the check marks for assembling the item. Finding an unmarked manual is rare unless you happen to come across an unbuilt kit. Prices do not include shipping.

I will ship overseas.

Heathkit RX-1 Mohawk Receiver Manual - NOS.....$75 plus shipping
Insides are excellent and the 10 foldout drawings are there. The back cover has a small stain in the lower left hand corner and a bit of shop ware. Date on manual is 1959.
http://members.cox.net/radiostuff9/heath_mohawk.jpg

Heathkit 2 Meter Converter XC-2 Assembly Manual.....$65 plus shipping
Insides are excellent and the 8 foldout drawings are there. The back cover has a a bit of shop ware and their is a small stain on the lower left bottom of the front cover. Date on manual is 1959.
http://members.cox.net/radiostuff9/heathxc2.jpg

Heathkit AC-1 Antenna Tuner Manual- NOS.....$50 plus shipping
Insides are excellent and the 2 foldout drawings are there. The back cover has a a bit of shop ware. Date on manual is 1957.
http://members.cox.net/radiostuff9/heath_ac1.jpg

Heathkit SB-10 Single Sideband Manual - NOS.....$75 plus shipping
Insides are excellent and the 4 foldout drawings are there. The back cover has a a bit of shop ware. Date on manual is 1958.
http://members.cox.net/radiostuff9/heath_sb10.jpg

Heathkit HW-19 Manual 10 Meter Transceiver.....$65 plus shipping
This is the ten meter version of the lunchbox (Twoer). Insides are excellent. The back cover has a a bit of shop ware. Date on manual is 1960.
http://members.cox.net/radiostuff9/heath_tenner.jpg

Heathkit CO-1 Code Practice Oscillator Manual.....$20 plus shipping
Insides are excellent and the 1 foldout drawing is there. The back cover has a a bit of shop ware. Date on manual is 1959.
http://members.cox.net/radiostuff9/heathcpo.jpg

Heathkit HD-19 Hybrid Phone Patch Manual.....$22 plus shipping
Insides are excellent however their is a small bit of water damage in the lower left bottom of the pages. None of the page are or were sticking together The back cover has a a bit of shop ware. Date on manual is 1958.
http://members.cox.net/radiostuff9/heath_patch.jpg

Heathkit AM-2 SWR Meter Manual-NOS.....$22 plus shipping
Insides are excellent and the 1 foldout drawing is there. The back cover has a a bit of shop ware. Date on manual is 1959.
http://members.cox.net/radiostuff9/heathswr.jpg

Heathkit B-1 Balun Coil Manual - NOS.....$22 plus shipping
Insides are excellent. The back cover has a a bit of shop ware. Date on manual is 1957.
http://members.cox.net/radiostuff9/heath_balun.jpg

Non-Manuals

Heathkit Catalog - Winter 1985.....$10 plus shipping
Very good condition.
http://members.cox.net/radiostuff9/heathkitwinter1985.jpg

Heathkit Catalog - Winter 1975.....$10 plus shipping
Very good condition.
http://members.cox.net/radiostuff9/heathkit1975winter.jpg

"The Portable Radio in American Life" Book.....$25 plus shipping
This is a 260 page book published in 1991 covers the history of portable tube radios and transistor radios from the 1920's to the 1970's. Includes historical information on Sony, Zenith radio, Admiral radio and many other brands who built portable radios. This is an excellent reference book if you collect portable and transistor radios. This is a new book.
http://members.cox.net/radiostuff9/portableradiobook.jpg

Thanks for looking.

Book - "The Portable Radio in American Life" .....$25 plus shipping

This is a 260 page book published in 1991 covers the
history of portable tube radios and transistor radios from the 1920's to

the 1970's. Includes historical information on Sony, Zenith radio,
Admiral radio and many other brands who built portable radios. This is
an excellent reference book if you collect portable and transistor
radios. These are new books. This is a great radio reference book. I
have 2 of these books left.

Hi Bob,
a good theory and got me going - but then I realised it is an analog
superhet, ie no horrible nasty almost digital things. But a valid
point - will look at the o/p of the mixer on the affected bands - the
vfo runs a constant 5-5.5Mhz, so possibly the heterodyne osc. is
playing up - although, a rough check has shown the drive levels to the
PA board are constant irrespective of fault condition.

I'm looking for the black metal bezel, an unused paper dial scale, and a usable pointer for a National SCN or MCN dial assembly. I have the vernier mechanism and knob. If the bezel needs repainted, that's fine. If the paper scale has been written on, I can probably live with that also (I'll scan it and clean it up on the computer, then print a new one). If the pointer is yellowed, that's okay, as long as it's straight and not cracked.

I see NOS dial assemblies for sale on eBay all the time, but I won't pay THAT much for one! Sheesh...

I'm building an 80m/40m VFO and I need a freq. dial!

I've decided to sell my best VHF AM/SSB station. Consists of the Clegg Interceptor receiver and the Clegg Zeus transmitter with matching power supply/modulator. In near mint collector condition with copies of the original manuals. Perfect higher power AM and SSB station. Both units have the big, smooth turning Jackson Bros. dials. Due to the weight of the PS, I would prefer pick up in Greer, SC. Price $750.

Hi Pete,

I,m just adding my $0.02 here. From the other responses I take it that you are looking for something that's semi-portable. The rig I use is not very portable but works very well. I use a Heathkit HX-1681/HR-1680 combination that I put together over 20 years ago. The pair runs about 100 Watts on 80-10 Meters and is CW only. The audio filter is a little weak and you have to re-tune if you make big changes in frequency, but the part I like the best that the setup runs "Full Breakin". I just scan the band with the receiver, zero beat the signal on the transmitter, and start sending. Nothing else to touch but the audio level. No annoying clicking from the relays or the audio output.

If I was ever to look for another CW only setup, "Full Breakin" would be a must have.

>including a Yeasu 757.

In the case of the rig which shuts itself down when transmitting - are
you measuring the voltage inside the rig when the rig is off, or when
receiving, or also when trying to transmit into a dummy load?

If there's a bad fuse, switch, or connection somewhere, the voltage drop
from the fault might be relatively low when only a small amount of
current is being drawn - with the rig off, it might read full battery
voltage. When the rig tries to draw more current through the high-Z
fault, the voltage drop in the fault might reduce the voltage seen by
the rig's circuitry enough to result in a "low voltage" safety
shutdown (or failure to start up).

Try putting a 'scope on one of the 14-volt-rail test points on one of
the rig's PC boards, and see if [1] the voltage is getting through OK
with the rig off, and [2] if the voltage drops abruptly for a moment
when you try to power on.

> Of course the warranty just expired

I have one and sometimes it will not come on in the house. It seems that when I turn on the power supply then try to turn on the Icom , it will not come on. If I unplug the Icom and plug it back to the 12 volt supply it will come on and work fine. Not sure if the voltage comming up slow has something to do with that or not. It just started doing it after about 2 years. All the other rigs work fine from the same Astron 50 amp supply, including a Yeasu 757.

# 1127. Why can't MFJ fix my Analyzer?!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-20 15:06:08 UTC
From: Andy Cogswell <"SHORECOGS at COMCAST DOT NET">
Message-ID: <ta-dnZXzvOP-v6vdRVn-jw@comcast.com>
Source record: 23329

I bought an MFJ-269 from KC7SLO in September last year. When it arrived, I tested it and found that the UHF portion did not display the correct SWR. I tested it with 3 different UHF antennas. It works fine everywhere else. The problem was that although on the air tests with the antennas all showed them with low SWR in the proper frequency ranges, the analyzer told me on every one that they all had wavy SWR patterns. For example: 415mhz 1.7, 420mhz 2.5, 423mhz 1.2, 431 2.1, etc... It was obvious that the analyzer was displaying the wrong SWR on every antenna. I emailed Scott and he said he would help pay for the repair expenses since it didn't seem to have been damaged in shipment, but actually not working 100% when sold. He never came through with any help on the expenses even after several emails.

I was finally able to mail it to MFJ about a month after receiving it. MFJ claimed to have fixed it, I paid the repair costs and they mailed it back to me. It arrived and STILL didn't work right, even though several parts were listed as being replaced. I called them and they offered to have it shipped back and looked at again at no expense to me. I did this. They recieved it on 1/21/2004 and I received it back yesterday. It STILL doesn't work, dispite the fact that they claim 2 diodes were replaced. Now I'm waiting from my repair guy to come into work and I'm going to ask him what the next step is.

Anyone else have an experience like this!? I basically have an MFJ-259 because the UHF doesn't work, even though I paid for an MFJ-269!

What makes you think the antennas don't exhibit that SWR at those freqs?
(Not being obnoxious, just curious ...)

Andy,

what's the VSWR with a 50ohm and a 100ohm load. Are they 1:1 and 2:1?

I would consider that a pretty poor test of the analyzer. Find a known good
50 Ohm termination ( at 70cM) and use it to test the analyzer. Although you
did not state it, I assume you are testing these antennas through a length
of coaxial cable- unless you account for the cable's electrical length and
loss, the readings will not be accurate.

These are almost uniformly hoaxes designed to get your ebay information from you. A quick mouse-over of the supplied link can easily show this (except in one recent example where the perp managed to tell my computer that no matter what I moused over, it was the ebay sign-in page.. even in another window.. ).

Forward the entire e-mail, unedited, and un-answered to: spoof@ebay.com . You will get a confirmation from ebay within a short time of receipt of the forward, and a short time later you'll get one that says it is a spoof.

# 1137. Need source for Icom 720A Microphone

Newsgroup: rec.radio.amateur.equipment

Message-ID: <1PudncQfHeeGGavdRVn-ug@qx.net>
Source record: 23339

I recently purchased an Icom 720A on eBay, but the radio is missing the microphone. I understand that the early model of Icom transceivers had a preamp in the microphone itself, and you have to have either the original mic that came with the radio, or a similar microphone with a preamp to drive the audio in the transceiver. Does anyone know of a source or web page that has microphones for older Icom transceiver like the 720A? I'm not sure if Heil offers a mic for the 720A or not, but the issue of the older Icom mics is listed on their site. Can anyone help me out on this one? Just send me an e-mail if you have any suggestions. Thanks!

Because I did on the air tests with my watt meter and found that the SWR is only good in the rated portions for each antenna. Besides, if these antenas were as broadbanded as the analyzer is saying, the manufacturers would be selling these antennas for more than I paid for 'em.

I've tested the other antennas (HF and VHF) at the end of the coax with the analyzer and they show the same results as on the air tests with the wattmeter. When I switch to UHF, the results are completly different between my on the air tests and the analyzer. I'd say this is a good indication of a problem. I also tested one of the UHF antennas at the antenna, with a small jumper, about 8 feet in length.

Actually, one of them is a 50 foot length of 9913, one is a 75 foot length
of 9913 and one is a 50 foot of RG-8, all in good condition.

Well, I had a similar experience with their 2M SSB radio. Had their 6
meter version and have nothing but good things to say so I figured
their 2meter model would be as good. Wrong - never got more than 1.5
watts PEP, sent it back they said it was okay. Again tested it out on
air and even the folks just a mile or two away reported very weak
signal; put it on the meter and same issue about 1.5 watts PEP. BTW,
they returned it minus the manual that I foolishly packed with the
radio (sent everything it came with in case they decided to replace
it). Talked to them of the problem and they had me send it back.
After about 2 months and several calls they sent it back and claimed
the unit was just fine and the problem was with my antenna and/or
feedline and/or meter. Well, I did use two different meters - a Yaesu
that measures PEP and a borrowed Bird 43 - both read within a quarter
watt of each other. Checked the antenna out and it had a low(1.2:1)
SWR, changed the coax just to be sure and the readings were the same
(SWR of the antenna/feedline and the power output). Spoke to MFJ
again and they flat out refused to deal with the issue.

I won't claim that all their products are "Mighty Fine Junk" or that a
number of folks do get good service from them. Several folks I know
have their tuners and they work just fine and likewise with their '259
analyzer. However, I will no longer patronize their business due to
the length of time they took on addressing my concerns and the fact
that the problem was not even partially resolved. Had they returned
it with any improvement I might feel differently, or had they taken
the attitude of "Have you checked out your antenna/feedline/meter"
versus just claiming that was the problem I would have felt that at
least they were listening and working toward resolution. Oh well, it
doesn't transmit worth a darn - but in fairness the receive is pretty
hot.

Howard

As far as the actual customer service so far, they've been pretty good. At least they sent UPS here to pick up the analyzer at no cost and they're doing it again. This time the service manager will be looking at the unit personally. I also had another experience where my 3 element 6 yagi became bent during a bad storm. MFJ offered to replace any parts needed for free. Luckily I was able to straighten it out and it works fine now.

I just hope that this analyzer thing gets taken care of this time for good. The service manager claims as soon as it arrives, he will personally look at it.

Yes, it's completely bogus. In general, when you mouse over
the link, the bar at the bottom of your mail agent will display the
full URL. This fake email started with HTTP://w.x.y.z where w.x.y.z
was a raw IP address. Later in the URL was an @ sign with the eBay URL
which appeared as the link in the email. However, it's the part before
the @ sign (the bogus part) which is the URL to which you actually get

sent to enter your private information. Ignore the real-looking logos
and other good links on the page. They're real-looking because they
_are_ real -- copied from the real eBay site.

# 1152. FT 857 Audio

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-21 11:13:17 UTC
From: virginia <orten_smyth@hotmail.com>
Message-ID: <50HZb.9024$Y%6.903627@wards.force9.net>
Source record: 23254

I have a FT 857 with superb audio on FM but with very toppy audio on SSB. Furthermore, I'm unable to get it to modulate the output (on SSB) beyond approx 70 watts - and that's with an uncomfortable level of voice volume. I have two other transceivers that have no problem fully driving the output to 100w at a comfortable level of voice. Measurements have been done with a calibrated power meter and dummy load.

My SSB mic gain control is set at 60 - to go beyond that introduces a muffling effect. My speech processor is set at 40 and an increase on that causes further deterioration in the audio quality. I have the LPF enabled to emphasise the lower frequencies. The DSP optional unit is fitted.

Is there anyone out there who has had similar problems and found a cure? Would appreciate the advice!

Virginia.

# 1156. DTMF programming Kenwood TM-741 on cross-band repeat?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-21 15:47:46 UTC
From: tirebouchon69 <tirebouchon69@yahoo.ca>
Message-ID: <l5LZb.17007$d34.1830895@news20.bellglobal.com>
Source record: 23258

Hi fellow hams,
Is it possible to control the Kenwood TM-741 remotely via DTMF when operating in cross-band repeat mode ?

The DTU-2 DTMF decoder unit is installed in my TM-741 rig. When it operates in cross-band repeat mode, I access it with my VHF handheld, and I would like to change the UHF frequency remotely via touch-tone (DTMF). This way I could be able to access to any UHF frequency remotely (from VHF), without touching or accessing the TM-741 radio.

Is there a procedure for this ? Could it be DTMF-controlled from the "other side" (from UHF in my example) as well, I mean changing remotely via DTMF any band via the other one?

Thank you in advance. 73-88rs

Source record: 23262

I have a Diamond X-6000A triband antenna, and its SWR curves are 'wavy' on VHF and a little on UHF, not the smooth symmetrical log curve one might expect. It's likely the interaction of the other band resonances, but nothing to lead me to believe it's broken.

I like the suggestion about trying a good quality dummy load on it (or perhaps another analyser on the same group of antennas) before you condemn the thing as junk.

Good luck!

B

I don;t know about that place, but here is a place for cell phones and
accessories that is much cheaper than the US prices, Several at work have
ordered from them directly from Hong Kong.

http://www.cellphoneshop.net/celphonbat.html

Probably nowhere near the markup as in the US stores.

Much of the imports in the US are through one or two major distribuiters
that get big quanities direct. Then they are sold to a smaller dealer in
maybe 20 to 100 lot quantieties and then maybe even to a smaller dealer in
lots of 5 or less. Each one has to make some profit. If you bypass them
the savings can be very big.
Now if it breaks you may be on your own, but you have saved enough to buy
new one .

# 1163. Opinions of QRZ.com? Eham.com? ARRL.org?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-21 20:41:32 UTC
From: Mike Rophone <Kilo@Watt.org>
Message-ID: <2004221-214132-987938@foorum.com>
Source record: 23270

QRZ.com was one of the first. QTH.com is one of the neebies. They
are opening up a bees nest of BS with their forums. Eham will publish
everything from racial slurs to hams demanding ham businesses be JAILED
if their parts are a week or two late. If you have something positive to offer,
you're generally censored. (I guess the theory is that flames bring "visitors"
to the site.)

I gave up on QRZ.com YEARS ago when they started the forum crap. The mud
slinging got so bad, it became worse than Usenet! (Hard to believe, huh?!)

The latest entry is QTH.com. Scott seems to be keeping it under control. But
how long before someone posts the wrong thing and QTH.com gets involved in a
libel case???

I know some of you are going to choke, but I think one of the best, most well
maintained, most positive, and most responses from classifieds is ARRL.org. Now
if they'd just get a DX Cluster server at the site, I'd be their all day!

## 1165. Jumper pack as temporary power supply for dual-bander?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-21 21:19:56 UTC
From: "Joe Bramblett, KD5NRH" <kd5nrh@yahoo.com>
Message-ID: <R8o3QDG4DKzq7vMTmfsGvgK8GVA8@4ax.com>
Source record: 23266

I have one of those portable power packs that can jump start a car or run 12V accessories, and an extra dual-bander that draws about 8A on max power transmit that I would like to use in the house from time to time. Has anyone tried using one of these packs as a power supply? It has a built-in charging circuit, and according to at least one tech support guy, shouldn't have any problem with running a 10A or so load while plugged in to AC, but I'm wondering if there are possibly other concerns with this arrangement.

One concern would be that many cigarette light plugs and sockets are
not rated for more than 5 or 10 A. A typical 50 W mobile rig can pull
as much as 15 A.

You might consider adding an alternate socket for power for this, and
the Anderson PowerPole is becoming a standard amongst many ham groups.

Those power packs typically have a 17 A-Hr battery in them, so with a
duty cycle of 5/5/90, you would get a couple of days.

Happy trails,

> when you try to power on.

I agree. I notice the 706g is very prone to shutting off if the
voltage drops. I think it's a protection scheme of sorts...Note that
it will always shut off for a second when starting the engine, even if
the wiring is straight to the battery. "Or at least mine always has".
Also, if you run a battery down low, it has the quirk of shutting off
and on, off and on, forever until you notice it and turn it off. I've
had this happen when I forgot to plug the charger in, and the battery
got low. Click, click...click, click....click, click....No telling how
long it did that before I noticed it...Didn't seem to hurt it

though...
Gotta a funky power connection, corrosion, loose, or cold solder joint in the rig I bet somewhere. Need to find the point in the power trail that you see the large voltage drop on transmit. I'd start from the supply, and work back to the rig until you find it. BTW, if using a supply in the house, I'd always prefer to power the supply up first, and then turn the radio on. Here, I use battery power and a charger even in the house. Mine is on nearly 24/7...Hardly ever turn it off, unless it to put it in the truck. Mine is three years old. MK

re: programming service

I am looking for someone equipped to program one each GE M-PA System VHF and UHF portables. Purchased with their commercial frequencies, they need to be reprogrammed for 2 meter and 70 cm amateur bands, respectively; i.e.:

-- currently -- ----- need -----
VHF 146-162 Mhz 144-148 Mhz xmit w/ wide recieve
UHF 440-470 Mhz 420-450 Mhz xmit

I'll have specific repeater and ARES-RACES frequencies to put in as well

let me know if anyone can do it and at what cost, or perhaps recommend someone

I am in NYC

thanks!

- iz

The one in question has never been measured at over 8A, though the DMM
I was using was hardly top-of-the-line, but it was on a 10A circuit
for most of its mobile life without any blown fuses. It's an old
Yaesu FT2700RH, FWIW.

>You might consider adding an alternate socket for power for this, and
>the Anderson PowerPole is becoming a standard amongst many ham groups.

I've considered just making a block with terminal posts, a few
PowerPoles and maybe a built-in RV fluoroescent light. That way it
can run from the jumping clamps with no worries about the connector
capacities. I had, at one point, started to turn a junked footlocker
and a cheap-but-sturdy luggage dolly into a portable station, and this
might be a good way to revivie that idea.

>... ?

Be careful hanging stuff from the flimsy liner in most vehicles. If you can find a roof brace to bolt to, you ought to be able to get it pretty secure, but convenience might be limited. Best would be to use something with a remote mountable faceplate, put the rig wherever you have room for it, and mount the faceplate somewhere easier to see without major gyrations.

>Any ideas? Dont' truckers have there rigs like this?

Most trucks have an overhead area between the windshield sections that's just right for radios. It's also a lot easier to access while driving due to some serious differences in relative driver position and size of the available passenger compartment. I installed CBs for these trucks for a while, and aside from bolting it to the top of the dash, putting it in that compartment or hanging from the bottom panel are pretty much the only ways to make it stay put through road vibration.

>Know what it
>would take or any other ideas I could do?

A lot depends on the rig you want to install, or are you still shopping for something to fit?

# 1178. Please help this newbie with two small GMRS/FRS radios

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-22 11:01:17 UTC
From: gogonegro <nospam@invalid.com>
Message-ID: <c1a25b$5g$2@grillo.cs.interbusiness.it>
Source record: 23280

My old dad just gave me a pair of Columbia GM22 handheld radios (being totally ignorant I would have called them "walki talkies" 8->).

I am totally unable to get them working.

Searched on the Internet for any manual but could not find any.

Would any kind soul which knows these critters give me a clue ?

After fiddling about with them now when I turn them on I see a larger number 1 alternating with a larger number 2 with a fixed smaller number 33 in the upper right corner.

Reading from the specs I seem to understand that 33 is a "security subchannel (?)".

I also read about these things having an "auto scan" capability but could not understand how to make it work.

Thank you for any help.

Bob Alexander

Agreed, on all points.

I had to face a similar problem when mounting a dualbander in a Ford Aerostar... no terribly good place. A remote-mount faceplate system (Kenwood TM-G707A) turned out to be an excellent solution. The faceplate itself is so light that its bracket can be screwed to the plastic roof-liner with no problems - it hasn't vibrated loose or torn out in two years.

The radio itself is mounted to the side-wall, behind the driver's seat. I screwed the mounting bracket to four 1" metal standoffs, held the bracket and standoffs against the side-wall, market the positions where the standoffs touched, and used a Dremel grinder to remove the paint at (and around) these spots. A healthy dab of metal-loaded epoxy on each of these spots, another dab on the end of each standoff (the metal being roughened with sandpaper first), some duct tape to hold the bracket in place while the epoxy cured, and I had a _very_ robust mount for the rig. A hole drilled in the frame nearby provided an excellent spot for attaching a short grounding wire (braid, really) from the bracket.

The microphone cord by itself isn't long enough to reach the rig, but a 6' Ethernet cable and an RJ-45 coupler fixed that easily enough.

I haven't heard of problems with lithium batteries leaking. That's a problem most usually ascribed to alkaline batteries, whose outer jackets can corrode as a result of the electrochemical reactions within the battery. However, your rig's battery may well be reaching the end of its use-life in this application - 10 years is the usual quoted range for low-power memory backup applications - and you may wish to consider replacing it for that reason.

Replacing the battery may be either easy, or tricky, depending on the rig... I don't know about the TS-940. In some radios the battery is in a clip holder, and replacing it is trivially easy. In most radios, the battery is soldered into place, and it's necessary to unsolder it and solder in a new one - the usual static-discharge and don't-burn-up-the-board precautions should be taken. You'll probably find that your local Radio Shack will _not_ have a replacement battery with the same sort of solder tabs - you could either order the right battery from (e.g.) Digi-Key, or remove the old battery and solder in a battery holder (if you can find one which will fit), or improvise (attach lead wires to a lithium coin battery using a dab of silver-loaded conductive epoxy).

In some radios, the battery provides backup power not only for the programming, but also for the radio firmware. Replacing the battery in these radios is tricky - in order to avoid losing the firmware you must jumper in an alternative DC power source when replacing the battery, or you must have the specialized kit needed to reprogram the firmware after replacing the battery. This is usually a job for a factory or factory-authorized service depot.

# 1193. FS Nice Yaesu FT-707 HF Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-22 19:12:57 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <4b7_b.13003$lQ2.1430@okepread02>
Source record: 23295

I have for sale a Yaesu FT-707 HF Transceiver. This is a neat little rig. It was Yaesu's competition to Kenwood's TS130S. It
covers 80 thru 10 meters including all of the WARC Bands. The 10 meter Band has 4 positions for optional crystals.
This one has the crystal for 28.0 to 28.5 Mhz. It also has crystals in the other 3 positions for the 11 meter Band.
The rig runs 100 watts. The transceiver does SSB, CW, and AM. It has a bright amber digital readout. The front panel and cabinet are in nice shape. It comes with the original handmic and the power cord. Also include in an Original Service Manual. Price is $275 shipped in lower 48. Digital pictures available. Thanks, Charlie Hugg, K5MBX

As a former member of LIMARC (I did not renew only because I moved away from the area), I wrote to the current president, Daniel Reisman NY2L (whom I know personally), and informed him of the responses to N2ION's messages soliciting donations of equipment to LIMARC.

Daniel assured me that N2ION is acting on behalf of the LIMARC Board of Directors in soliciting these donations. An official statement probably will be issued by the Board after its next meeting.

LIMARC is on the Web at http://www.limarc.org

Source record: 23200

<< I have been told that the lithium
batteries
used in these circuits could leak and damage if not replaced after so many
years. Is this a real threat? >>

Ben-

While I can't say it would never happen, I have never experienced leakage from such a lithium battery. Common practice seems to be to leave it until it dies, unless you happen to be servicing an old radio for some other reason.

I recently had an experience troubleshooting a problem with a twenty-year-old Icom radio. Assuming the battery was the problem, I replaced it.

I found that the original battery still had a charge, and the replacement did not fix my problem! In fact, I used that old battery to temporarily replace a dead one in a ten-year-old Kenwood TS-50, while waiting for a new battery to arrive.

Depending on the battery, nominal voltage may be around 3.2 to 3.6 volts. If you measure the old one with a high impedance meter, and it reads 3 volts or greater, then you still have some life left in it. If it measures below 3 volts, it may still function, but time is running out.

Source record: 23202

<< I recently purchased an Icom 720A on eBay, but the radio is missing the microphone. I understand that the early model of Icom transceivers had a preamp in the microphone itself, and you have to have either the original mic that came with the radio, or a similar microphone with a preamp to drive the audio in the transceiver. >>

Mike-

I was under the impression that the older Icom transceivers used low impedance dynamic microphone elements, maybe 200 Ohms. However, I'm not familiar with the 720A.

If you don't already have documentation for the radio, go to http://www.mods.dkand click on ICOM. Then click on Manuals & Other on the left side of the page. There are both service and instruction manuals listed for download. I did not download them so can't say how good they are.

There should be a diagram included in the service manual, that will show how the microphone is wired. I would expect that if a pre-amp was required, you could take any microphone and replace the cartridge with one of the Radio Shack electret cartridges that come with the built-in transistor. I found one in an old cordless phone that would probably work as well.

Heil should know what you need, and have a model that will plug right in.

You should look for Icom model HM-7 HM-10 or SM-5. Occasionally
available on ebay and the news groups. Seen prices range from $10-15 up
to about $50. You can check Icoms web site. They have a mic and radio
compatibility chart.

Hello OM-s

I have recently bought an Yaesu YR-901 CW-RTTY decoder with the user manual.
I connect it from the composite video output to a monitor.
But always when I turn it on the screen is full of a mix of occidental and japanese characters. The reset/clear buttons do nothing. Always the same. When incoming signal the screen does not change but the vumeter seems to work.

Is the memory of my device broken ?

Please help.

The issue was never "did he ever have WMD". He did. This was not
in dispute. Nor was the issue, would that scum have used them,
certainly he would have.

The issue was "does he, as of late 2002, early 2003, have WMD." We
thought he did. He said he didn't. It turned out that he didn't.
We were wrong.

The fact that Cheney, Rummy, Condi are in denial is sad. They are
bright people and want to do their best. Unfortunately, they made a
mistake, can't admit it, and have been spinning reality. The term
for this is imagineering. It is a mental illness of the powerful
and pompous. "I am the big dog, therefore I do not make mistakes."

The last bit that they spewed out was something about, "well, he
could have made WMD." That's beyond sad. If you had wings, you
could fly.

It's sad. It's sad that 540 moms, dads, wives, children, have lost
the world.

The fact that Sadam is a worthless piece of protoplasm does not make
it OK. It's an ethical mess.

You should be able to build a bracket that goes between the plastic knee
panel on the drivers side of the cherokee and the AM-FM
radio/airconditioning panel above the center console.

Basically I removed the plastic panel (and the steel sub panel) and
measured the distance fron the mounting screw hole to the edve of the
panel. I then bent a piece of aluminum to fit that distance. The
L-shaped piece should be long enough to clear the oabeks abd have room
for another l bracket that will support the removable faceplate of the
857. The main body of the radio can go under the back seat. Cables can
be snaked under the console and carpet.

The real problem is where to put the antenna so that it doesnt hit the
garage door when yo pull in.

Regards de ND2E

## 1220. Difference between 6DQ6A and 6DQ6B?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-23 14:11:45 UTC
From: k5dh@raytheon.com
Message-ID: <BSn_b.1$_n2.0@dfw-service2.ext.ray.com>

What's the difference between a 6DQ6A and a 6DQ6B?
My tube manual is an older book that lists only the
"A" version. Can I use a "B" version in a DX-20
without changing any of the rig's component values?

73,
Dean K5DH

If it is at all similar to other Yaesu HTs, you can program or erase a
memory from the keypad, but using the cloning software is
approximately 1,000,000 times easier.

YES You should be able to use it with no problems -

My RCA RC-21 Manual lists both. B series is a bit better tube but you probably won't notice any difference (power output wise) until you get to 15 or 10 meters. Even then it's probably marginal.

It has slightly higher operating values compared to the "A" so I guess you can call the "B" version a ruggedized 6DQ6A.

Would pay some attention to Neutralization as "B" model would have a greater tendency to oscillate due to higher transconductance.

Happy to scan the tube manual for you if you need it.

Personally, I've always used a 12V battery... currently a 100AH gell cell. No noise there at all! Just built a little home brew 4A 13.6V regulated power supply to float the battery with and it NEVER fails, power outages or whatever. Been so reliable I have held off for years installing a solar panel in place of the little P/S.

Keep in mind, there's a 'bug' in Microsoft Internet Exploder that
allows someone to 'fake' the link so even when you put your mouse over
the link, the link could still say www.ebay.com - at least it would
APPEAR to say that.

Evan

While it is possible that your analyzer isn't working, it is also possible
that you do have some wild variances in impedance with your current setup. I
took a look at the return loss of one of my antenna systems with a tracking
generator/spectrum analyzer combination, and did see some multiple resonance
nodes. This measurement was done, using a Narda directional coupler, which
is flat out to 12GHz, as measured on an HP 8753E Network Analyzer.
Some sort of transfer standard such as an accurate 50 Ohm load would verify
if your analyzer is bad.

CARS/N7PIR Will offer an operational check of Ham, and other Radio
Transmitters at the Puyallup WA Ham Fest on Saturday March 6th.

It's a perfect opportunity to check out that bargain radio before you
purchase at the Ham Fest, some other location, or your current radio.

Transmitter and Receiver will be tested as listed below.

PL Tone Deviation
DTMF Deviation
Transmitter Audio Frequency Response
Transmitter Output Frequency Deviation
Transmitter Power Output Level(s)
Receiver Input Sensitivity
Receiver Frequencies will be checked
A Printout of measured values will be provided.

Look for our tables on the first floor.

Thank you.

Message-ID: <qul_b.7877$aT1.2756@newsread1.news.pas.earthlink.net>
Source record: 23237

Well you gave the problem in the 1st couple of lines
1) USE Double shielded coax between duplexer and repeater...throw out
the RG 8 foam stuff...NEVER use RG 8 in a rptr install...
2) Hamtronics....enough said
3) Ringo Ranger antenna...if it's loose in any place, it will cause
problems....need to get a real repeater antenna....One without a ring
that depends on a cheap ring connection for matching.

Depending on the cleaness of the RF output, and how good is the rcvr in
overload conditions is what determines the isolation you need in the
duplexer....95db isolation is easy to find...WACOM WP641s, 642, and
other makes!! Get your isolation better than 80db and get rid of the
crap coax...and you'll be a lot better off!

Considering that all 3 antennas showed appropriate SWR readings on their
respective frequencies on my wattmeter with on-the-air tests, and the
analyzer showed wild SWR readings on the same frequencies, I'd say the
analyzer is at fault. Works perfectly at HF/VHF, so I basically have an
MFJ-259 in an MFJ-269 shell until they fix it.

UPS picked it up yesterday. Hopefully I will hear something within the next
2 weeks.

I must have been asleep when I made this post.....It was an
8717 or 8718.....the 8753 only goes out to 3GHz!

Pete

I am sure that it is quite possible that your unit has a problem, but still,
a directional wattmeter is not the absolute means of measurement accuracy.
When working in an RF lab, even the Bird 43 series elements need to be
calibrated against a power meter, such as an HP 437. I wouuld still try an
accurate 50 Ohm load for characterization.
Good luck.

The only way I am aware of to reset the "P" (Main band) or "p" (Sub band)
indicator is with the VX Commander software. It is not necessary to reset
the indicators however since they have no meaning unless "dual watch" is
enabled. If dual watch is enabled there will be a dw in the lower left
corner of the display. Dual watch is disabled by pressing the V/M key.

## 1243. Yaesu ft2500m bulb failure..

Hello, I have a Yaesu ft2500m radio. The bulbs for the display have burned out. I have read that other people with the same radio have had the same problem and was wondering if anyone has replaced the bulbs with anything different then the factory bulbs? if so what did they replace them with. any part numbers would be great.. also if anyone can give me a part number of a bulb through radio shack or an electronics store like that would be great. I would like to replace them. Thank you very much.

Dustin

Icom PCR 100 Computer Receiver ?? ever used one ??
Anyone know if these are any good???
also do any one know how much they cost and where i may buy a new one in the UK ??

The IC-PCR100 is an intelligent PC-based radio scanner that lets you tap into the entire world of radio communications. Controlled from a small, sleek black box and easily installed, the IC-PCR100 allows you to monitor a wide range of communications and all from your PC!

0.010 - 1300.000 MHz

WFM, FM, AM modes

1000 channels per file

Tuning Steps: 1, 5, 6.25, 9, 10, 12.5, 15, 20, 25, 30, 50, 100, 500 kHz and 1 MHz

I have had one for years..along with the PCR-1000... The PCR-100 was located on a hilltop, remote controlled with it's audio sent back to the studio.. It works pretty well, not the best radio..but certainly worth the money. The PCR-1000 is a VERY nice RCVR..with SSB capabilities....both are "keepers"....Eddie

I agree with Chris, RG8 is mainly good stuff, but it is intended for more two way radio and not full duplex systems. I also recommend the best coax to the antenna from duplexer as well, may not affect it much, but even if it helps the slightest, it helps.

The Hantronics is a good starter repeater to learn with, but you will notice as you get better equipment, the quality of the system will greatly improve. Look into a Yeaseu or Kenwood repeater or commercial repeater. Cheap is good, but like they say, you get what you pay for. Look inside the case and make sure that the transmitter and receiver are completely shielded from each other as well. You are getting a RF leak into the receiver is what is causing the choppy affect if it isnt shielded.

The duplexer should be at least 80% or better. 80% being bare minimum. Wacom as recommended below will be the right choices. Some duplexers are used in different types of systems. The frequency spread determines the amount of isolation needed in a duplexer. 77% may be just good enough on a 440 system because of the 5 Mhz spread between TX and RX frequency. Since 2 meters is 600khz difference, a tighter duplexer is needed. In most cases, a clean 100 watt repeater will work great with a 90% duplexer. any more than 100 watts would require a tighter isolation in my experiences with commercial gear.

Definately a repeater antenna. Depending on the coverage area, A ringo ranger may be fine, but a repeater antenna is what it is intended for, a repeater!

Also make sure the repeater case has no exposed openings. Some people dont realize that when they are tuning the repeater with the lid off for some reason, that the RF leaks out easily. The better the shielding on all of your equipment, the better the quality.
Also make sure everything is grounded properly. One case not being grounded could be severe enough to kill a 4-5 S-Unit signal.

Reducing the sensitivity of the reciever would be pointless. That would be gaining nothing. If anything, reduce the output power if necessary. I usually only run my repeater at 75% of what it says for continuous duty. So if my repeater was 100 watts Continuous Duty, I would turn it down to 75 watts thus increasing its life, stays cooler and my receiver isnt affected at all by it, in fact I notice that the receiver actually doesnt receive as much garbage from the other systems on the hill while in use and I did notice that distant users were able to get in the squelch easier this way.

I used a 1000 for awhile. I loved the performance of the unit. Using the 3rd party software was fantastic, much more so that the supplied ICOM application.

But as far as the 100, never used it. Just keep in mind using a PC to control a unit like that was kinda novel, but make sure the PC doe not ooze RF from it.

To go cheap and really good quality get a comercial transceiver or two. The GE Mastr ll is one of the best ways to go. Well shielded and sharp tuning receiver. They can be had for less than $ 100 and about half that much more for a set of crystals. Then add a controler such as a Cat 300 and you have less than $ 500 in the basic unit. Then you add the expensive stuff such as a duplexer, feedline, and antenna.

Along with the GE Master II check out the Motorola Micor Repeater,
(not the mobiles converted to repeaters, alhough they work too)
They are cheap also and as with the GE, and you can't kill them!!
These are commercial repeaters and built to last almost forever.
Both are excellent!

I've been in HAM hibernation for the past 20 yrs or so.
Last time I was on the low bands
was with a HT-40 + HQ-110 or TR4 -

If I wanted to look for a small used inexpensive low band rig
that could be used at home, in the car,
or with AC/12V power on Boy Scout campouts
any suggestions......
My challenge would be not having a great antenna...
just something tossed up at a Boy Scout outing
so my concern is antenna matching a hunk of wire :)
Phil - WA9TKA - Chicago

# 1258. Yaesu VX-5R and Lead-Acid Batteries

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-25 20:52:59 UTC
From: Joshua G Senecal <senecal@ucdavis.edu>
Message-ID: <Pine.LNX.4.44.0402251232570.3146-100000@pc12.cs.ucdavis.edu>
Source record: 23159

Hi All,

A good friend recently gave me some 12V 2.2A lead-acid batteries. It occurred to me that I can use them to power my VX-5R HT while at home, using the accessory port power adapter. I went to RS and bought an accessory port, soldered up some power connectors, and connected the HT to one of the batteries.

It works fine when receiving, and the HT charges its internal battery when off. But if I try to transmit at 5W (and sometimes at 2.5W) the VX-5R's "safety reset" triggers. According to the manual this happens when power is interrupted. This doesn't happen at the two lowest power settings.

What is happening here? I don't know how this safety reset works "under the hood", and I don't know a lot about lead-acid batteries. Is my power really being interrupted and if so how can I remedy this? Or is the HT just seeing a large voltage drop on transmit and assuming that power is being interrupted, thus triggering the reset (I assume this can be remedied by putting two of the batteries in parallel to get more current capacity).

Some background information, when plugged in and monitoring, the HT's voltage readout shows 11 volts, coming from an external power source. On transmit at 5W the voltage drops to less than 9.5 volts, and the VX-5R says that the power source is from the internal Li-Ion battery, and then resets. I'm guessing that the voltage drop is caused by the battery's inability to supply the needed current, and that the HT assumes that certain voltage levels correspond to certain power sources.

The VX-5R draws about 1.9A at 5W output, but note that the lead-acid batteries I have are old, and so are probably not able to output the full 2.2A.

Any help is appreciated.

Thanks!

-Josh, AE6IQ

The batteries aren't able to provide the full (1.9-or-so) amperage, at
the voltage required by the VX-5. The voltage drops when you key up,
and the VX-5's safety disconnect shuts down the radio.

A fully-charged gel cell in good condition ought to be delivering no
less than 12 volts. If you're only getting 11 volts when drawing only
the receive-monitor current, then the battery is either badly run
down, or old and dying. If they don't charge up well and hold 12
volts, then you may not be able to use them for transmitting... just
for receiving, or as a way of providing portable power for recharging
the VX-5's built-in battery pack. [The latter is how I use some old
gel cells I have - I charge 'em on my solar panels, then use them to
charge up the VX-5.]

So wiring two of the batteries in parallel (for extra current) would be a
good fix until I have the funds for some better batteries?

Folks,

I just buy a used AL-80A. It is set on 120 V and without connecting any rig i did connec to gnd and 120. When I turned on I am seeing then HV is 2400V. AL80A manual is saying that no load must show 3100V. Is this mean that I need a new 3-500Z or can be something else.

Thanks for the help.

Check the HV meter resistors. They've been known to change value.

The rigs you could go with are too numerous to mention. But most
transistorized rigs do require a resonant antenna. For your "hunk of
wire" look at the MFJ antenna tuners, or for automatic antenna tuning,
the tuners from LDG or SGC. (there's web sites for all these guys)

That might help matters.

However, the low voltage that you are reading under light load
suggests to me that the battery you are using is either seriously
undercharged, or is dying (a shorted cell, or dried-out electrolyte).

First thing I'd do is check your battery-charging circuit. If you're
trying to charge them from a 12-volt regulated source, then this could
be the root of your problem... a "12-volt" gel cell won't accept a
useful amount of charge at this voltage. You'll need around 13.8
volts to slow/float-charge the battery, and perhaps 14.3 - 14.4 volts
(with an appropriate current limit) to fast-charge it.

Make sure to measure the actual line voltage. While low line voltage would not cause the HV to read that low, it's always a good idea to know what it is so you can set the taps correctly.

They sell a small "grain of wheat" type bulb that could be made to
work. Look for the one that draws 25 ma. One problem is the original
bulbs don't use wire leads per say. The short leads from the original
bulbs are soldered directly to the board. So you might have to
slightly modify the mounting. There are 4 bulbs total. Overall, it
might be better to order the yaesu bulbs, if you want it to look
original. The original bulbs have an orange shell. To extend bulb
life, don't turn the display brightness all the way up on the new
bulbs. MK

For Sale:

Ten-Tec Omni V Model 546 Series C Transceiver and Ten-Tec Model 255
Power Supply.....$800 plus shipping

This is an older, all solid state 160-10 plus WARC bands transceiver
made in the USA with digital readout and loads of other features.
Excellent working condition with 110 -120 watts on each band as measured
by my Bird wattmeter. Has CW filters. Has crystal for 30 meters but
does not have crystals for 12 and 17 meters. The insides are clean and
unmodified. The power supply also contains the speaker and is also
metered. Excellent cosmetic condition except for a small patch of vinyl
missing on the top of the transceiver and the metal speaker grill is
slightly bent on the left side. This can be straightened by disassembly.
These can be seen in the photos. This is a radio that you can still work
on yourself! Includes a photocopy of the manual.

A you don't have to have the power on to check the meter resistors.
Find them on the wiring diagram and lift one lead from the board then
using an ohm meter check and compare values with the schematic. If
memory is right it is a one percent resistor and one megohm. Might be
two though. You should be seeing around 3100 --3200 volts no load on
the HV meter, it will drop to perhaps 2800--2700 under load.

Be sure you have the power plug unplugged from the mains and wait at
least 30 minutes for the caps to discharge (NEVER TRUST BLEEDER
RESISTORS!!) then using a chicken stick to ground touch the capacitors
positive terminal to be sure there is no HV floating.

You're a ham and familar with all this stuff right?

If you're not sure about it, don't.

No joking matter 3 Kv is a killer!!! So No power on while you work on
it, Ok?

Dale, K9VUJ

You might want to take a look at the Kenwood TS50 for HF only use. Seems like a rugged little radio, and I think it has been around for a while. Check out the user reports at . http://www.eham.net/reviews/detail/411 Also, when you get it narrowed down, try to download user manuals from the manufacturer's sites.

After 8-10 years of 24/7 use even at the "dim" setting, I've had
meter bulb burnout in my Kenwood R-5000 and ICOM IC-7000 receivers
and LCD backlight bulb burnout in the ICOM and Alinco mobile
transceivers used at the base station. At least the two "base"
receivers use seven-segment fluorescent numeric readouts for
frequency indication and LEDs for other things.

Replacing them is a JOB, especially since I am partially blind and
the local repair place will keep the equipment for a month or two
before they even get around to looking at it. They replaced the
bulbs in the Alinco transceiver and the Kenwood receiver with
"who-knows-what" bulbs that lasted less than 2 years.

A small penlight shined on the LCD display from the outside shows
the readout anyhow.

Read the label on the gel-cell. 14.4 volts will cook the battery in
no time flat. I learned that the hard way several years ago.

My power panel uses two regulated power supplies (a 50 A unit and a
35 A unit) operating through an isolation diode block to float
charge the Size 31 (100+ AH) marine deep-cycle gel-cell. The 50A
supply is set to deliver 13.5 V to the battery bus by itself, and
the 35A supply is set to deliver 13.3 V by itself - so I can tell by
the digital voltmeter readout as well as the LED on-line indicators
if the big supply goes off-line and the small supply has picked up
the load. The steady-state load on the bus is 7A which goes up to
25A when all transmitters are firing.

In designing the panel it helped that both my wife and I are both
electrical engineers trained in power distribution and that she
spent a few years in large-scale UPS design. She did insist,
however, that the installation be done to UL and USCG 12-V marine
safety standards, not "hamshack haywire". Expensive but "right".

The installation will run for about four hours in UPS mode after
which various boxes drop off line when the voltage goes much below
11.8 V. My next investment is a small natural-gas-powered gen-set
to supply the 120 VAC for the chargers and the computer installation
when commercial power fails. I'd love to put the whole house on
standby power, but who has a 50 KW gen-set or better yet fuel cell
hanging around that needs a good home? <ggg>

> no time flat. I learned that the hard way several years ago.

Good point. 14.4 is appropriate for most flooded-cell lead-acid
batteries, but is hard on gel cells, and is definitely too much for
AGM/glassmat/spiral-cell batteries.

13.8 seems to be generally safe, and some folks feel that
float-charging should be done at 13.6 or below for certain types of
batteries.

> My power panel uses two regulated power supplies (a 50 A unit and a

That's definitely in the "Don't drop the screwdriver, George!" category!

From: Michael Melland <w9wis@charter.net>
Message-ID: <103qbbk4th11q86@corp.supernews.com>
Source record: 23168

I'm not too familiar with that amp but... the specs on the Ameritron site calls for 2700 volts with the AL80B under load and 3100 volts no load. 2400 is too low..... the HV shouldn't, I believe, change with a soft tube as it's a measure of the transformer voltage. In my experience the main cause of low plate voltage is low line voltage at the outlet.

The meter may be off some .... and 120 volts isn't exactly well regulated voltage. Double check the tap set-up on the power transformer.... make sure that is set for your line voltage. Measure your line voltage and set the taps to the closest voltage...The info on the AL80B indicates it's a multi voltage type transformer with 14 taps from 90 to 230 volts...but I'm not sure about the AL80A.

DO NOT fool around inside an amplifier if you are not knowledgable about working around high voltage and discharging capacitors. The HV in an amplifier is LETHAL. (usual disclaimer <grin>)

Folks,

Thanks for all this valuable info. I did check a few things more. Power outlet is showing 124 Volts on my Fluke. When I turned the amplifier I am not seeing any voltage changes on my outlet. I did take a visual look to the 3-500Z. I am not familiar about this tube but when I do up side down very gently I do hear a metallic click noise. It looks like some thing inside the tube is loose. I did not load any RF to the amp yet. I don't want to guesswork anything Ameritron manual says 3100V I have to see it at least 3000V. 600V difference is big. Is any one see low voltage on the soft or bad 3-500Z ???

Thanks to all for the help and 73s

# 1284. Crystal Frequencies, HR-2A

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-26 04:25:06 UTC
From: KU2S <ku2s@arrl.net>
Message-ID: <gqtq30htk8q9qpoc4onmqtikm65unacs9e@4ax.com>
Source record: 23186

Hi folks.. Have a Regency HR-2A that I want to re-crystal for packet use, but don't have the manual, and therefore do not have the formula for calculating the frequency of the receive and transmit crystals for desired frequency of operation. Could anyone out there help with this info? Hamfest coming up this weekend and I'd like to shop for crystals. Also, is there a .PDF of the manual available anywhere? I've searched the web and there are plenty of folks who'll sell me a photocopy of the manual for anywhere from $15.00 to $25.00, but to be honest, that would exceed the value of the radio... Any help would be greatly appreciated...

Thanks much, and 73!

But you asked this question back in November here, and got some answers.
If that wasn't enough, people have asked about the crystal frequencies
before, I know I found them at the time you asked back in November.
Go to http://www.groups.google.com and do some searching by yourself.

I know nothing about that rig, but in general you can check if any of the existing crystals are stamped with their actual operating frequency, and figure it out.

I assume it's a two meter rig. Normally the transmit crystals will be some integer fraction of the transmit frequency, like 6 or 8 or 9, so a 144.0MHz transmit frequency would have a crystal frequency of 24MHz (6x), 18MHz (8x) or 16MHz (9x). Receive will be receive frequency +/- the IF frequency (almost certainly 10.7MHz), divided by some fraction, so 144MHz would be something like 19.338MHz ( (144 + 10.7)/8 ) or 16.663MHz ( (144 - 10.7)/8 ).

This sounds daunting, but if you can noodle around with a calculator without loosing track (or use a spreadsheet!), you can figure it out.

I thought the regency's were... operating frequency minus 10.7Mhz divided
by ***3*** not 9! that would put the crystal around 45.0Mhz. The crystal IS
a 3rd overtone..but should be in the 45 Mhz area....Eddie.

If there is something wrong with the 3-500 to cause low plate voltage, the plate will be glowing red with out any RF drive to it. This will indicate high current and the tube is bad or the bias circuit is bad. If the tube is soft or bad in any other way the plate voltage will be on the high side as it is not drawing much current to load down the plate power supply. Too low of a plate voltage indicates something is wrong in the power supply (provided it is getting the correct primary supply ) or as was mentioned if you are using the built in meter,something is wrong with it or the resistors that determin the voltage range.

> would like to replace them. Thank you very much.
>
> Dustin
>
Dustin,

I had several of the panel bulbs burn out on my FT-4700RH - the FT2500M
may/may not use the same configuration.

They were small "grain of wheat" bulbs with wire leads that were enclosed in
orange "rubbery" covers (a bit hard to get off, but doable), were inserted
into
holes in the pcb facing the front of the radio, and had the leads trimmed
short
and soldered to pads on the pcb (not soldered through holes, just bent over
and soldered to pads).

I used RadioShack SKU# 272-1092 their "#7219 Micro Lamp" which is
rated at 12V 60 mA ... since the FT-4700RH runs the lamps from a series
pass transistor from a 9VDC, you don't get full brightness from the bulbs,
but it seems adequate in the brightest setting of the radio's control. The
dim mode is dimmer, of course, but that's what you want in a situation where
you're trying not to ruin your night vision.

Again, these bulbs may/may not fit the FT2500M, but you can remove the dead
bulbs and take them to R/S for a comparison.

As I said, removing/replacing the orange rubber "boots" is a bit tedious ...
I used
a small, almost needle-pointed set of tweezers to get under the edge at the
base of
the old bulb and worked it around the circumference to help relieve the
friction as
I gently pulled on the closed end of the boot. Take care not to
puncture/tear the

boots. Putting them back on was sort of condom-like - basically roll them on.

Good luck.

73,
Carl - wk3c

Hi,

I am currently writing a long article about the history of ham radio for my website.
Can someone tell me where I could find an electronic copy of one of the first ham license ? The oldest was released in UK in 1905 but I am not sure that someone or rather his grand-grandson kept a copy... ;-)

In in the same context a copy of one of the first US license (1910-1920) 'd be much appreciated.

Of course any other one (german or french, etc prior 1920) is welcome.

Thanks in advance

# 1300. R/S HTX-202 2M (LAST DAY)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-26 15:26:19 UTC
From: Roger H Smith <roger@crystalship1.com>
Message-ID: <4v3s301jlv9l8srtq0l380nsqghd6d74om@4ax.com>
Source record: 23101

( L A S T D A Y ) Realistic (Radio Shack) HTX-202 2 meter H.T.
Radio Shack's famous "2
meter battleship". This was designed to be a no-nonsense, rugged,
frequency stable workhorse for beginner and veteran amateurs alike.
Unit is used but in good condition. Fully Refurbished: I just
replaced the lithium memory back-up battery and rebuilt the battery
pack using premium 2000 mA MiMh Cells. What does this mean? It means
that you should not have to worry about battery issues for years! The
battery pack now has more power (amperage) than it did when brand new.
Bonus Deal: In addition to the fact that I'm doing FREE SHIPPING and
NO RESERVE, I'm also throwing in a bonus like new Maxon HCB-40WX
citizen's band walkie-talkie w/rubber duck antenna and built-in
weather channels! In this package deal, you get: The HTX-202 2M, box,
2 rubber duck antennas (regular & stubby), owner's manual, battery
charger, & newly rebuilt battery pack. The Maxon CB and it's rubber
duck antenna.

Check it out here:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3079750913

Thanks for Looking and Good Bidding! 73

As I said, I know nothing of Regencies in particular, just that the usual circuit is an oscillator followed by a multiplier chain. Sounds like maybe you know the formula for this guy to use for his radio?

Hi,

In order to complete a long article about the history of ham radio I would like to know :

- QST vs CQ, what magazine gathers today the large audience ? Some states it is CQ.
- Who created CQ in 1945 ?
- Could someone provide me some electronic picture showing the first covers of QST < 1920 and CQ < 1950 ?

Thanks in advance

Control it with "PC Anywhere" or "VNC". I shipped the audio back over a service channel on the T-1 shelf..but you could do it with "SpeakEasy". It worked very well as the scanner was set up at our FM transmitter site on a discone antenna. The hilltop is 2800 ft and overlooks the Los ANgeles area. The 5KW signal on the FM band didnt really bother the PCR-100 for the most part. We are the ONLY ones on the hilltop and theres no commercial or paging transmitters there. The only amatuer stuff up there is my remote base...Eddie

The receiver is the standard of desired frequency - 10.7 mhz and then devide by 3. This gives you a frequecny of about 45 mhz for the crystal. The transmitt frequency is devided by 24 if you have a HR2A,212 or MS . This is about 6 mhz. If you have a HR2B then you devide by 18.

Not sure if you will have any luck for the crystals for packet as that is usually below 146 mhz and the old Regencys were made before anythig bleow 146 mhz was in common use.

OK. I'm talking about a REALLY remote area. I'd be putting the radio
and antenna about a mile or more away, with no direct line of sight and
no power available. Putting together a solar panel for power would be
child's play, but getting the RS-232 signals to the PCR100/1000 and
getting the audio back would be non-trivial. The best idea I could ever
come up with using RS-232 to fiberoptic converters and running the
mile or more of fiber, but that could end up being a little expensive. I've
thought about just extending the fiber until I could get line of sight (no

more than 200 yards) and then using laser or RF links to cover most
of the distance, but that isn't cheap either.

That is a commercial radio, not a ham radio. If no one here responds with help for you, you might try some commercial radio sites. There is a Yahoo Group called "LMR" that would likely have someone there to help.

<< Have a Regency HR-2A that I want to re-crystal for packet use >>

Raymond-

Receive crystals are in the 45 MHz range, series resonant minus a few Hz, (Fr - 10.7)/3. There is no adjustment, so you must replace the crystal if it is too far off frequency. The stock IF filter is fairly broad.

Transmit crystals are in the 6 MHz range, parallel resonant, about 20 pf, there is a trimmer capacitor.

One of the guys around here put one on packet and claimed good results.

I think the first qst was dec 1915. I had a repro somewhere in a dec 1955 qst. "40 year reissue" The first cover was fairly plain. I'd have to double check, but seems to me I have some of the first issues of cq in 1945...My oldest "real" qst's are back to 1935.
They went back quite a bit farther than that though. A friend of mine had a bunch of 20's issues, but they were stolen out of a mini-warehouse...At the time, they weren't that much of an issue, being they also stole all his gear..."Including not one, but 3 henry consoles, "one each for 2m,6m,and 70cm" :(

One option I didn't think of at the time...White LED's. I think if I ever have to do this again, I'm going to switch to the white leds. They last nearly forever according to the hype. My 706mk2g uses white led's. Or pretty sure anyway...MK

Thanks for the help, Mike.. But I BELIEVE my question regarding this radio back in November regarded why the channel selector displayed the number 1-6, and then letters A-F. Regardless... if I HAD asked about crystal frequencies, and if I HAD received the answer, you can be assured I would NOT have reposted the question in this forum. So it's obvious that if I HAD posted the question, I did NOT receive the information.

Have a freakin' fantastic day, eh.

Call a crystal manufacturer and tell them what radio you have and what
frequency you want to use. They have the specs for just about everything.

# 1322. R/S HTX-202 2M (FEW HRS. LEFT)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-27 07:04:21 UTC
From: Roger H Smith <roger@crystalship1.com>
Message-ID: <luqt30l4m92pv0t6k93o2i8jv4922n98v5@4ax.com>
Source record: 23123

( JUST A FEW HOURS LEFT ) Realistic (Radio Shack) HTX-202 2 meter H.T.Radio Shack's famous "2meter battleship". This was designed to be a no-nonsense, rugged,frequency stable workhorse for beginner and veteran amateurs alike. Unit is used but in good condition. Fully Refurbished: I just replaced the lithium memory back-up battery and rebuilt the battery pack using premium 2000 mA MiMh Cells. What does this mean? It means that you should not have to worry about battery issues for years! The battery pack now has more power (amperage) than it did when brand new. Bonus Deal: In addition to the fact that I'm doing FREE SHIPPING and NO RESERVE, I'm also throwing in a bonus like new Maxon HCB-40WX citizen's band walkie-talkie w/rubber duck antenna and built-in weather channels! In this package deal, you get: The HTX-202 2M, box, 2 rubber duck antennas (regular & stubby), owner's manual, battery charger, & newly rebuilt battery pack. The Maxon CB and it's rubber duck antenna. ** NEW BONUS**: Free Radio Case thrown-in!!

Source record: 23125

Que pensez vous du ft 920 tx hf / 50 Mhz

Je recherche toute information ou critique.

S.V.P

Cat�gorie : Emetteur-r�cepteur
Type : TX HF/50 MHz
Prix neuf : 1722 ?
Cote argus : 1225 ?
Tendance : (par rapport  la cote pr�c�dente)
Caract�ristiques : �metteur/r�cepteur d�cam�trique + 50 MHz. R�ception  couverture g�n�rale. Modes AM/CW/USB/LSB/FSK/RTTY/Packet (FM en option). Filtres traditionnels simplifi�s : pour caque mode, choix de Normal/Narrow. 2 commandes de VFO avec une seule cha�ne de r�ception. M�moire vocale type DVS-2 incorpor�e. M�moire de messages CW. Choix de 4 bandes-passantes diff�rentes en entr�e audio. Coupleur automatique d'antennes incorpor�. Alimentation 13,8 Vdc/22 A. Dimensions : 410 x 135 x 316 mm. Poids 11,5 kg.

2 utilisateurs ont donn� leur avis !
(rubrique "Opinions mat�riels" de Radioamateur.org)
FT-920 obtient une moyenne de 6,00/10

Auteur : Fxxx
Date : 03/04/2001
Mod�le : Yaesu FT-920
Note attribu�e : (4/10)
Commentaire : Il a remplac mon TS-850SAT. Tr�s bonne sensibilit sur 12, 10 et 6 m. L'utilisation et les performances du DSP sont mieux que sur le FT-1000MP !
Le manipulateur  m�moires et le lanceur d'appel en SSB sont int�gr�s.
Par contre carton rouge pour le comportement global en d�cam�trique. Ca devient catastrophique un jour de contest.
Filtre SSB d'origine beaucoup trop large,
filtre optionnel CW totalement inefficace (les filtres de chez Inrad sont certainement de meilleur qualit)
Pour couronner ce bilan plut t n gatif, un d sagr able ph nom ne de pompage de la CAG en SSB et CW perturbe considerablement la reception des signaux faibles ...
Cot  mission, la puissance est limit en SSB, le r glage initial de l'ALC est trop virulent.
Par contre, FB sur 6 M et bon ergonomie des commandes.

Auteur : Fxxx
Date : 13/06/2003

Mod�le : Yaesu FT-920
Note attribu�e : (8/10)
Commentaire : J'aime :
Tr�s bonne sensibilit�, Bande 50Mhz S U P E R !
Apr�s modifs tr�s bon comportement sur toutes les bandes.
DSP int�ressant.
RS-232. 2 Connecteurs antenne TX/RX.
1 connecteur pour antenne RX s�par�e.

Je n'aime pas :
Sans ajout de filtres c'est difficile de trafiquer sur les bandes basses (<10Mhz).
IMD moyen.
Manque NOTCH IF (le DSP BF c'est bien mais en IF c'est mieux).
Manque port pour transverter.

# 1327. Photos wanted for ARES/RACES Article!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-27 19:44:09 UTC
From: N8WIP <news@zoominternet.net>
Message-ID: <403f9e85_1@corp.newsgroups.com>
Source record: 23128
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,alt.radio.amateur

Greetings all... de N8WIP

I am in the final process of writing an article on ARES/RACES and I need a few photographs to put with it. The article is writen to educate today's emergency services in what the amateur radio service is all about and how it can help them in the event of a disater or emergency. The article is titled: The Multi-Million Dollar Communications Network that you probably don't even know you have.

I am looking for photographs of mobile communications centers, portable communications systems, EOC's or any other photograph that shows what ARES/RACES and the amateur radio community is all about.

Credit will be given for photographs used so please be sure to include the photographers name and the name of any person or group within the photo. Please DO NOT send photographs that are not you own unless you have permission from the photographer.

Upon request, if your photograph is used in the printed issue I will make sure that you receive a copy.

Photographs should be at least 800x600 @ 200 DPI in .JPG format and should be emailed to: news@zoominternet.net

If you have any questions please feel free to email me: news@zoominternet.net

I have the following original Heathkit manuals for sale at $15.00 each shipped to US mailing address. They are in good shape, with the usual check marks by the assembly steps, etc. The schematics, fold-outs, and whatever separate assembly drawings came with them are included.

IM-21 Vacuum Tube Voltmeter

S-3 Electronic Switch

IG-82 Sine-Square Wave Generator

IB-2A Impedance Bridge

Do the obvious to the email address

k9krwnospam@arrl.net

Thanks,
John

## 1329. FS Tech Manuals for BC-603, BC-604 etc.

Date: 2004-02-28 10:40:48 UTC
From: Thierry <"To answer me in private use http">
Message-ID: <4040702e$1_1@news.vo.lu>
Source record: 23133

Hi,

Browsing the Internet I found this address http://www.arcsandsparks.com/
"PV Scientific Instruments" sales classical electric apparatus like radio
crystal , radio kits, vacuum tubes like X-ray, static machines, as well as
classic reprints.
Of course prices are not really cheap but all the device display a good size
and looks able to work...
Excellent for a small museum, to place on you shelf or as educational
material.

Good to know.

Thierry, ON4SKY
http://www.astrosurf.com/lombry/menu-qsl.htm
PS. I have no interest in this business. ;-)

I believe that the founder of CQ was Wayne Green (W2NSD) who then went on to
found Byte magazine and
another ham magazine.

The ham magazine was 73. Would you believe that back in the 60's you
could get a life membership to 73 for $73? Would have been a good
deal until the magazine went belly up last year.

It was far better than that. The original price for life subscription to
73 was $37 US, chosen because it was a transposal of the two digits in
the magazine's name. Bill Turner who inhabits some of the newsgroups
and wrote many an article for the magazine, bought a life subscription
at that level, and says that yes indeed he did get it for life, with
the last issue being the last issue the magazine published.

I don't know how much the life subscription price varied over the years.
I do remember much being said about a $73 subscription in 1973.

I have the following and love a good trade.

* Icom IC-2000 2M mobile transceiver w/bracket
* Icom IC-V8000 2M mobile transceiver with control mic and bracket
* MFJ-949E VersaTuner II Antenna Tuner
* MFJ-962E VersaTuner III Antenna Tuner
* HTX-420 Dual-band Handheld with Charger
* Hustler Mobile HF Antenna
Complete w/ Foldover & Shorty masts and Heavy Duty Spring
Coils for 75, 40, 30, 20, 15 and 10 meters
* Diamond Model HV-7A HF/VHF/UHF Antenna (UHF mount)
Covers 2M, 70cm, 6M, 10M and 20M
* Larsen Model PO-2/70 2M/70cm Mobile Antenna (UHF mount)
* Diawa MOdel DAX-3000 High Gain 2M/70cm Mobile Antenna (UHF mount)
* Icom MOdel AH-32 2M/70cm Mobilie Antenna (Uhf mount)
* Hamsticks for 75, 40, 20 and 15 meters
* Palomar Antenna Noise Bridge
* Autek Model RF-1 RF Antenns Analyzer
* Downeast Microwave MOdel DEM 50-28 6 meter Receiving Converter

I will not sell these items. What do you have to trade?

Though they lived up to their end of the contract until they shut their doors, I have to wonder if that wasn't part of their problem? Can you imagine the trade off in costs as all went up, not counting postage? They had to have lost some money. I'm not suggesting that was "all" of their problem, but it had to take a bit of a bite. Sounds almost ludicrous. I can't recall if the ARRL's "lifetime" operates the same. Been a while since I've looked at one. But aside from other issues, maybe that is one of their problems too. CL

FWIW, I have a July, 1988 73 magazine. On the masthead, it
shows -- Editor in Chief - Wayne Greene, W2NSD/1.

Life membership for ARRL is 25 times current, single-year rate, or
$975 ($900 for seniors.) When I got mine back in the late 70's, it
was $250. A lot then, but it has proven to be a good decision.
Depends on your age I suppose.

But any magazine that offers a life subscription faces the same problem.
I have no idea how common they are, perhaps they only exist in the independent

magazine market, and less so with each passing year. I thought the National Geographic used to offer life memberships, but I sure haven't seen mention of it in recent years.

Remember, $37 was quite a few years of subscriptions back in the early sixties, and may have been a fair chunk of money, generally. Selling them early would have gotten some extra money when it may have been crucial, and some guaranteed subscribers when they were needed to attract advertisers. It was a gamble on the part of the subscribers, since it was a new magazine. If it had died after a few years, the life subscribers would have lost money. And after forty years, likely a lot of those early life subscribers had died, lost interest in the magazine and told them to stop sending it, and even people who moved who simply didn't bother providing a new address. So there may have been only a handful of subscribers who paid a paltry sum.

I know I was tempted by the $73 in 1973, but I was too young to have that kind of money then. It is an investment, but it's also a gamble.

But realistically, having some life subscribers around was not the problem of the magazine. It had deteriorated tremendously over the past 15 or so years, and that lessened the readership. And as the readership declined and changed, that had to change the magazine further, increasing the spiral. I bought the magazine every month for about twenty years, and then about ten years ago I started missing issues. There were fewer articles that interested me, and little that would justify buying it then "because I might need an article later". The magazine started getting skimpy, and full of errors. It started becoming sporadic on the newsstand here (there were rumors of it's impending death back then) and then they cut back on distribution. It had been some years since I saw a copy. Yes, that was a cost cutting, but it also meant it wasn't out there for people to know about it and subscribe.

It died because it was time for it to die, though I wish it had remained like it was in its prime and kept going forever. If the magazine had been healthy, the subscriber/readership base would have been enough to attract advertisers and keep it running. A few old life subscriptions merely meant it stopped one month than a few months later.

That has been true since the beginning of 73 magazine. I still have the January 1965 issue that contains a noise limiter I "designed." In those days, 73 was a great ham radio magazine full of good articles. Wayne had a good run, but nothing lasts forever.

Actually, there was that period in the eighties when Wayne had sold the
magazine (well he sold his magazine empire to one of the computer magazine
publishers who wanted the computer magazines) and was not in charge of it.
He kept writing editorials, so I never gave it any thought until they stopped,
and the editor or publisher mentioned that Wayne did not have his heart in it.
The magazine was healthy in that period, but I really think it lead
to the magazine's ultimate downfall. It was being run as a business, not
something coming out of a hobby interest, by people who were not hams.
Wayne eventually got the magazine back, for the simple reason that the
publisher really did not know much about it. I'm pretty sure they wanted
to kill it, but gave it back to Wayne instead. The real decline did not
come for some years, but I think the magazine stalled in those years,
losing subscribers and old time writers, so the downward spiral began.

Now that you mention it, I do seem to recall something along those
lines. Haven't kept up with 73 or CQ for a number of years because of
the ridiculous price of magazines in general. I still remember when
Life Magazine was 10-cents. Now magazines in general are $5 and up!
I refuse to buy any.

## 1360. Advice wanted:lowband rig

Newsgroup: rec.radio.amateur.equipment
Date: 2004-02-29 17:18:38 UTC
From: Steve <zarco@sonic.net>
Message-ID: <O9p0c.4559$_3.72195@typhoon.sonic.net>
Source record: 23062

Hi Gang,
The junkfest season starts here next weekend, and I've been
thinking about searching for a newer, more capable low band rig.
My current rig is an old TS-820S which I am very pleased with.

Here are my requirements;

tube finals, 160-10 meter bands including the newfangled (!) WARC bands,
100 watts out, internal power supply

Would be nice, but not necessary;

12 VDC supply built in, general coverage receiver, 6 meter capability,
a Kenwood rig, AM

Yes, I know there is a lot of info on the web about rigs and specs. I'm
hoping for some model numbers to start with. Thanks!

Steve

Steve-

It would appear you have described a TS-830, although I don't know if it has
Six Meters. I can't think of any other Kenwood rig that would meet your
requirements. (Isn't there a TS-870?)

> 2.5, 423mhz 1.2, 431 2.1, etc...

You don't mention it in your note, but are you in an area of high UHF usage?
Could it be strong signals from other nearby UHF stations who might be
influencing your readings?

The readings of 259's (I don't know about other models or other
manufacturer's analyzers) can be affected in the proximity (a few miles) to
AM (650-1650 kHz) radio stations when doing tests at 160m or even 80m.
Maybe similar effects are experienced with nearby UHF stations (Paging,
com'l comm, etc.).

good luck,

dale, kg5u

Good luck! I would think you already own one of the last rigs made
with tube finals. Probably not much else available of later vintage.

From: Laurent <l.bury@wanadoo.fr>
Message-ID: <c1t94s$vra$1@news-reader4.wanadoo.fr>
Source record: 23066

I just bought a used MFJ-9420 (SSB 20m transceiver).

I wondered if anyone tried to retune it for operation in SSB from 14100 to 14300 instead of 14150 to 14350KHz ???

By the way, it's a surprising little toy with a great receiver (VU2 and W sation heard from Europe in my car !) and it is amazing to be called when using it with a small vertical mobile antenna !

Also the built in power supply seems to have gone the way of the dodo bird. None of the current Kenwoods or Icoms come with a built in power supply. Of the Yaesu models, only the FT-1000D has the power supply built in but this radio is HF only.

If you want built in 6m capability as part of the radio, you need to look at radios made in the last 5 to 10 years. The Kenwood TS-570S(G) but not the TS-570D(G) covers HF+6m and is all mode. It does not have tube finals. It does not have a built in power supply. The TS-2000 covers HF+6m+2m and is all mode. Again it doesn't have tube finals and doesn't have a built in power supply.

YOu left out the most important thing. How much money do you plan on
putting into the rig ?

While the tube finals are what you want, it may be time to rethink that to
the solid state finals as the tubes (inexpensive) and tube rigs are getting
harder to come by. By now some of them are getting old enough that the
capacitors are starting to give problems.

Sounds like you are looking for a Kenwood TS-530S or TS-830S. The built-in 12 volt power supply kind of rules out tube finals, except for the old TS-520, which doesn't have WARC. Ditto for the 6M, not too much tube output stuff did that.

If you drop the requirement for tube finals, it's easy, except for the built-in power supply.

Source record: 23073

Hi all,

Ham Radio Deluxe v1.2b, build 308 is now available

The 480 support is MUCH better :-)

Download info: http://www.ham-radio.ch/forums/viewtopic.php?t=45

Changes/improvements

Auto-connect option in the Connection window
More Jupiter options
Added IC-7800 support (first phase)
Yahoo! groups replaced with forums in the help menu
PSK31 Deluxe F8 options Echo Input / Echo Output now explained properly.
PSK31 Deluxe bugs fixed:
Clock offset,
TX offset,
TX delay,
Switching between PSK63 and PSK31 CPU usage.
Scanning favourites - selection of favourites improved
Mapper now uses real maps
Added much more TS-480 support
Added IF Shift for TS-570 and TS-870
Memory management for Kenwood TS-480
Extended menus for TS-480 and TS-2000

145, Pete/Igor PH1PH - G7ECN

> led's. Or pretty sure anyway...MK

Mark,

You'd have to do two things ...
first find white LEDs that would fit in the orange rubber "boots" (and the
holes in the PCB),
second, you'd probably have to change the (low resistance) series SMT
resistors on the PCB
for higher value ones (unless you found white LEDs that fit AND had
appropriate valued internal
current-limiting resistors ...

No such rig exists. Go with an external power supply and solid state
finals, and plenty of rigs have 160-10, with WARC bands. A few also
have 6 meters.

Look at the "product reviews" at eham.net. That will be the best way
to familiarize yourself with what might be out there.

# 1384. Re: QST vs CQ

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-01 01:59:44 UTC
From: Don't Reply to this address <s_p_a_m@comcast.net>
Message-ID: <4042990D.CEC650A5@comcast.net>
Source record: 23086

It's sort of interesting as Wayne got further and further into black helicopters, government plotting against him and you and me, little green men, oil company plots to make sure we don't get high gas mileage and cancer cures that the medical establishment is trying to keep from the people -- 73 sank further and further.

Could be just coincidence but it sure turned me off.

Yes, I considered $37 for a lifetime subscription when it first came out and was sorry I didn't purchase it. They paid me more than that for an article of mine they published on modifications to a Heathkit piece of gear. I was impressed at the time (mid 1960s) that they wouldn't publish it until Heathkit "blessed" it.

It used to be the magazine I picked up and read first among all the ham magazines.

Somewhere I still have a pristine copy of the first issue of Byte... I'm afraid I don't have the first issue of 73.

## 1385. Vanguard Labs Satellite Receiver

# 1386. Re: Advice wanted:lowband rig

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-01 03:00:52 UTC
From: Steve <zarco@sonic.net>
Message-ID: <EHx0c.4679$_3.73641@typhoon.sonic.net>
Source record: 23088

Actually. many older rigs used external power supplies such as
the Heathkit SB and HW series rigs, many of the Hallicrafters
(HT-44, etc) and Collins rigs (S-line). Not that many 100 watt
tranceivers used internal supplies. The reason its gone the way of
the dodo bird is because of solid state output stages that require
lotsa current.

Cost....I'm looking for used, older stuff at a junkfest. Take a
guess! ;-) Don't even mind taking on a fixer-upper if
the price is right.

I prefer tube finals for several reasons. They are inherently more
forgiving to things like high SWR, mistuning, etc. Plus I have a
nice stock of 6146's. I feel very comfortable working with tubes,
replacing capacitors, etc. Also true for transistors, but replacements,
when they are needed, are expensive and a pain to install.
Over the years I have come across many rigs with solid state
finals for sale, cheap (blown outputs). I can take a hint!

Thanks to everyone that has offered their advice. Its greatly
appreciated. Maybe if I win the Lottery, I'll buy a new radio.

Steve W6SSP

I am trying to replace the 3 display lamps in this rig. I have taken it apart far more than I ever intended. Does anyone know the lamp number? They are about 1/8 in. in dia., 1/4 in. long. and 13.8 volts.
Maybe an LED replacement?

From: Jim Chumbley <jamesfchumbley@att.net>
Message-ID: <H1F0c.123530$hR.2372302@bgtnsc05-news.ops.worldnet.att.net>
Source record: 23091

: I'm just looking for the best rig for CW.

Pete,
I too run only CW. I've run CW only since my first license in '72. Been Extra now for 30 years, since '74.

The transmitter is never the issue. Any rig with a clean output waveform that supplies your required power level, 100 W, will be a perfectly satisfactory transmitter. The key is the receiver. I think that the Yaesu rigs have the best RX in the world, and am saving pennies and dimes to buy the new FT-1000 MP Field.

Apparently I am not the only man who thinks so. Johan Sebastian Bach wrote a beautiful solo about this very idea. My wife and I had it sung at our wedding back in 1967:

Yaesu, Joy of Man's Desiring

VY 73 DE N6UF,
Jim

## 1390. Antenna Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-01 15:19:58 UTC
From: Tuuk <bangkokbob5001@yahoo.com>
Message-ID: <lwl0c.1498$n37.139246@read2.cgocable.net>
Source record: 23092

Hi
I have the MFJ 989C, and I am noticing that I can tune antenna to low SWR but I also have noticed that the SWR often was jumping or spiking and very unusual. I thought it may be coax or antenna or a short but then I noticed also that the inductance coil is very sensitive. If you touch it or tap it this will cause the SWR to spike. Also when it spikes, if you put a little pressure on the Inductance coil knob it will solve the problem. Anyone else have situation such as this? What did you do to fix the problem? I opened it up and cleaned the contacts where I thought the problem was but still didn't correct the problem.
Any ideas ???

## 1391. Heathkit AM-2 manual?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-01 16:22:37 UTC
From: Joshua G Senecal <senecal@ucdavis.edu>
Message-ID: <Pine.LNX.4.44.0403010816160.2433-100000@pc12.cs.ucdavis.edu>
Source record: 23093

Hi All,

I was given a Heathkit AM-2 SWR bridge, operating condition unknown. It has apparently been modified, as there is an extra toggle switch on the front.

I'd like to check this thing over before I attempt to use it, but I don't have a manual. I've searched on the Internet but haven't found anything. Does anyone have a manual or schematic for this in digital form (PDF, TIFF, etc.) that they would be willing to e-mail?

Thanks!

# 1399. Kenwood TM-732A Display Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-02 06:04:25 UTC
From: Dick <LeadWinger>
Message-ID: <5o88401ogc9j5pt07bj298r6dqn3r50ib8@4ax.com>
Source record: 23001

I noticed tonight that my Kenwood TM-732A has suddenly developed some garbage in the display over about 25% of it. Looks like fern leaves or something like that. The normal display items are still there. The garbage is in the background, but makes the display very hard to read. Am I looking at a new display? The radio does run 24/7 monitoring our ARES repeater. Maybe it just finally did it in.

Dick - W6CCD

## 1400. UT-102 activation

It's an LCD, right? Sounds like it has developed a leak, and air is
getting into the liquid crystal layer. If that is the case, then it
is indeed new-display time.

Yes, it is an LCD display. The garbage appears as soon as power is applied, and before the actual display appears. I was hoping maybe it was a display driver that was going, but I agree it looks more like the LCD itself. I never heard of the leaking problem. That's something new to me.

I wish it were new to me, but it isn't. The Boy had his Palm i705 PDA
in his pocket, unprotected, when he sat down, and pushed something
else in the pocket up against the screen hard enough to crack it. As
a result, air is getting into the liquid crystal layer. Initially, it
showed as a fern-leaf-like change in the display; it has become _much_
worse over time, and now I get to order a new display and install it.

In the case of your TM-732A, it sounds like a leak at the edge. You
might ask Kenwood Service if this is a known problem. If it is, they
might repair it, or ship you a new display.

*sigh*

Pictures were included inline in his second post to this non-binary
group. Someone has, quite properly, cancelled the post, which was
something like 15K lines long.

Will,

If you'll mail them to me, I can put them up on my website for folks
to look at, or you could put them on your site if your ISP provides
one. But posting them to this group is definitely not on.

Thanks.

> but I also have noticed that the SWR often was jumping >

I had a similar problem when I bought a second hand 949C manual tuner. I found an earth tag to the metal case was not making proper contact, I cleaned it up put in a new bolt and washers and it's been fine since,
Hope you find your bad contact.

I have the following items for sale that are excess to my needs. Prices do not include shipping. I will ship overseas.

Solar Capacitor Exam-eter Capacitor Checker.......$80 plus shipping
This is a multi-function vintage capacitor tester which tests capacitance, resistance, power factor, leakage, and insulation resistance. Also has an ac/dc VTVM built-in. This is a working unit in nice condition. Includes a copy of the manual.
http://members.cox.net/radiostuff9/exameter.jpg
http://members.cox.net/radiostuff9/exameter2.jpg

Heathkit IG-42 Signal Generator.....$30 plus shipping
This is the higher end signal generator from the 1960ï¿½s with shielded compartments and better performance than the lower end Heathkit signal generators. Covers 100 kHz to 30 MHz in 5 bands with both CW and modulated CW functions, a step attenuator with steps in microvolts, adjustable modulation and jacks are for external modulated source No manual but they are available from several sources. Unit works in the CW

mode but modulation does not work.
http://members.cox.net/radiostuff9/heathig42.jpg
http://members.cox.net/radiostuff9/heathig422.jpg

Heathkit SG-6 Signal Generator.....$20 plus shipping
Nice compact working unit covering 160 kHz to 150 MHz in 5 bands.
http://members.cox.net/radiostuff9/heathsg6.jpg

Weston Electric Vintage AC Voltmeter and AC Ammeter.....$45 plus shipping
These are neat bakelite meters that must be 50-60 years old. Voltmeter covers 0-300 Volts in two ranges through two separate binding post connections. Ammeter covers 0-20 amps in two ranges.
http://members.cox.net/radiostuff9/ac_meters.jpg
http://members.cox.net/radiostuff9/ac_meters2.jpg
http://members.cox.net/radiostuff9/ac_meters3.jpg

Precision Apparatus Series 85 VOM.....$30 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Triplett 630-PL VOM.....$25 plus shipping
Nice working VOM. Needs new battery for highest resistance scale - all other ranges are OK
http://members.cox.net/radiostuff9/triplett2.jpg

Nye Viking Phone Patch.....$25 plus shipping
Working unit in excellent condition with cables.
http://members.cox.net/radiostuff9/viking_patch.jpg

RCA Advanced Voltohmyst VTVM.....$40 plus shipping
Older RCA VTVM in working condition with probes. Case has been repainted

and a metal handle has been added.
http://members.cox.net/radiostuff9/rca_voltohmyst.jpg
http://members.cox.net/radiostuff9/rca_voltohmyst2.jpg

Weston Antique Milliameter.....$30 plus shipping
This is a neat antique meter. Working in very good condition. Measures
15, 75 and 300 mA through separate binding post connections.
http://members.cox.net/radiostuff9/weston_meter.jpg
http://members.cox.net/radiostuff9/weston_meter2.jpg

Book - "The Portable Radio in American Life" .....$25 plus shipping

This is a 260 page book published in 1991 covers the history of portable
tube radios and transistor radios from the 1920's to the 1970's.
Includes historical information on Sony, Zenith radio,
Admiral radio and many other brands who built portable radios. This is
an excellent reference book if you collect portable and transistor
radios. These are new books. This is a great radio reference book. I
have 1 of these books left.
http://members.cox.net/radiostuff9/portableradiobook.jpg

Set of crystals for the Navy TDQ transmitter...$60 plus shipping
Their are 24 crystals of which 23 ( a few duplicates) are the original
Navy crystals; one crystal is not. The wooden box is in great shape
also. Here are the frequencies all in MHz: 5.80,12.90,13.10, 13.26,
13.50, 13.74,13.75,
13.82, 14.02, 14.02, 14.30, 15.62 ,15.64, 15.66, 15.68,15.78,15.84,
15.85, 15.86,15.86,15.86,15.92,15.92, 16.00, 16.24
http://members.cox.net/radiostuff9/tdq_xtals.jpg
http://members.cox.net/radiostuff9/tdq_xtals2.jpg

Amiga 1000 Computer System with Goodies .....$50 plus shipping
Includes the computer, floppy drive, mouse, keyboard, user's manual,
printer cables and software. This is all untested. There is no monitor
despite being shown in the photo.
http://members.cox.net/radiostuff9/amiga_comp2.jpg
http://members.cox.net/radiostuff9/amiga_comp9.jpg
http://members.cox.net/radiostuff9/amiga_comp6.jpg

Thanks for looking.

Looks like precision low power watt meter... possibly for microwave.
The second item looks like a quality AC voltmeter... good for precision
audio level work.

Both should be worth something for commercial lab type work.

Ed

# 1425. NEED NC-183D knobs and S-meter

Hi,

This short message to tell you that I published a short history of amateur radio, 10 pages illustrated...
http://www.astrosurf.com/lombry/qsl-ham-history.htm

It is mainly dealing with the US ham history replaced in its socioeconomic context of the time, most of their invention or discoveries having been re-used by other nations. But to please the non-US hams as well as my ego, I tried to include some other national events from UK, France or Belgium for example. These are those "small" event that I tried to find out and that will be added this study in the future.

It contain of course several links and deal with the space program, a few words about radioastronomy, and more. Even the first satellite tracking station from Cordiglia brothers (Torre Bert) is discussed, but in a specific and separate file due to some alleged claims.

My main radio menu is available at
http://www.astrosurf.com/lombry/menu-qsl.htm

Your question tells me that you should be asking MFJ that question.

Only they will have the answer to what they can do and not do.

# 1437. PK-232 Upgrades??

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-04 06:37:51 UTC
From: gary.s@pixie.co.za
Message-ID: <de703c5c.0403032237.79d96c11@posting.google.com>
Source record: 23039

Hi All,

Can anyone tell me if Timewave still exist. I have sent numerous email's and faxes requesting PK-232 upgrades (MBX and DSP) and have had no response. In desperation I sent requests to Timewave distributors in Europe to the same end - no reply. Is Timewave / Pk-232 / Upgrade used in the same sentence a dirty word?? Or are people (and fellow Ham's) who are not from the US / Europe count for nothing?

Anyone that can help with these upgrades, I would be grateful to hear from you.

>
> Suggestions please.... Thanks, Pete

Dunno, I think the 756 with a cw filter is good enough for gov work. I
mean, can you really hear something on another brand that you wouldn't
on the 756? I sort of doubt it. I'm sure others may be better CW rigs,
but I would think what you have is capable enough. It's no slouch
radio. Heck, for portable these days and even many times at the house,
I'm usually on a lowly 706mk2g. My old TS-830 is a very good cw rig.
The best I have anyway...And thats comparing it to drake twins, icom
730,706, etc..
The old TS-830 with a cw filter is a mean machine. With the VBT, you
can dial up any filter width you want. In my case with the stock 500
hz -455 filter, down to appx 150 hz width. I rarely if ever use it
that narrow. Then you can peak the signal with the IF shift. No DSP
artifacts or blowby. Maybe not as steep sloped as DSP, but it's not
far off. Even a 830 with no cw filter can dial down to 500 hz just
using the VBT. Maybe not as good as some of the new fangled high end
stuff, but for the used radio price, pretty good. Same for the old
930s and 940's. They had much the same abilities with both VBT and
slope tune. Get a 500 hz filter for your 756 if you don't have one
and like to work busy bands like 20m. MK

If I remember right, the 2c also used the same knobs as the 2b. "black with little inner chrome trim rings". I still have an old 2c and 2cq.

<< I recently bought the Icom UT-102 speech syntesizer for my IC-706MKII,but it doesn't say a word.Is a special activation procedure neccesary ? >>

Tom-

I have the synthesizer in my older IC-706. I installed it so long ago, I can't recall what I did to set it up.

Currently it doesn't do anything unless I press-and-hold a button to the left and below the tuning knob.

From: gbradburn@nc.rr.com
Message-ID: <9b4b41d5.0403040619.4b2ca0a0@posting.google.com>
Source record: 23043

Greetings,

I recently got back an Alinco DJ-560T that I had loaned out and it's
missing the EDC-21 charger. Do I need to get this exact charger or can
I use any 9V DC adapter to charge the battery pack?

Can you charge the battery with the EDC-13 Cigarette lighter adapter
or can this only be used to operate the radio?

Thanks,

Greg Bradburn

<< Can anyone tell me if Timewave still exist. >>

Gary-

I just checked and found http://www.timewave.com/ was still there.

I contacted them last July, and ordered a new manual for my old PK-232. At that time, they did offer an upgrade.

My point of contact was Mr. Kevin Foster, purchasing@timewave.com. Their address was Timewave Technology, Inc., 501 W. Lawson Avenue, St. Paul, MN 55117. Their telephone number was (651) 489-5080.

# 1458. FA: Yaesu FT-ONE, Perfect Condition, NR

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-05 04:52:36 UTC
From: Google@You-and-Improved.com
Message-ID: <7f6f246a.0403042052.d2be855@posting.google.com>
Source record: 22960

Yaesu FT-ONE transceiver. Perfect condition.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3082784250

Silent Key Auction for Herb Petereit, W0AFY. If you knew Herb, you knew that he was one of the "old timers". One of his first jobs after moving to Omaha, Nebraska, in the 60's was building Galaxy 500's at World Radio. He knew his gear inside and out, knew how everything worked, and took a lot of pride in keeping everything running in top shape. For many HAMS in the Omaha area in the 70's and 80's, Herb was the guy to go to when you needed help. Herb passed away on Veteran's Day, November 11th, 2003, after a severe bout of asthma. He was 71 years old. Herb is pictured here with his high-school sweety and cherished wife of 47 years, Bonnie. All procedes from these auctions will go directly to Bonnie.

This Yaesu FT-ONE was Herb's main rig. The following is from his own notes:

---

07/24/87 08:51pm My new Yaesu FT-ONE

Purchased a used Yaesu FT-ONE today (January 26, 1987) from Amateur Electronic Supply. Salesman
was Dale.

From Bill of Sale:

1 FT-ONE #4086 Used FT-ONE with 4 filters, RAM, FM,
1M010186 $1299.00

Later I bought a service manual for $28.00 shipped UPS.

On 3-5-87, I converted the Transmitter to be able to transmit on all frequencies on the FT-ONE.

Note:
July 24, 1987 Update:
Since the Purchase of the FT-ONE, I have added the CW Keyer board but I will have to make some slight adjustments whenever I have the cover off the radio at some future date.
The radio is working flawlessly and I now drive the Heathkit SB-220 purchased at the Sioux City Hamfest from an amateur Operator from Griswold Iowa.

---

Be sure to check out the other auctions from this seller. We'll be adding items from his ham shack regularly, so be sure to check back often.

If you have any questions, send me an email to Mark at you-and-improved dot com.

Message-ID: <J9b2c.384$dl4.12282@nnrp1.ozemail.com.au>
Source record: 22965

Your problem is the same one I faced a few months ago. Sounds like the rotary encoder is shot. I ordered one from a Yaesu distributor, the cost was about $35.00 US. Took me about two hours to fix and now is as good as new. Is a typical 757 trait....

All the best and here's to many more hours of DXing.

# 1476. FA: Yaesu FT-ONE, Perfect Condition, NR

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-07 19:02:05 UTC
From: Google@You-and-Improved.com
Message-ID: <7f6f246a.0403071102.7aa196c2@posting.google.com>
Source record: 22978

Yaesu FT-ONE transceiver. Perfect condition.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3082784250

Silent Key Auction for Herb Petereit, W0AFY. If you knew Herb, you knew that he was one of the "old timers". One of his first jobs after moving to Omaha, Nebraska, in the 60's was building Galaxy 500's at World Radio. He knew his gear inside and out, knew how everything worked, and took a lot of pride in keeping everything running in top shape. For many HAMS in the Omaha area in the 70's and 80's, Herb was the guy to go to when you needed help

Herb passed away on Veteran's Day, November 11th, 2003, after a severe bout of pneumonia. He was 71 years old. Herb is pictured here with his high-school sweety and cherished wife of 47 years, Bonnie. All procedes from these auctions will go directly to Bonnie.

This Yaesu FT-ONE was Herb's main rig. The following is from his own notes:

---

07/24/87 08:51pm My new Yaesu FT-ONE

Purchased a used Yaesu FT-ONE today (January 26, 1987) from Amateur Electronic Supply. Salesman
was Dale.

From Bill of Sale:

1 FT-ONE #4086 Used FT-ONE with 4 filters, RAM, FM,
1M010186 $1299.00

Later I bought a service manual for $28.00 shipped UPS.

On 3-5-87, I converted the Transmitter to be able to transmit on all frequencies on the FT-ONE.

Note:
July 24, 1987 Update:
Since the Purchase of the FT-ONE, I have added the CW Keyer board but I will have to make some slight adjustments whenever I have the cover off the radio at some future date.
The radio is working flawlessly and I now drive the Heathkit SB-220 purchased at the Sioux City Hamfest from an amateur Op-erator from Griswold Iowa.

---

Be sure to check out the other auctions from this seller. We'll be adding items from his ham shack regularly, so be sure to check back often.

If you have any questions, send me an email to Mark at you-and-improved dot com.

Have you any wool for all the insulation you will require?

(insert punch line here)

# 1490. FA: Heathkit SB200 Linear Amplifier, Works Great, NR: EBay

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-08 00:12:57 UTC
From: Google@You-and-Improved.com
Message-ID: <7f6f246a.0403071612.75504e8a@posting.google.com>
Source record: 22992

Heathkit SB-200 Linear Amplifier, Works Great

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3083371445

Silent Key Auction for Herb Petereit, W0AFY. If you knew Herb, you knew that he was one of the "old timers". One of his first jobs after moving to Omaha, Nebraska, in the 60's was building Galaxy 500's at World Radio. He knew his gear inside and out, knew how everything worked, and took a lot of pride in keeping everything running in top shape. For many HAMS in the Omaha area in the 70's and 80's, Herb was the guy to go to when you needed help

Herb passed away on Veteran's Day, November 11th, 2003, after a severe bout of pneumonia. He was 71 years old. Herb is pictured here with his high-school sweety and cherished wife of 47 years, Bonnie. All procedes from these auctions will go directly to Bonnie.

---

This is a Heathkit Model SB-200 Linear Amplifier that Herb used with his Yaesu FT-ONE. Herb originally purchased this amp in 1987 at the Sioux City Hamfest from an amateur operator from Griswold Iowa, and it's been a rock solid amp ever since. Click here to see the eHam.net reviews:

http://www.eham.net/reviews/detail/1162

This amp was confirmed to be in perfect working order at the time of this auction. Added to the final auction selling price will be the actual cost of shipping and shipping supplies. It weighs 36 pounds. Dimensions are 8" high x 15" wide by 15" deep. This product is sold AS IS and all sales are final. Payment by PayPal preferred, but certified checks or money orders will be accepted as well.

Be sure to check out the other auctions from this seller. We'll be adding items from his ham shack regularly, so be sure to check back often.

If you have any questions, send me an email to Mark at you-and-improved dot com.

# 1491. FA: Heathkit HO-10 Monitor Scope, Works Great, NR: EBay

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-08 00:39:31 UTC
From: Google@You-and-Improved.com
Message-ID: <7f6f246a.0403071639.35e91f94@posting.google.com>

Heathkit HO-10 Monitor Scope, Works Great

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3083377477

Silent Key Auction for Herb Petereit, W0AFY. If you knew Herb, you knew that he was one of the "old timers". One of his first jobs after moving to Omaha, Nebraska, in the 60's was building Galaxy 500's at World Radio. He knew his gear inside and out, knew how everything worked, and took a lot of pride in keeping everything running in top shape. For many HAMS in the Omaha area in the 70's and 80's, Herb was the guy to go to when you needed help

Herb passed away on Veteran's Day, November 11th, 2003, after a severe bout of pneumonia. He was 71 years old. Herb is pictured here with his high-school sweety and cherished wife of 47 years, Bonnie. All procedes from these auctions will go directly to Bonnie.

---

This is a Heathkit Model HO-10 Monitor Scope, designed to allow the operator to "see" transmitted and received signals as you hear them on your receiver, or transmit them with your rig.

It easily connects between your exciter / transceiver and the antenna allowing you to check your transmitted cw, am, or ssb waveforms to ensure against key clicks, overmodulation, etc. You can also easily connect it to your amplifier and watch the waveform to ensure you are operating it linearly.

If your receiver has a 455kc IF, as many do, you can tap into it (directions in the manual) and actually see the waveform of the signal you are hearing in any mode. This is a great tool to help you operate with quality audio, and let your friends know how their exciter is performing. It even include a two-tone audio generator to help you tune your amp!

Included is the original Heathkit manual.

This scope was confirmed to be in perfect working order at the time of this auction. Added to the final auction selling price will be the actual cost of shipping and shipping supplies. It weighs 10 pounds. Dimensions are 5.5 " high x 7.5 " wide by 10.5 " deep. This product is sold AS IS and all sales are final. Payment by PayPal preferred, but certified checks or money orders will be accepted as well.

Be sure to check out the other auctions from this seller. We'll be adding items from his ham shack regularly, so be sure to check back

often.

If you have any questions, send me an email to Mark at
you-and-improved dot com.

Why 3-phase power ?

Because it's more economical to generate and transmit.

It keeps down your electricity bill.

# 1493. FA: Alinco DR-135T VHF FM Mobile Transceiver, NR: EBay

## 1506. Radio Shack 220-306 frequency counter -- fried?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-08 18:14:24 UTC
From: Ken <cprstn54zz@att.net>
Message-ID: <p4dp4059k051k09heh89qgam4dljr18ebq@4ax.com>
Source record: 22908

I bought one of these last year and it worked OK for RF measurement.

I am now for the first time trying to use it to measure the [digital]
frequency at a chip pin. I set it for CMOS/TTL range. It reads 4.9
MHz open circuit and shorted out. Sometimes it reads zero. Nothing
changes when I test the chip pin. I get the same result using an
oscilloscope probe and solid copper leads.

There is supposed to be a 5KHz signal at the pin. I can hear a tone
roughly of that frequency (very high) when I put that pin on the
input of an amplified speaker.

Is my meter fried? Or am I doing something wrong?

Ken KC2JDY

I have an mfj frequency counter -- inexpensive.

It works okay on strong signals; about 10 watts & up. Doesn't do worth
a darn on QRP signals, 5 watts or less. I'm guessing your chip doesn't
put out enough power for the frequency to be detected. You may need a
more sensitive lab quality detector.

The TTL input is hard-wired to the source; there is no sniffing.

The specs for this meter say 1.5 V max for the TTL signal. I do have
an RF voltage probe; maybe it can measure a square wave digital signal
that is always positive. Maybe the signal is something like 10 mV and
the meter won't read that low.

If that is the one with the High Impedance setting, try that! The direct setting may not work right. CL

Tried 'em both. No help.

Also, I measured the voltage at the subject pin with a Fluke RF
voltage probe: 7 millivolts. That is probably 1/100 of what the
meter needs on the TTL setting.

This is starting to look like an oscilloscope job. To bad I just
returned one I had borrowed [for six months].

Here in northern Illinois the utility is required to provide
3 phase power without additional charge if a customer can
demonstrate a single motor load in excess of 10hp or an
aggregate exceeding 25.

You can have 240 3 phase or 120/208 or 240/120 high leg
delta (means 1 leg to earth ground has an unusable
malformed waveform.

What makes you think 208 is wimpy?

Go to Google and search for "atomic clock". In the first 20 or 30
listings you should find hobbyist sites that have diagrams and maybe
even kits.

It coould be just they business policy...
Three phase is less often used and mostly for commercial applications,
so they could be thinking they can charge more...
I don't know for sure. I live in Finland (in norhern Europe) and
here the three phase power to building is the normal way to supply
power to the buildings. Single phase feed to house is rare
(only used on some old small houses).

Is there any significant use of line to line voltage for domestic
appliances, or is it all single phase to neutral (240V)?

<< What's the jagged keyhole next to the power knob?
73, K3DWW >>

Wondered of what you spoke....checked the photo...the remote head is off, the "jagged keyhole" is the passthru for the mike cable. It does look weird, unless you've owned the rig...never thought of it in that way before!

Decent little rig...NB is not great and no internal iambic keyer, but other than that, works fine and is tough. Only reason I swapped mine out for a Yaesu FT857 is due to needing just one box for HF/6/2/70cm.

Actually it is not a problem at all to provide 3 phase 240
combined with single phase 120 in a delta configuration. In
fact it is done with 2 transformers.

The base leg in the delta has a center tap which is the
neutral and is ground here in the US.

Yes, I have one of these clocks also. The thing is, these clocks
are set 6 times in a 24hr perod by the WWVB signal. The rest of the
time the time base is an ordinary crystal. I want my clock to be
set on a more continous basis. This could only happen with the
continous decoding of the signal. This is how the "professional"
clocks, such as those made by Spectracom work.

You might consider the old Heathkit clock, which still turns up cheaply
at hamfests now and then.

If you build your own, make sure you use nixie tubes. That's important.

FS Nice Drake TR5 Transceiver and matching Drake PS-75 Power Supply.
This is very clean gear. It does works,
but needs an alignment. Receiver sensitivity is low. Calibration is good
and the digital readout is bright and clear. Everything works. I have made
several contacts and get good audio reports. It puts out around 90 watts, a
little more or a little less depending on band. The rig includes the
original manual and all cables. Price is $575 plus shipping. Digital
pictures available. Thanks, Charlie Hugg, K5MBX

OK, let me try again and see if Google will keep my reply this time.

240 volt motors often burn out when trying to run on 208 volts. Been
there, seen that (so that means anyone telling me it doesn't happen,
which a couple people have, only means they weren't there). Those are
single phase motors and where there is single phase it is usually
assumed to be 240 volts.

Water takes longer to boil because the stove element is only
dissipating 75% of the wattage. If the level of heat needed under
thermostatic control leaves the element off for some time, you should
get nearly equivalent out of 208 volts, though with some slight,
probably negligible, increase in loss in other wiring. But at "full
tilt" heating, 208 volts is definitely wimpy.

The problem is with single phase a common standard in the US, appliances and equipment is made for single phase, and made for the voltages available.

Yes, it likely is their policy for that reason. And the state
regulators simply accept it. The point I'm making is that they do
charge more contrary to what the parent post of the one I made said.

One advantage you have in Europe is that with 3 phase being common,
and even where a home is only wired with 2 legs of it, you get 230
volts between hot and ground, and 400 volts between hot and hot (as
opposed to 460 if the phases were 180 degrees). This means your high
power appliances (like an electric sauna in Finland) would be designed
for 400 volts, not for 460 volts. So whether you had 2 hot legs of
power, or all 3, you could operate it as designed.

A 208 volt to 240/120 volt center tap transformer could accomplish the mission. Use 3 of them with enough loads to balance it out, if needed. Or take power from 480Y/277 (we have that in the US) and use 3 transformers that do 480 -> 240/120 and run everything on single phase (3 separations to keep things in balance).

Observatories often use a GPS to feed their computers accurate time. That may be a solution worth looking into.

In sci.engr.electrical.compliance Bill Vajk <bill9north@hotmailditchthis.com> wrote:
| Tomi Holger Engdahl wrote:
|
|> If you want three phase power and genuine 240 volts,
|> this sounds like quite problems or complicated solution to me..
|
| Actually it is not a problem at all to provide 3 phase 240
| combined with single phase 120 in a delta configuration. In
| fact it is done with 2 transformers.
|
| The base leg in the delta has a center tap which is the
| neutral and is ground here in the US.

However if all of your load is 120 volt and 240 volt (needing neutral) loads, as is the case with domestic/home appliances (because in the US, single phase power is expected), then 240 volt three phase delta is a waste because you'd be putting all of the load on that one winding.

This is one of the reasons where three phase power is delivered, it is usually configured as 208Y/120. Only if you have substantial three phase load does 240 delta with a center tap make any sense. And every transformer I've seen for that configuration limits the loading on that center tap to 5% of the overall transformer rating.

It basically comes down to the fact that because both 240 and 120 are common in homes because of single phase, that appliances are made for those voltages, which makes the use of three phase power problematic with them. One solution would be a transformer configuration where 3 cores are wound with secondaries for 240/120, and all 3 neutrals are bonded together, forming a 6 point star configuration. Then these three 240/120 outputs would be run through 3 separate two pole breaker panels. But you are not likely to get the power company to deliver power to you this way (they would need 7 wire metering, for example). Still, for customers with large loads (cutoff somewhere between 100 kVA and 300 kVA) power companies insist on 3 phase power.

Europe apparently does not have this problem because 460/230 center tapped never really happened. They either got 230 volts on one wire, or got 2 or 3 wires of 230 volts from 3 phase, giving them 400 volts between (plus or minus 5% depending on country).

I have the following items for sale that are excess to my needs. Prices
do not include shipping. I will ship overseas.

Solar Capacitor Exam-eter Capacitor Checker.......$75 plus shipping
This is a multi-function Capacitor tester which tests capacitance,
resistance, power factor, leakage, and insulation resistance. Also has
an ac/dc VTVM built-in. This is a working unit in nice condition.
Includes a copy of the manual.
http://members.cox.net/radiostuff9/exameter.jpg
http://members.cox.net/radiostuff9/exameter2.jpg

Weston Electric Vintage AC Voltmeter and AC Ammeter.........$40 plus
shipping
These are neat bakelite meters that must be 50-60 years old. Voltmeter
covers 0-300 Volts in two ranges through two separate binding post
connections. Ammeter covers 0-20 amps in two ranges.
http://members.cox.net/radiostuff9/ac_meters.jpg
http://members.cox.net/radiostuff9/ac_meters2.jpg
http://members.cox.net/radiostuff9/ac_meters3.jpg

Precision Apparatus Series 85 VOM.........$30 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Triplett 630-PL VOM.................$25 plus shipping
Nice working VOM. Needs new battery for highest resistance scale-all
other ranges are OK
http://members.cox.net/radiostuff9/triplett2.jpg

Knight Amplifier...........$40 plus shipping
Knight Kit amplifier from Allied Radio. No model number on the unit. I
believe this unit is from the
late 1950's or early 1960's. I have checked it out and it works. I had a
matching tuner for this a year
ago and it too did not have a model number.
http://members.cox.net/radiostuff9/knight_amp.jpg
http://members.cox.net/radiostuff9/knight_amp2.jpg

RCA Advanced Voltohmyst VTVM.............$35 plus shipping
Older RCA VTVM in working condition with probes. Case has been
repainted.
http://members.cox.net/radiostuff9/rca_voltohmyst.jpg
http://members.cox.net/radiostuff9/rca_voltohmyst2.jpg

Weston Antique Milliameter.....$30 plus shipping
This is a neat antique meter. Working in very good condition. Measures
15, 75 and 300 mA through
seperate binding post connections.
http://members.cox.net/radiostuff9/weston_meter.jpg
http://members.cox.net/radiostuff9/weston_meter2.jpg

Book - "The Portable Radio in American Life" .....$25 plus shipping

This is a 260 page book published in 1991 covers the
history of portable tube radios and transistor radios from the 1920's to

the 1970's. Includes historical information on Sony, Zenith radio,
Admiral radio and many other brands who built portable radios. This is
an excellent reference book if you collect portable and transistor
radios. These are new books. This is a great radio reference book. I
have 1 of these books left.
http://members.cox.net/radiostuff9/portableradiobook.jpg

Set of crystals for the Navy TDQ transmitter...$60 plus shipping
Their are 24 crystals of which 23 ( a few duplicates) are the original
Navy crystals; one crystal is not.
The wooden box is in great shape also. Here are the frequencies all in
MHz: 5.80,12.90,13.10,
13.26, 13.50, 13.74,13.75,
13.82, 14.02, 14.02, 14.30, 15.62 ,15.64, 15.66, 15.68,15.78,15.84,
15.85, 15.86,15.86,15.86,15.92,15.92, 16.00, 16.24

(snip)

Yes. one should not expect to get more than 75% of rated horsepower
from a motor rated for 240 volts but run on 208. If you load it at
100% or rated output, it will slip excessively and generate lots of

heat.

You'll find that most of the schematics on the net for atomic clocks are
of the crystal variety-they set once or twice a day with WWVB and the
rest of the time use a crystal. You'll have to do some digging to come
up with something that does continuous decoding, but I'm sure it's out
there.

OK, if you are running a 240 volt motor and really need the
maximum torque on stratup there's always the "buck&boost"
transformer setup. It is the addition of a couple of 208/24
volt transfromers connected into the circuit.

See above. Do note that 208 volt commercial equipment is available
though possibly not for everything.

> The problem is with single phase a common standard in the US,
> appliances and equipment is made for single phase, and made for the

You want balls in a distribution system go for 480/277. LOL
There's no problem in the US getting 277 volt lighting
fixtures.

A well driller I knew liked 480 volts for some of his single
phase deep wells. I got him to think about another standard,
voltage, that is 575. The nice thing is you can reduce wire
size compared to 480 and still use 600V rated wire.

# 1554. FS Icom 735 HF

Newsgroup: rec.radio.amateur.equipment

Source record: 22856

I have a nice Icom 735 for sale. It is clean, I have the manual, and the original box. It puts out full power and,
yes, the little door in the front is there.
The only thing I can find wrong with it is, that those little
push buttons on the left (SSB CW AM, FM) need cleaning. Once in a while, it will quit transmitting, and you
have to turn it off and back on. I am sure it is dirty contacts inside the rig. I would NOT want anyone to buy
it without knowing about this minor problem. If someone
wants a nice, reasonable 'spare' rig, or someone just starting out, I will take $300 for it (most go for about $350-$375). I just bought another IC706 for the base
station. If if it doesn't sell, well, it will remain a spare rig.
It IS a nice rig.

Tnx es 73

Hello, I'm new at the HAM radio thing, but I just put me up my antennas and I have a power supply out of a old pop up camper that was only putting out 12.3 volts, with no load out of it, I can receive signals very clear, but cannot transmit signals, my strength meter goes full scale, but no one can hear me, and I know that a few friends should have been able to hear me. My question is if I have a power supply that is not putting enough voltage will that effect my radio where I cannot transmit, my friends say all they get on the other end is a buzz noise, and I notice that the lights on my display go dim when I transmit. Thanks in advance.

What I did is use a GPS-disciplined receiver to give me a highly accurate 10 MHz standard. The receiver costs $250 from www.buylegacy.com but you'll end up paying (way too much) for a power supply/line lump and the antenna. I also spent money on software to use with it on my win2k box.

Every 10 minutes that software updates a web page with the sky view and how the high-grade crystal oven is functioning, including estimated error over 24 hours if it loses contact with the GPS satellites.

| OK, if you are running a 240 volt motor and really need the
| maximum torque on stratup there's always the "buck&boost"
| transformer setup. It is the addition of a couple of 208/24
| volt transfromers connected into the circuit.

If the load needs a neutral, you'd need 2 buck/boost transformers wired
to boost the 120 volts to about 139 volts (maybe 132 is close enough).
If the load does not need a neutral, then a single transformers could
do the job (the primary or main winding connected hot to hot). You'd
get 229 volts with a 10% step up. If you could find a buck/boost with
an 15% secondary/end, you could get very close at 239 volts.

|

| You want balls in a distribution system go for 480/277. LOL
| There's no problem in the US getting 277 volt lighting
| fixtures.

These are commercial/industrial fixtures. If you have 480/277, it limits your choice on residential and consumer stuff. But of course you now have access to a great selection of massive horsepower motors.

| A well driller I knew liked 480 volts for some of his single
| phase deep wells. I got him to think about another standard,
| voltage, that is 575. The nice thing is you can reduce wire
| size compared to 480 and still use 600V rated wire.

Why not the full 600 volts? And why not the full 3 phase (e.g. 600 delta)?

I understand the standard voltage they used to use in coal mines was 577 volts hot to ground, for a nice round 1000 volts hot to hot. But I believe they ran that on 25 Hz. Some of those mine shafts get very long and that can mean a lot of voltage drop.

Here ( In Iowa ) the PUC regulates the price/costs of service and the 3
phase is a commercial service level. So they charge me a different rate than
the residential rate for my house/shop feed 480/277. The first 400 or so KW
is a about $0.11 then over that $0.08 per KW and I have a KVA charge based
on the transformers they used ( about the cost of the first 435 KW ) and
it's a use it or loose it deal if I use the 435 KW the it's a good deal if
I don't run that much I get charged it as a minimum charge + the $23 per
month for the 3 phase service. Also if I pull more than 75KVA in any 15 min
period ( in the peak heating/cooling months ) they really stick it to me, a
base KVA charge of $13.00 per KVA for that whole month!!

Did you read the manual for the radio?

I would guess you would want 8-10 amps.

For three phase, two buck&boost transformers is enough. The
third leg becomes a "phantom" combined out of the other two.

<< My
question is if I have a power supply that is not putting enough voltage will
that effect my radio where I cannot transmit, my friends say all they get on
the other end is a buzz noise, and I notice that the lights on my display go
dim when I transmit. >>

Dustin, this should have been covered in the theory which you studied for your exam. The radio requires a certain voltage (most likely 12.9 to 13.5 VDC) and CURRENT. If you have a radio which is supposed to output 25 watts, an easy rule of thumb is to triple the amount of watts (75) and divide it with the input voltage. For example, the old RatShak I used mobile for some years was 25W out..divide 75 with 13.5 VDC gives me approx. 5.5 amps needed for xmit. Now, as the rest of the circuitry, lamps, etc draw some current, lets round it up to 6 amps. The supply would have to output around 6 amps with no "sag" in voltage to properly run the rig and give some leeway.

This is very simplistic...and only a quick "SWAG" method of looking at current requirements. Your manual should give exact specs on your rig.

I'd bet (esp. with the "buzzing noise"....60 cycle noise due to poor regulation in the power supply) that the P/S is either too low wattage, in need of new filter caps, or both.

To get on the air, try a 10 to 17 aH 12V GelCell and use the P/S to charge the battery. The GelCell will output enough current to run the rig, and the "power supply" can charge it. Don't leave it connected all the time to the power supply, though. Overcharging can damage the battery. A better solution is to either rebuild the power supply (if the transformer can output enough current to run the rig) or buy a commercial unit, such as an Astron RS20. WATCH OUT FOR POLARITY!!! It is painful to watch smoke come out of your radio.....

I think you have a chance to get some "hands-on" time here, and maybe even build your own power supply! It is fun, and then you have the right to say that you're using something you built with your own hands....very satisfying, at least to me. Today, so few folks can say that they even know what goes on inside the "boxes" they own.....personally, I enjoy tinkering. Lots cheaper than therapy, and I get new toys when I do it right......!

Cheers;
A

From what you described earlier, the PS you are using does not put out
enough current.

As above, a 10A PS at minimum, and I would suggest you get a 15 or
even 20 to have a comfortable margin, longer life, and fewer problems.

A 15 A PS will take care of any 50W output on the market.

Happy trails,

Hi,

I'm looking for user and service manuals for these 2 equipments:

Philips PM5131 0.1Hz-2MHz Function Generator, and

Philips PM5326 ...-125MHz RF Generator.

Any help (by mail, email, bird, etc...) whould be very much appreciated.
Mail expenses on me, of course, if that is the case.

Thank you.

73, Artur

OK, but the message in question (10 March) is about single-phase:

QUOTE
Those are
> single phase motors and where there is single phase it is usually
> assumed to be 240 volts.

OK, if you are running a 240 volt motor and really need the
maximum torque on stratup there's always the "buck&boost"
transformer setup. It is the addition of a couple of 208/24
volt transfromers connected into the circuit.

577 V allows for a 4% increase while still keeping to the 600 V cable
rating (just). Maybe that's the explanation.

I'm not familiar with the rig that is being discussed to go into much detail nor am I going to disagree with your suggestions as they may be on target as well, however... the buzzing sound could also be caused by the Antenna being too close to the PS or the RF getting into the Power Supply, regardless how well regulated it may be. The loop that is formed, will create a buzzing. Been there done that! I helped out another fella not too awfully long ago with the same problem in one of these radio groups. CL

| OK, but the message in question (10 March) is about single-phase:

It's about a single phase load connected to 2 legs of three phase, which is
where it gets 208 volts instead of 240 volts. If you need a neutral at
the load, one transformer won't do it unless it has a center tap, and a
buck/boost transformer is an autotransformer that doesn't have it.

In many places, they get 208/120 volts via 2 legs of 3 phase. It's not
really single phase. The 208 volt phase angle is 30 degrees off from
the 2 120 volt phase angles, which are 120 degrees from each other. This
is why it only has 208 volts instead of 240 (as it would get with 180
degrees).

|> Why not the full 600 volts? And why not the full 3 phase (e.g. 600 delta)?
|
| Because 577 has (sorry for the typo) been an established standard
| (I don't understand the rationale for it) for some long time.

And 550 and 575 were standards for the category of service now running at
600 volts (e.g. 5x of 110, 115, or 120). It's common in Canada and I have
seen it in the US.

|> I understand the standard voltage they used to use in coal mines was 577
|> volts hot to ground, for a nice round 1000 volts hot to hot. But I believe
|> they ran that on 25 Hz. Some of those mine shafts get very long and that
|> can mean a lot of voltage drop.
|
| 25 Hz was a standard used in early electric traction motors. In fact,
| the old Pennsylvania Railroad electrified their New York to Washington
| and Harrisburgh lines using it. After they, and the successor Penn-
| Central Railroad failed and the locomotives and power distribution
| substations were retired (because of PCP content) the rebuild was
| done at 60Hz so that standard commercial power could be used as
| opposed to the earlier dedicated 25 Hz generation the railway had
| to operate itself. Sadly they removed the catenary and power
| distribution system from the Harrisburgh line though the stancheons
| remain (at least near Philadelphia.)

I've heard of some that ran on 16.667 Hz.

| 577 V allows for a 4% increase while still keeping to the 600 V cable
| rating (just). Maybe that's the explanation.

That's 4% over 550? He was referring to using 575 in place of 480. Then I
suggested 600 as used in many places in Canada.

You can with the right conditions, such as NOT using the standard screw in
base. Use a mogul base instead. Above 277 and the requirements get even
more strict (height access limits, etc).

|
| Well I bought 480 power from the local utility for a dwelling
| in the Catskills circa 1981. Yes, a dry transformer in the
| residence provided the necessary 120/240.

If you have a long service drop, you kinda need that to lessen the voltage
drop. Much longer and you'll have to put up a pole and a transformer there
running from primary voltage (2400 and up).

In sci.engr.electrical.compliance William <wac@_nospam_gene-o-tech.com> wrote:

| Here ( In Iowa ) the PUC regulates the price/costs of service and the 3
| phase is a commercial service level. So they charge me a different rate than
| the residential rate for my house/shop feed 480/277. The first 400 or so KW
| is a about $0.11 then over that $0.08 per KW and I have a KVA charge based
| on the transformers they used ( about the cost of the first 435 KW ) and
| it's a use it or loose it deal if I use the 435 KW the it's a good deal if
| I don't run that much I get charged it as a minimum charge + the $23 per
| month for the 3 phase service. Also if I pull more than 75KVA in any 15 min
| period ( in the peak heating/cooling months ) they really stick it to me, a
| base KVA charge of $13.00 per KVA for that whole month!!

Demand metering.

That needs to be regulated better. But older meters just couldn't measure
it the way it should be measured, which is to charge you for actual usage
over a certain level, when over that level. Today, digital meters could do
it minute by minute. Of course there is reason to want to limit people
pulling 1 kVA one minute, and 75 kVA the next. Ideally, rates should be
programmed based on current system demand vs. current customer demand each
designated period of time (like 15 minute periods). It would be combined
demand metering and peak period metering.

Too bad most PUC's are run by POCO's.

500MCM wires in buried PVC conduit. Someone had been adamant about not
having a power pole in the yard, and everyone, including the utility,
compromised.

The main source of Eddystone spares (and service manuals) in the UK is:

Dave Simmons,
Windana House,
North Aston,
Bicester,
Oxon, OX25 6HX.
Phone/fax: UK: 01869 347 504

There is an Eddystone User Group (of which I'm a member), which publishes an
excellent bi monthly newsletter of more than 40 A4 pages of technical info
and advice, nostalgia, ads, etc.
The Secretary of the Group is Graeme Wormald, G3GGL, who can be contacted
at: G3GGL@euophony.net

Hope that helps.

This 277/480 is usually used with flourescent lights anyway, don't need
starters at that voltage.

Single phase motors are less efficient and require some sort of phase lag circuitry (shaded poles or whatever) to produce a rotating magnetic field for staring torque.

Two phases require three conductors. Three phases require three conductors. More phases, more conductors (and greater expense) for minimal additional advantages.

Three phase motors also have constant torque. There are no moments of zero
torque like there are with single phase motors.

In addition to the technical advantages of 3 phase (partly indicated by
Paul) the major advantage is $$$$.
This was established inTesla's days and still holds true. More bang for the
buck.

Hi,

Can someone tell me if you already heard complaints about interference in HF or V/UHF transceiver caused by Wi-Fi and other GSM or talky-walkies (new generation, including the new GSMs) or from chips and UHF antennas associated to posters for example (e.g. capable to download a song on a GSM), using remote connexions capabilities ?

Or if there are on the web some information about their potential "side effects" on ham bands ?

Thanks in advance

If I remember correctly this (power supply) was salvaged from a mobil home. If so it was probably a float charger for storage batteries and has neither filter caps or regulating circuit.
I hope the radio still works when you get it on some clean DC power.
good luck
Don

I'll bet you a dollar he can.

It may be illegal; it may violate electrical and/or building codes,
but there's no law of physics that will stop him.

Whether he _should_ is a totally different matter.

Now why would that be? I can buy fixtures and incandescent
bulbs at 277 volts. 277 volt rated switches are easy
enough to find.

If you're referring to codes, that's another issue (you can
but you may not.)

I don't see much difference between the 240 volt circuits used
as a matter of routine in Europe (and other places) compared to
277 volts.

I already found a "problem".
The LPD transceiver, free of license, work with a first 1F stage at 21.150 MHz, just in the 15m band, digimode segment...
This potential source of RFI as these transCV can emit up to 2 km in open space.

And just what voltage level is safe for light fixtures in a dwelling? From
what I see, the Europeans have found around 230 volts to be safe.

Of course another issue is actually getting the power company to provide the
480 volts. That can, but getting them to do so is another matter. Some will
more readily than others.

|
| Whether he _should_ is a totally different matter.

The real question is whether it is safe. It seems 230 volts is safe in
Europe. But 277 is a bit more than 230. Is the "unsafe boundary" right
between there? Or is the safety issue more about 120 volt light bulbs
being more common here, someone might make the mistake of screwing one
into a bulb socket running 230 or 277 volts (or maybe even 480 or 600).
Had the US always had 240 volts hot-to-ground then things might be quite
different today. OTOH, if we had distinctive sockets for each voltage
level that disallowed something of a lower voltage level to be plugged
in to them, then it could be safe. As I have read NEC, 277 volt light
fixtures could be allowed under some circumstances, such as to a mogul
screw-in base.

15.47% more.

The issue is probably more a case of Americans have 120 volt light bulbs
that they might inadvertently screw into the wrong fixture whereas in
Europe, such light bulbs are generally not found.

Which means that a lamp rated for 100W at 240VAC (RMS) would run at
about 130W at 277V, with correspondingly higher color temperature and
reduced lifetime. <POP>!

OK your right, "you" can run them in your dwelling, however "I" have to
pass an inspection before I can move into my dwelling unit, so unless "I"
don't want to live there "I" have to conform. So in this case the laws of
Johnston county do supercede the laws of physics :-)

Hi,

To complete a long history of amateur radio I 'ld like some confirmations.

I read or heard that GSM are used today by some radio amateurs.
I think that the CEO of Nokia for example (can someone recall us his name or callsign) steers his antenna farm remotely through a GSM card installed in his portable computer, nothing less !
I think also that ARRM published in 2002 or 2003 somethink about a similar application in a few lines.

Something else to confirm, some Nokia GSM of the end '90s are equipped with a sound signal that ring in using the letter V emitted in Morse code, conditioning by a strong passion, Hi !.

Thanks in advance.

you might have not see this reply as I trimed the groups last night from my
reply

>> You can with the right conditions, such as NOT using the standard screw
in
>> base. Use a mogul base instead. Above 277 and the requirements get even
>> more strict (height access limits, etc).
>>

>No, you can not in the US anyway, NEC (2002) 210.6 part A sub 1 puts
>Occupancy limitations on dewlling units, for voltages over 120 on
>Luminaries.

I guess I should amend that statement to read you SHOULD not, rather than you CAN not :-)

Back to the safety issue, from what I can gather ( and it may be wrong:-). The safety level seems to be based on the ability, once started, to have a self sustaining arc and 277 volts may be approaching that level >300 volts ?? BTW my line to ground voltages average about 288-290 volts, so I guess it's getting rather close to the 300 volt level

Indeed. About 100 hours for a 1000 hour lamp, on an optimistic estimate.
A short life, and a bright, merry one.

'My candle burns at both ends;

[It should be 'burneth', to scan, but it was in a far country, and
besides, the wench is dead.]

It will not last the night;
But ah, my foes, and oh, my friends -
It gives a lovely light.'

I wonder if a 'mogul' base is the same as what I know as 'Goliath Edison
screw' (GES) - a screw-in base larger than the normal 'Edison screw'
(ES) base, used far more in Continental Europe than in Britain, where
most lamps have bayonet bases. In Britain, AFAIK, GES base is used only
for lamps over 1 kW.

"open", there is white noise out of the speaker, but the Green "Receive
Light"
does not come on. When the PTT is pushed the Red "Transmit: light does not
come on, but the bar graph indicates power output. No signals are heard
by the
receiver when the PTT is released or in it's idle state.

The displayed frequency on the screen looks ok, if a repeater is set,
then the
display changes to the Transmit frequency when the PTT is activated.
also the knob on top dose not work ,(that i can tell)
i have done a reset on it, no help

Thanks to all who will help with this problem.

# 1620. FS Rare Signal/One CX-11A HF Transceiver

Newsgroup: rec.radio.amateur.equipment

Source record: 22722

I have for sale a very nice Signal/One CX-11A HF Transceiver. This CX-11A is one of the last ones made by Signal/One. They only made 112 of these beauties. This transceiver is in great condition cosmetically and it works well too. It has the rare 200 watt option and the optional Fan/Blower kit. It has been gone through by Paul Kollar in 1999. For pictures and more details see may webpage below and click on the For Sale/ CX-11A Sign. Thanks, Charlie Hugg. K5MBX

# 1621. superheterodyne in the future ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-11 22:01:26 UTC
From: Thierry <"To answer me in private use http">
Message-ID: <4050e1b9_1@news.vo.lu>
Source record: 22723

Hi,

For over 85 years now (Armstrong, 1918) the superheterodyne circuit is at the base of all transceiver without exception I believe.
That is was built in 1920 or in 2004 the "superhet" is always there, excepting that today instead of using a single IF there 3 of them and some additional amplifications and filtering stages.

But, among the "most" expert engineers of you, is there a way or does it already exist somewhere some experiments to create a new model of transceiver using another technology ?

A question I 'd like an answer to try to define the future of amateur radio for my history of amateur radio...
http://www.astrosurf.com/lombry/qsl-ham-history.htm

Thanks in advance

Thierry, ON4SKY

Your belief would be wrong, I think.

Superhets are certainly popular. However, there has been a very significant increase in interest in direct-conversion transmitters and receivers over the past few years, and a lot of such designs are now being put into commercial use.

Most of the ones I've seen mentioned (in the commercial world at least) are going into UHF and microwave systems - cellphones, 802.11 data radios of various sorts, and so forth.

>But, among the "most" expert engineers of you, is there a way or does it
>already exist somewhere some experiments to create a new model of
>transceiver using another technology ?

Direct conversion (as noted above) is one variety. A lot of the simpler QRP CW radios use direct conversion... hams have been building tin-can-sized-or-smaller CW transceivers for years.

I've seen some interesting designs which handle sideband, by combining direct-conversion RF front ends with phasing circuitry - an approach used a fair bit back in the 1960s, recently revitalized by the availability of affordable high-crunchpower DSP chips which can implement the phasing method via digital techniques. Some HF radio systems even work by sampling the RF directly, and doing pretty much everything in the DSP... all of the fine tuning, and the various modulations and demodulations are done digitally.

Same thing as a resonant LC circuit. There's a great physics book
from the 1940's called, "Dimensional Analogies" or somesuch. U
of Colorado Littleton has it in the reference section.

Another great source of accurate yet highly readable tutorial material
is QST magazines from the WWII era, when transmitting was suspended.
Lots of geometric & physical explanations of electrical phenomena.
I think they're being peddled as CD'd archives nowadays?

Mine is set only once per day, sometime between midnight and 4 am.

I was under the impression that the reason this was done is that the signal is too weak to be decoded during other times of the day. In fact, I have some (admittedly very inexpensive) atomic clocks that have *never* decoded the signal here in Florida.

Hi Dave,

I am agree with your ideas about cellphones (PTT feature) and other Wi-Fi.
I speak about these technologies on my site as well as all developments in DivX and other DVD technologies associated to Internet and cable TV, and more. They are a lot of new technologies in these areas that will concern the ham community too.
All the story at http://www.astrosurf.com/lombry/qsl-ham-history.htm (page 16 for the future)

But I wanted first some info about new HF transceivers, not the direct conversion that ARRL discusses from time to time. I do not really see my FT1000 MarkV be converted in a can... Hi !

I speak also about DSP in various pages of my site, and seeing in which (excellent) way it is used in the latest HF RTX, I think that you have highlighted the sensitive point where the future high-end RTX can still be improved and surprise us.
I should be interested in seeing the new Yaesu high end HF RTX (but nothing heard about it). The Mark V is an old system now (10 years or even more including the blueprints), even if it is still one of the best in its category. Consequently the new one should be soon released... Maybe an hybrid between the new Tec-Tec Orion and a true DSP system... Rest to insert some optical circuits and it will be updated... To follow.

Any info is always welcome about the trends of future HF RTX.

Hi,

That looks fine, all the more that DSP are today included even in the low- and mid-ranges RX.
But IMHO we can go still further, on both interfacing and VLSI.

I wonder for example if optical circuits could not replace some old fashion printed circuits of RTX too. Many computers and telecom companies (Microsoft, IBM, AT&T, etc) work on optical systems today. That could speed the system, keep it colder, it is free of RFI and that should be also a good support to any connexion with Internet and other telecommunication tools.

A modern RTX could in fact include many external ports, including USB, LAN card, Flash memory interface, Push-to-Talk GSM, as well as DivX drivers to easy interface the RTX with any tool of assistance (computer, Internet, digital TV, video, and more) so that we can work it in all possible mode of traffic.
At the price of new computers (you have a 4 GHz PC with all possible ports for less than 700 euros now, 2004), such upgrade should not really cost much. Thanks to the VLSI you can even built-in all these devices in a single interface card.

But personally I am unable to foresee to what could look like the future "Mark 5++".

Dennis,

I don't know what you mean by ordinary crystal, but even.001% is not very good. You may want to look at high accuracy temperature compensated oscillators. Depending on where you live, you may actually be able to phase lock your oscillator to the WWB carrier. You would have to use a phase detector that does not pull you off to one side if you lose the signal. Also, the ~3.58MHz color subcarrier on some TV stations is locked to a cesium standard.

And the US Dept. of Defense is sponsoring research into _direct_ DC-
to-daylight receivers that sample the RF directly and do everything
digitally. This should prove _very_ interesting indeed, as the number
of signals handled by the receiver -- and what is done with them --
is pretty much limited only by the speed of the computers processing
the signals.

Now _there_'s some equipment I want to be able to buy -- preferably at
surplus prices, of course.

Until the house is sold.

But for luminairse (lighting fixtures) made specifically for a higher voltage
with a special socket only for that voltage, then I don't see why not allowing
240 or 277 volts or more.

| The safety level seems to be based on the ability, once started, to have a
| self sustaining arc and 277 volts may be approaching that level >300 volts
| ?? BTW my line to ground voltages average about 288-290 volts, so I guess
| it's getting rather close to the 300 volt level

That's going to depend on the distances in the filament. I used to "blow"
light bulbs with 240 volts long ago as a kid. None ever exploded or had a
sustained arc. Some blew immediately with a pop. Some burned a while and
then just went out. I remember one that never did burn out in the time we
allowed for it (which was about 8 hours).

Now imagine wiring up 104 light bulbs of the 120 volt variety in series and
running them on 12470 volts (in a well isolated wiring scheme). All should
look fine until one of them burns out (with 104 bulbs, one is likely to burn
out soon). Guess what the potential will be across the opened filament.
Well, you wouldn't need to guess.

I was wondering about those 2.5 volt bulbs on Christmas light strings run at
120 volts.

The CEO of NOKIA is Mr. Jorma Ollila. He is not a radio amateur.
Martti, OH2BH is emloyed by NOKIA, he has a remote control system via phone
lines.

73, OH2QM

Kenwood TM-V7A Complete with programming cable,
Software, and remote mount.
$280

Standard C468A 95% $100
Includes 1 CWC150A Wall wart

PacComm Sprint-2 TNC Like new,
With AD-4 Analog-to-Digital board
With cable for Kenwood TM451A $100 obo

Icom 02AT with BC-35, stock battery and wall wart.
And extra Ice brick battery $ 75

Maha MH-C777 Universal Charger-Conditioner LNIB $ 30

Dynamic Communications
Model A470-25 $ 20
Sold as is, no manual.

Model 10-0 $ 20
Sold as is, no manual.

Carver Audio Amp 95+%
Model M-2120
With Manual. $ 75

All Items Will include manuals, and any docs that I Have.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
cart. I also have a NIB IDE raid controller with 2 carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Much peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
AND a lot of cartidges, and software - games to productivity.
Included is all manuals, plus extra books for programming ect.
Included is software to run a bbs from the C64..
I would like to sell it all as one group. Will cost more,
if sold piecmeal....

Shipping is NOT included

# 1639. ICOM 7400 (746PRO) TX DISABLE for SWL use.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-12 20:16:38 UTC
From: Marco <ccmarco@tiscalinet.it>
Message-ID: <GUo4c.44825$O31.1914933@news4.tin.it>
Source record: 22741

I am wondering if there is a way to comlpete disable transmit functions on a
IC 7400 for SWL use with random wire antennas shared with other receiver.
I have already lowered the RF POWER to minimum, i have attacched a dummy
load to VHF connector, i have attached a wire antenna with impedance
tansformer (16:1) on ANT1 connector and obviously no Mike connection.
I have to be sure that radio does not go in TX with TRANSMIT button and / or
antenna tuning function.

There is some setting trick or hardware mod to obtain TX complete disable ?

Thanks !

# 1640. Johnson Valiant II for trade

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-12 21:02:30 UTC

Source record: 22742

I have a Johnson Valiant that needs a low voltage transformer. I need a good receiver for my AM station. I also have a Icom R 71 receiver that I will throw in too it has real weak receive and I think that a diode crapped out before the ATT RF amp and straight through circuit. This is for pick up only because it would just be to coastly to ship.I will travel 75 miles away from Athens GA. I have the manauls for both units. I also have a HQ 110 that needs C 73 and a Halicrafters S-85 receiver that is a nice working SW receiver but has no s meter and isn't worth a darn for ham radio. I also have a realistic 1000 channel pro 2052 trunk tracking scanner. I also have a TR 7850 2 mtr moblie that used for a packet station. It needs a mic. Maybe we can work something out. 73 and thanks for reading

# 1641. F.S. EICO 667 Tube Tester

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-12 22:31:11 UTC

Source record: 22743

Hello all,
Ecio 667 dynamic conductance tube tester.
This is a rugged high quailty tube tester [about 20 lbs] factory wired
insturment is for checkingout guitar amps,hi-fi gear,etc.this tester combines a
mutual conductance test with peak emission test to give a single reading of
tube quality. test almost every domestic or foreign tube including
nuvistors,novars,compactrons,miniatures,sub-miniatures,octals ans loctals.
older 4,5,6 pin and septal based tubes can be tested with the optional ecio
model#615 adapter [not included] has a large easy to read meter 4 1/2". the
tube roll chart does work but missing the manual and a black knob on one of
the levers. one just sold on ebay last week for over $200.00.

$125.00 plus shipping in the US

thanks,Garry

Gerry and others,
Yes I have went thru 2 of those dam things already. A big white one
with normal minute and hour hands which I threw away after a few weeks
of trying to make it behafe. Then got the more or less square shaped
one with wooden panels on eachside of the clock face. Shows
day date weekday (seconds or indoor temp) Outdoor temp. Has an ICON
top center thats supposed to show up black if WWV is being heard.
Mine rarely does unless take it upstairs and point it north/south.
Then the icon (wwv) shows very dimly. Mine is supposed to access
the WWV sig during hours from midnight to 6am only. But still the
ICON rarely shows up. I hear the people who sell them are very
helpful and will even replace your clock if you cant resolve the
problems. Their ph nr is 1 (800) 972-0292 and ask for Shelly.

Only if high speed ADCs become cheaper and have less problems with
internally generated spurious signals. Then the only other problem becomes
enough memory to process in near real time the data being generated by
signal from DC to Daylight.

Forget about getting an atomic clock to set in Hawaii. The signal is
simply too weak. Atomic Time (who I bought my dual time clock from) says
that it helps if you point the antenna (apparently they just use ferrite
rod antennas-just like in a cheap transistor radio-to recieve) towards
Fort Collins, which is due east of my QTH.

Yes, that's the impression I got too. Somewhere on the net I saw a
diagram of WWVB's coverage area-it covers all of North America at night
and just a little area of the Rockies during the day.

Are you sure your not talking about wwvb, and not wwv. Or in
your case it would be wwvh.

Hello, I was thinking of buying a Yaesu VX-5R handheld, but finances are kinda tight and I was thinking of a VX-150, I pretty much am just going to be transmitting on the 2 meter band. What do you guys think of the VX-150? I know the 5R is a better Radio, but would you waste your money with a VX-150 or would you just wait? Thanks.

# 1648. Re: superheterodyne in the future ?

Don't worry. It will be here. Ultimately AM, SSB, FM and Morse will fall into disuse and all communication will be via wideband, frequency-hopping digital transmissions.

China is now wide awake. 15% increase in GNP per annum. Band plans - phooey!

It is a very nice rig. I have been very happy with mine, using it for
hiking and for PS events. I know a number of people who have one for
similar uses.

Seems to have a clear signal, in and out, and it will put out the full
5 watts even with the alkaline battery pack (not true of every model).

Not that I abuse it, but it does seem quite capable of dealing with
harsh uses.

Two thoughts, though:

As with most HTs, a upgrade aftermarket antenna will do better than
the stock rubber duck. I use a flexible 1/4 wave on an SMA-BNC
adaptor.

With 200 memories, I would question the sanity of anyone who tries to
program them via the keypad. Get the software and cable (I would
recommend the RT Systems over the Yeasu version).

The only improvement I would ask for is if they made a dual band one.

Happy trails,
Gary (net.yogi.bear)

# 1657. Newbie- test equiptment for am receivers ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-13 15:06:14 UTC
From: cmarley01@attbi.com
Message-ID: <e8262c61.0403130706.2cf75793@posting.google.com>

What inexpensive test equiptment can I use to
troubleshoot and repair old am ( broadcastband)transistor radios?
I have seen a Velleman Signal generator kit $11, output 1Khz fixed,
0-100mVrms, and CKIT has a signal injector kit$6 and an Audio signal
tracer kit$8.I have only a digital voltage meter and a homemade audio
output level indicator. My experience is limited to building a few
kits etc.
Your help will be really appreciated.

The latst ARRL newsletter (info. also on their Web site) says they had ab opportunity to get their hands on a pre-release one. Price still to be announced, but "under $11,000" (!!!). Now that may be "list price," with the streat price considerably less, but that's still going to be one expensive rig. It'll probably make the Ten-Tec Orion ($3000+) seem like a bargain.

My guess and only a guess is that if they want to sell these the price
will be $5995, still too much for me but it would be very attractive for
a great number of hams. The price could be as high as $7995. I doubt
$11000 unless they're making two verisons, one a commercal version for
military and marine use ($11K) and another version for hams ($6K-8K).

Just my guess for what ever it's worth.

For Sale - Texscan Sweep Generator model SG-677U $99.00 + shipping & handling.

Unit is mounted in a very sturdy military carrying case but can be removed for rack mounting. I have no way of testing other than making sure it turns on and the dials and gages looks like they are working, so I am offering on a money back guarantee ( less return shipping cost). Pictures can be found at www.dentonmarket.com or contact me at mikelgiles@bfesystems.com

# 1664. FS: Peanut Whistle Two

FS: Peanut Whistle 2. Have a demo "PW2" on my shelf. A photo is at my website. Click "Peanut Whistle" at left menu. Only difference between photo & actual xmtr is the use of RCA phono jacks for the 14v input & for the antenna feed. Also used crafted "hobby wood" to mount the xmtr/code key. Assembled xmtr, key and 7.040 mhz crystal ALL for just $39.95. I will pay for shipping/insurance. Use this xmtr with any portable rcvr,(ie: Sangean 909, Grundig YB-400, Sony 7600) for a FUN lil' QRP station! First e-mail gets it! 73, Bill, WA8MEA, wa8mea@hotmail.com, http://qth.com/dwm

# 1665. FS or TRADE Microwave Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-13 20:21:11 UTC
From: yea right <spam@spam.spam>
Message-ID: <pan.2004.03.13.20.21.10.922356@spam.spam>
Source record: 22767

I removed from one of our buildings some surplus 40Ghz microwave equipment that I would like to trade or sell as I will not be in the position to play with microwave for a few years.

This was a full redundant (2 radios) DS3 service with a ~1 meter dish and a ~.5 meter dish. I only have the one end of the system. The radios attached to the back of the dishs in a shell and consist of a receiver and xmitter in one case. The interconnecting signals are sent (with DC) on one coax to a control head.

I have taken the cover off of one radio on the small dish and took some pictures.

http://www.vambo.org/pictures/micro
(click images for progressively larger versions)

There are several RF cans inside the unit. There are two distinct chains. I can assume one is xmit and the other rx. The large aluminum plates contain electronics, however I have not opened them up to see what is in them. There are also several adjustable filters. One of the cans near the wave guide must be xmit/rx combiner. I can't imagine all of this filtering takes place at 40Ghz and would assume there are several IF stages as the plumbing looks intricate.

The other electronics are a DS3 demux and a T1 channel bank.

I plan on keeping a few pieces of the system such as the surge suppressors, breaker/power-distro panel and batteries. Everything else picture will be included, including the not pictured ~1M dish/radio. The systems are sold as-is and considered functional when removed. The only issue is that one of the control heads is missing. I will inventory the items if there is any interest. I will consider parting out the radios if there is no interest in the system.

What I would like to trade for is a modern base VHF/UHF radio that can be used in satcom in the future. The radio must support digital modes. As far as selling, I'm not sure what to ask for a price but I must insist that it be worth the time I spend boxing it up for shipment. My considerations will be more favorable for someone local to the Denver area. USA purchasers only please. Purchaser must pay all shipping. I will reply to serious offers with full contact info.

If you have any questions or offers, email me at recradioswap@vambo.org

I like mine a lot.

> Seems to have a clear signal, in and out, and it will put out the full
> 5 watts even with the alkaline battery pack (not true of every model).

I bought the battery case Just In Case. One of these days I should put batteries in the case and use it just to make sure it works as well as I think it should.

> Not that I abuse it, but it does seem quite capable of dealing with
> harsh uses.

Mine's been rained on and juggled once (and I don't know how I kept from dropping it). It keeps soldiering on.

> Two thoughts, though:

> As with most HTs, a upgrade aftermarket antenna will do better than
> the stock rubber duck. I use a flexible 1/4 wave on an SMA-BNC
> adaptor.

For my needs the ducky is adequate. Gary, I have seen quarter waves on a SMA rather than on a BNC. Using one of these would reduce the leverage applied to the SMA connector on top.

> With 200 memories, I would question the sanity of anyone who tries to
> program them via the keypad. Get the software and cable (I would
> recommend the RT Systems over the Yeasu version).

The Yaesu software carries a license that prevents one from using it in any kind of endeavor involving creating programming software for the radio. I never installed the software once I read the license. I can't say WRT the RT Systems software.

200 memories is a lot to plug in from the front panel. If one can be content with a small handful of memories, though, programming from the front panel is not at all onerous.

> The only improvement I would ask for is if they made a dual band one.

A 220 version would be nice, as would one on 440. I'd like to see a weather channel alert feature, though that may be in the software I sold at a loss once I read the license. Its Public Safety brother, the VX-800, has a second microphone element on the bottom of the case for noise canceling. This little radio could use one.

If I had it to do over again, though, I would definitely buy another one.

From: Thierry <"To answer me in private use http">
Message-ID: <40546d31_2@news.vo.lu>
Source record: 22773

Hi,

Technical question requested by a ham:

Is it possible to receive an image signal on a low frequency on USB mode and find the true signal at some higher frequency in LSB (e.g. 6.1 mhz usb and 7 mhz cw-lsb). It seems that some UA stations emitting on 40m have their image on 6 (e.g. 7043 - 6135 = 907 / 2 = well IF 454 khz) but a reversed mode ... ?? Looks really strange if not impossible.

Thierry

An image frequency always have it's sidebands inverted. That is part of
the reason why amateurs use LSB on 80 and 40 metres and USB on 20 15 and
10.

One of the first SSB transmitter had its IF between 40 and 20 metres and
the sideband was not switchable. So the result was LSB on 80 and 40 and,
USB on 20 15 and 10. It became a de facto standard.

Note that there were only 5 HF bands at the time.

Jean-Marie

# 1672. Your day after tomorrow transceiver : HFGW ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-14 15:45:57 UTC
From: Thierry <"To answer me in private use http">
Message-ID: <40547e32$1_1@news.vo.lu>
Source record: 22775

Hi,

HFGW, your day after tomorrow transceiver ?

Still better that superhet or DC to daylight RTX : the high-frequency gravitational waves transceiver (HFGW) !
In a few words GHz HFGW waves open up the prospect for extremely high-bandwidth, nanoscale transceivers, whose signals pass through all material things unattenuated and can, for example, reach deeply submerged submarines - the ultimate wireless according to Dr. Baker "point-to-multipoint QHz communication without the need for expensive enabling infrastructure, that is, no need for fiber-optic cable, satellite transponders, microwave relays, etc. Antennas, cables, and phone lines would be a thing of the past!"

All info here : http://solo3.abac.com/gwinstitute/articles.htm. Oustanding !

Up to now I have found nothing more futurist (and still accessible to researchers)

Charlie

I'd shoot for a bit more than -65 dB. A good Sinclair notch duplexer
can easily exceed -95 at 600 kHz spacing. I wouldn't good for much
less than -85 dB on a two meter system.

For really inexpensive equipment any of the old signal generators like that will be helpful. It might also be helpful if you add a frequency counter so you can set the frequency of the generator accurately. Some of the old Eico, Heathkit and knight generators that cover broad frequencie ranges can be bought for about $ 10 to $ 30 off e-bay work for what you want to do.

# 1677. Channel Master Rotor Malfunction ????

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-14 23:53:44 UTC
From: James Nipper <jnipper@fdn.com>
Message-ID: <c32r7i$22sj8g$1@ID-77366.news.uni-berlin.de>
Source record: 22780
Cross-posted to: alt.home.repair,rec.radio.amateur.equipment

I have a small antenna Rotor, ChannelMaster, that has developed a problem. The antenna will not turn in either direction. The control box **pointer** moves around like it is working, but the antenna does not rotate. I have checked the wires for breaks, etc, and have climbed the tower to make sure the wires are still connected to the rotor. I have also checked for binding, and find no problems.

I have checked for voltage at the output of the control box. I get about 40 volts from the common lead to one of the other 2 wires. But, surprisingly, I also get about 25 volts from the common wire to the other of the 2 wires, but all the while the rotor control is going in the same direction !

I would have thought that I should get 40 volts from common to just one of the other 2 wires (same clockwise) and no voltage from common to the **other** wire until I changed directions.

So, without buying a new rotor, etc, I would like to see if I can isolate and maybe fix the problem.

Any ideas on this one, especially comments on whether the voltage tests seem normal ??

Thanks for any help !!

--James--

Try a new capacitor. If you can not locate a replacemnet try connecting the
negative leads of two electrolytic capacitors together and connect the
positive leads to where the old capacitor is . Use double the value of MMF
of the old capacitor and a voltage rating equal or greater than the old one.

Hello group and thanks for any help you can share

We have a basic baby monitor set up in the nursery and the extensions are set up in our bedroom and the livingroom.

Twice now we have clearly heard transmissions of our baby and our own conversations that occured 15 minutes earlier.

This morning my wife and I were standing in our room WITH the baby while we listened to him crying on our monitor and her going in to get him which happpened about 15 minutes ealier. Very odd to me.

How is is this possible? Is this possible?

It was definately not some other picked up transmission from the neighborhood. It was like time delayed transmission.

Very curious.

This also happened once before

Thanks for any help. Im very curious how this is possible

Thank you, I will try to find one. Would a bad capacitor cause the voltage to flow on BOTH lines at the same time (clockwise and CC) ?????

You're _sure_ you aren't hearing a neighbor's baby monitor? We sure did on
occasion. It was very comforting to know that other folks were suffering
through the same things we were!

Otherwise you have a very odd baby monitor that's recording things, or a sly
neighbor who's recording and playing back.

# 1684. Re: why 3-phase power?

> > >> phases? Why not plain ole hot & neutral?
> > >

I'm bored, so I just did a literature search. It can be shown (I just love that phrase) that, for a given frame size, the power throughput as a function of the number of phases asymptotically approaches a limit, of 57% more than a single-phase motor can provide (Electrical Technology 6th ed., H. Cotton, pp265-267). His argument is for machines, but by analogy extends to transformers (and transmission lines) too.

Three-phase gives 50% more than single phase, i.e. 1.5/1.57 = 95.5% of maximum theoretical throughput. Two-phase gives 1.414/1.57 = 90% of theoretical maximum.

how did he figure this out? drawing a circle, of course! Looking at an armature with a uniformly distributed winding, the portion lying in one pole pitch - the arc between stator points A & B, which are 180 electrical degrees apart. let the current be I, and assume the whole winding is utilised.

Draw a half-circle, marking -90 and +90 degrees as A,B respectively. For single phase, E = Vab, and P=EI (straight line between A,B) = Po

for two phases, each phase voltage length is E/sqrt(2) [1/sqrt(2) = sin(45 degrees)] therefore total voltage is [2/sqrt(2)]*E = sqrt(2)*E, P=sqrt(2)EI=1.414Po

for three phases, each phase voltage length is E*sin(90/3) = E/2, P=(3/2)Po = 1.5Po

aha! now the geometry is clear....

for n phases, P=n*sin(90/n)*Po - 4 phases, P=1.5307Po.....

limit as n-> infinity is of course pi/2 = 1.5708

n % theoretical max throughput
1 63.6%
2 90.0%
3 95.5%
4 97.5%
5 98.4%

and so on. Of course a three-phase system can (and usually does) have one less wire than a 2-phase system, or at worst the same no. of wires (ie 4) so 2-phase is pretty much a waste of time.

4 vs 3 phases: 97.5%/95.5% = 102.1% i.e. +2.1% - bugger all gain for that extra phase, not to mention 8 wires.....

so where do you see single phase stuff, and why? CHEAP, low power stuff.

that pretty much answers that question!

Watch the baby's head when this happens. If it turns 360 degrees, you
got a bad case of demonic possession. Call the Vatican and Jerry Springer.

Imagine three phases separated by 120 degrees. In a fit of originality, call them A, B, and C.

Now imagine three equal resistive loads, one from A to B, one from B to C, and one from C to A.

If you calculate the power dissipated by the (combined)three loads throughout the cycle you'll find that it stays constant - no 60(50) Hz ripple. While one load is going through a zero crossing, the others are at 60 and 180 degrees, etc.

Though of limited utility in the home world, in large commercial machines, transformers, and transmission lines, this is a very important factor, and makes life much easire for the power distro guys.

|
| 4 vs 3 phases: 97.5%/95.5% = 102.1% i.e. +2.1% - bugger all gain for that
| extra phase, not to mention 8 wires.....

You can get 12 poles from 4 wires when in the WYE configuration. Labeling
the wires A,B,C,N you can do:

pole hookup

1 A-B
2 A-N
3 A-C
4 N-C
5 B-C
6 B-N
7 B-A
8 N-A
9 C-A
10 C-N
11 C-B
12 N-B

Of course you do have to make the odd numbered (hot to hot) windings rated
for the sqrt(3) times higher voltage than for the even numbered (hot to
neutral) windings. Whether it is worth building more poles into a motor or
not to accomplish this I cannot say. But it would give a tad bit more over
the 6 pole, and not require any more electric distribution wires than is
already commonly in place for WYE systems.

Everything is worth fixing if it can be done without excessive cost or
time. If the motor is dead, then junk it, till them try simple fixes.
Yes, 25 to 40 volts is about right for these things.

Right. My advice is, it won't be worth it. The new units perform much
better, and the additional life to be expected from a repair to this old
unit don't justify the effort, even if it initially succeeds.

Now if you really want to blow a few minds, explain that in three phase
the sum of all the voltages is always zero. (Actually true of any
polyphase that splits 360 degrees equally.)

You do know that by installing a baby monitor in your home, you are in
effect placing a "bug" in your home that ANYONE can listen to and record
and play back at will don't you????

None of these replies have answered my question about the voltage being on both wires at the same time. I would think it would be impossible for the motor to turn with voltage on both windings (clockwise and CC) AT THE SAME TIME.

This just doesn't seem normal to me, and I am not sure if the capacitor would cause this.

Sounds like a prank. But as has been said you have placed a "bug" in your house that allows most people with scanners to hear just about everything, and I do mean EVERYTHING, that goes one in your home. Either that or your house had ben drifting in and out of the Twilight Zone.

Say HI to Rod for me :)

Guys, you would be SURPRISED how many people do NOT know that. I've told a few about their cordless phones and they damned near had a heart attack. Not people I would be able to hear, but people in general. They just don't know. I've never bought a baby monitor, so I don't know what the instructions may say. Maybe they should state that ALL transmissions are able to be picked up by scanner radios. Maybe it is in there and they just don't read the directions - who knows? But they are completely unaware of their actions.

I'm not sure what part you're saying "NOT" to! I didn't mean heart attack literally! Just a figure of speech, wondering how many have heard their "phone calls". But I'd be willing to bet, if you ask the majority of people "not radio oriented" if they knew their calls or baby monitors were able to be overheard, most would say NO. Most of those I've told, had no clue. Not everyone is in tune as we are.

AC voltage on both wires would be normal for an AC two-phase motor. One wire is fed directly with
AC, the other is fed through a capacitor. The capacitor causes a phase shift which determines the
direction of rotation. Your voltmeter will not detect that the two voltages have a phase difference. If the capacitor is shorted, the two voltages will be in phase and the motor may not
rotate.

You would really need to worry if you start hearing conversations which occur 15 minutes later.

Back about two years ago, I used a vox'ed 48 mcs W/T in front of
my 6M rig's speaker to inform me when the band was open -- at other
places around the house - using squelched W/T's and scanners.
6M being what it is, I collected more credit card numbers (and
expiration dates) than new grid squares.
The Phone Sex was "interesting", too. HI!HI

(I've since moved to a similar scheme _NOT_ using the 48/49 mcs toys.)

I think you are seeing the "return" voltage of the other, not-energised
winding of the motor. The motor, after all, would be acting like a
transformer -- with the "energised" side of the motor being the primary
winding, and the "un-energised" side of the motor being the secondary.

It's just an inefficient auto-transfomer when measured that-a-way.

# 1713. Rough R-391 for sale or trade

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-16 01:01:27 UTC
From: Kevin <k9hxNO@SPAMarrl.net>
Message-ID: <c35jl901fje@enews3.newsguy.com>
Source record: 22665
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Over the weekend I had an experience with an unusual find. I was helping a friend
clean out some junk off his back porch to go to a local swapmeet. All of the stuff
had been on the back porch a little too long. On the bottom of the pile was a
R-391! I asked how much he wanted for it, and brought it home. Part of the deal
was to trade him some broadcast quality video equipment of mine that he has had
in his possession for some time.

Unfortunately, it too has been on the non climate controlled back porch a little too
long, but with the exception of missing the 3TF7 ballast and one of the 6082
regulators, it appears to be complete. It still has the tube pullers and tools in their
holders on the rear panel, the tube pin straighteners are still in place, as is the
"Green Gear" and bristol wrench on the bottom side of the rig. Both top and bottom
covers are in place as well. This R-391 is in rough shape, but I believe that it could
be brought back. I have made NO attempt to fire it up and will not do so. I will
entertain all offers for the next two days or so, and if nothing appealing comes along,
then it goes to Ebay.

I have several pictures that I can e-mail to interested parties. I will ship the receiver
but estimate $100 for packing and shipping. I would be willing to drive up to 100
miles one-way from southwest Indiana to complete the deal in person and save the
successful party the packing and shipping costs.

I am interested in an Icom 706 MKIIG, Yaesu FT100/FT100D, a set of good
working Drake twins (T4XC-R4C-AC4), a Pentium II (or better) 400MHz
laptop with serial and usb ports, ac adapter, CD and floppy drives, 128MB of
ram and a 10 gig HD, or an offer to purchase. Thanks for your time and the
bandwidth.

73,

Kevin, K9HX

Hello, I just bought a Icom IC-2100 radio and have read that there is a power adjustment and was wondering if anyone has messed with it to raise the power output of the radio which is 50 watts. I do have 2 external ball bearing PC fans mounted on the heatsink to keep the radio cool, so that shouldnt be a problem, I was just curious.

Hi

I bought a PA-module made by Clairemont Industries, San Diego, Cal,
USA at a local hamfest. The type number is Ci-110, and it is marked
49mhz (49 MHz). It uses two SD1446 in push-pull, at 13.8V.

I believe there is a CB version of this amp as well.

Can any of you help me with schematics and/or specifications?

73, Tom

What He Said.

The problem with non-cancelling neutral currents can be particularly pronounced where _big_ switching power supplies are involved, as in large mainframe computers[1]. The neutral in that set of power cables carried bunchty amperes. The same still holds true for our machine-room UPS, which does 480VAC-to-480VDC-to-480VAC using three enormous switching supplies, with the AC inverter driven by about 480 VDC off a big stack of deep-discharge batteries[2].

[1] Our IBM 9021-580 had several supplies rated for 3VDC at 500 Amps continuous, about 6 rated for 5VDC at 300 Amps continuous, and a few fairly hefty supplies at about 12 VDC.

[2] I _did_ accidentally strike an arc off those batteries once, while installing new batteries, and it was *loud* and *bright*.

| times higher this way, and this has led to undersized (hey the current
| cancels) neutral wires catching fire in some cases. Nowadays buildings tend
| to have much gruntier neutral wires.....

Are you sure it's just sqrt(3) times?

Imagine this experimental setup:

1. A 208Y/120 volt 3-phase circuit (Europeans can use their 400Y/230
volt circults by changing the values appropriately).

2. Three separately switched banks of 24 100 watt lights (2400 watts,
20 amps at 120 volts).

3. Three separately switched banks of 72 100 watt lights (7200 watts,
60 amps at 120 volts).

Test 1:

Turn on ONE bank of 2400 watt lights and measure the neutral current.
Should be 20 amps. Measure the heating. Should be proportional to
20^2.

Turn the lights back off.

Test 2:
```

Turn on ONE bank of 7200 watt lights for 1 second and off for 2 seconds, repeating this cycle every 3 seconds. The neutral current should have 60 amps for 1/3 of the time, and 0 amps for 2/3 of the time. Measure the heating. Should be proportional to (60^2)/3.

The heating is now 3 times as much as in test 2 as in test 1. Remember the "I squared" rule. You're squaring triple the current, so it's nine times as much dissipation while on, divided by 3 because it is on only 1/3 the time.

Turn the lights back off.

Test 3:

Turn on all three banks of 2400 watt lights in sequence every 3 seconds so one bank is on only 1 second and off 2 seconds with only one bank on at a time.

Now the neutral gets a continuous 20 amps. That's just the same as if one bank were on continuous. Heating is proportional to 20^2.

Turn the lights back off.

Test 4:

Turn on all three banks of 7200 watt lights in sequence every 3 seconds so one bank is on only 1 second and off 2 seconds with only one bank on at a time.

Now the neutral gets a continuous 60 amps. The heating is proportional to 60^2, but this time there's no off time, so there is no divide by 3. So the neutral in this case is getting 9 times the heating effect as each hot wire would get in the case of a continue 20 amp load. But in this case the hot wires are getting heating in proportion to (60^2)/3 as well.

Turn the lights back off.

Discussion:

Basically you have 2 factors here. A load can be rated for N amps average current load, but could, in the worst case, really pull N*3 amps 1/3 of the time. Given that the phasing of those current pulses is likely to be synchronized to the AC cycle, such short pulses would mean that no current sharing takes place, and the neutral will get a full N*3 amps when you have these loads balanced across all phases. That's not N*sqrt(3) since there is no sharing of current at all with these deep pulses. Further, you have I^2 power losses to consider at the N*3 current level --> (N*3)^2 --> N^2*9.

That's NINE times the power loss in a neutral conductor that is not upgraded to handle this situation.

That's THREE times the current in this worst case scenario.

That's an extra hot neutral even if it is double rated as commonly practiced.

Hopefully the I^2*R rule applies to the heating element in the circuit breakers, too, so that they eventually trip if you put on too much deep current pulse load. But in any case, I believe you need 3x (not 2x) neutral rating for the worse cases.

The question is, how often do these worse cases happen? Do switching power supplies and other non-linear loads ever reach this extreme. I doubt it, but just in case, keep this in the back of your mind.

While I do not know what frequency you monitor uses I do know that in my neiborhood most of them seem to on the 49mhz band and have surprising range. When we last used a baby monitor in 1996 - 1998 we could hear up to 3 different ones on the monitor itself. At about that time I got a ham transceiver which had coverage of the 49mhz band and found that with my 50mhz directional antenna (6 meter band) I could hear baby monitors from almost a mile in all directions, as well as the older 49mhz cordless phones at almost the same distance.

What people don't understand is that these devices radiate a pretty good signal than can be heard a long way with the right receiving equipment. Very old cordless phones operating in the 1.7mhz band could be heard at astounding distances.

I would guess that you have a neighbor whi is in fact recording your conversations and the baby crying and transmitting them back.

Switching power supplies are probably a critical case, because even with
different designs, the triplen harmonic phases are very close together.
There is a practical limit to how much 3rd harmonic can be produced,
because if the rectifier conduction angle is too short, the inrush
current becomes very bad news. My estimated lower limit figure for
conduction angle is 36 degrees and at this angle the 3rd harmonic
current is indeed almost equal to the fundamental current, but not
quite.

Huh? WWVH in Lihue used to come in five and nine everywhere in Hawaii.
On AM car radios, tape recorders, sometimes even rice cookers.

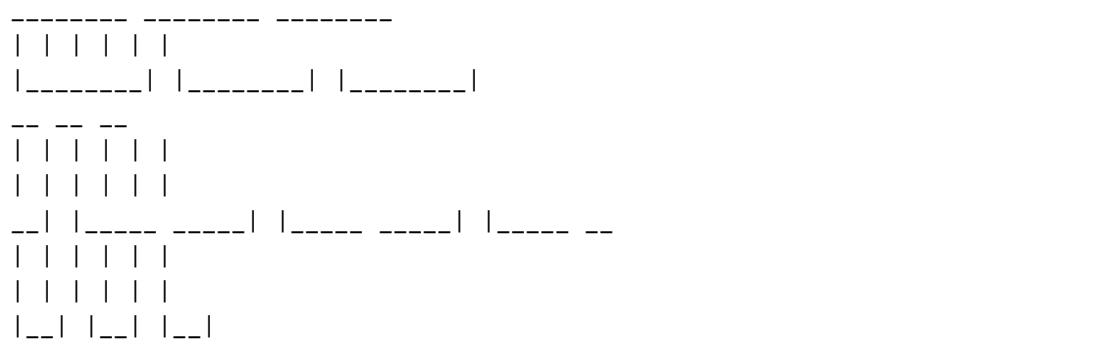
| Switching power supplies are probably a critical case, because even with
| different designs, the triplen harmonic phases are very close together.
| There is a practical limit to how much 3rd harmonic can be produced,
| because if the rectifier conduction angle is too short, the inrush
| current becomes very bad news. My estimated lower limit figure for
| conduction angle is 36 degrees and at this angle the 3rd harmonic
| current is indeed almost equal to the fundamental current, but not
| quite.

Almost equal?

I'm not sure what you mean by "conduction angle is 36 degrees", but if you mean that the amount of time a conduction takes place in one pulse, that would mean 1/5 time (two pulses per cycle).

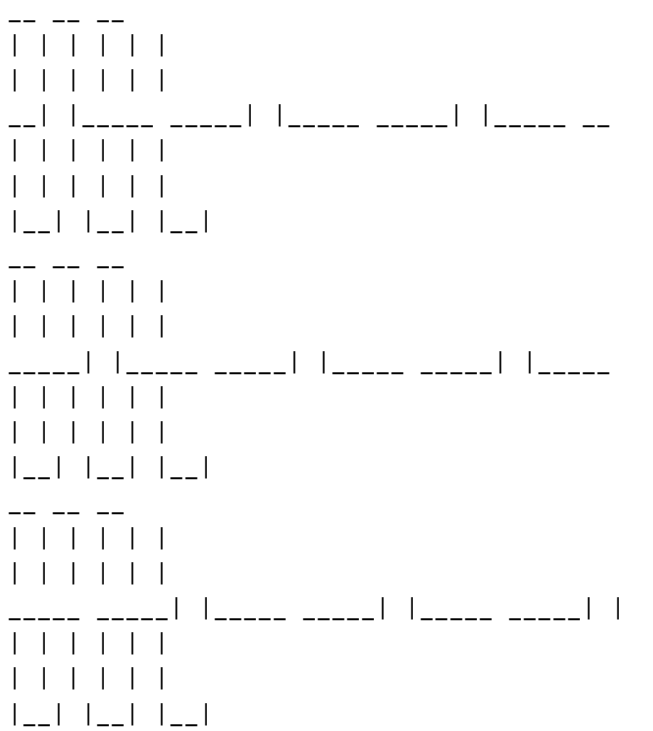
Consider a pure square wave, where there is some current overlap and thus some cancellation in the neutral, vs. a 3 times narrower and 3 times higher current pulse:



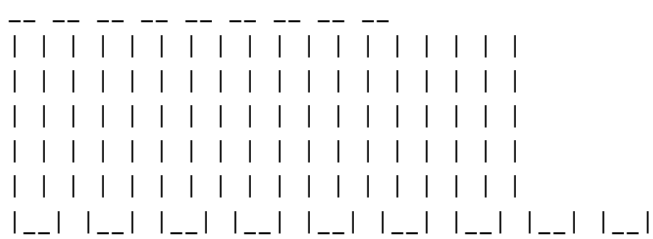
Note that to accrue the same current storage, shorter pulses have to be higher pulses.

And lets not forget that W=I^2*R, which means for the same average current pulses of N times the current, 1/N as wide, will have peak dissipation at N^2 and average dissipation of N^2/N or just N times as much. So even on single phase, narrower pulses of more current wastes more power heating up the conductors.

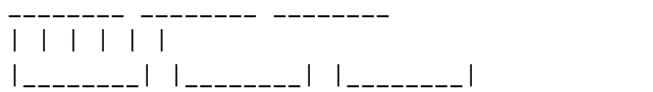
Now lets examine 3 phase with 3 such pulse waveforms at 120 degrees:



When these combine in the neutral you now have (note that I reversed the phase relative to the above pulses since above they represent current in the hot wires, and here is the neutral):



Compare that to the original square wave:



To understand this in terms of spectral components, a square wave has 3rd harmonic current at 1/3 the fundamental (5th at 1/5, 7th at 1/7, 9th at 1/9, and so on). But the pulse wave form is 3 times higher. It is the same as if you had a new fundamental at 3x the frequency, but gated it off 2/3 of the time. So now you have the 3rd harmonic of the original fundamental at the same current level as the fundamental itself. The pulse waveform is much richer in harmonics than a square wave. Then when those 3rd harmonics (and other triplens) merge in the neutral, they do not cancel, and they do add up to 3 times the current.

It may be easier to just understand it in terms of the timing.

But do also remember that W=I^2*R which means that the hot wires are now getting 3 times the current (9 times the power) for 1/3 the time, and so

are dissipating 3 times the average power ... but the neutral is getting
that same 3 times the current with the full 100% duty cycle, so it does
not get to divide the I^2*R by any duty cycle, and thus dissipates 9 times
the power in its resistance.

Typical harmonic mitigation practice is to double the neutral capacity.
I sure hope in these cases that this worse case scenario isn't happening.

>Almost equal?

Yes. There is a misunderstanding. For **ONE** SMPS, with a conduction
angle of 36 degrees, the third harmonic current is nearly equal to the
fundamental current.
>
>I'm not sure what you mean by "conduction angle is 36 degrees", but if
>you mean that the amount of time a conduction takes place in one pulse,

Yes, that's what I mean. It's a common term used in considering
rectifier circuits. The current pulse is often surprisingly close to
sinusoidal, but the apparent 'frequency' is higher than the supply
frequency, of course.
>
>that would mean 1/5 time (two pulses per cycle).

WTB: I need a controller box ( the CR-4) for the Daiwa Rotator MR 750E or if someone is parting out the controller, the IC board therein. Will take either and compensate well for the unit.

Please check your spare gear.

Thanks,

Bill

# 1735. Amplifier Wanted Johnson Valliant II and more for trade

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-16 21:26:04 UTC
From: dr_oris@yahoo.com
Message-ID: <4203c071.0403161326.6a3e43f9@posting.google.com>
Source record: 22689

Hello all, I have 4 amplifiers. Station 550, it does between 200 250 watts dead key and swings to 550. This amp takes 2 watts to do this. A ameritron ALS 500 moblie amp with the 10 meter mod. 25 watts swinging to 70 will give you 200 swing to 500 with 80 amps of draw on the battery. You can run this amp more effectivly by running two 2200 uf 16 volt electrolitic caps in parallel with that battery and the amp. I have a palamore three tube amp. 12BT6 driving two 6JS6Cs it needs tubes so I have no idea what it does. Then there is the VooDoo 300 B it is a base amp and puts out about 150 watts with 300 watts of swing. The power to drive this amp is 2 watts. The Station 550 and the voodoo 300 B are broad band amp so they will work anywhere between 80 and 10 meters. I have a Johnson Valaint II that needs a Low voltage transformer. Its for pick up only. To heavy to ship.
I have a Pro 2052 trunk tracking scanner as well as a 300 watt MFJ 949C antenna tunner and swr watt meter. Sycron 1000 watt meter as well as to rerceivers. I also Have a Pentium 233 complete dialup internet ready computer. Includes monitor keyboard video cammera vidio card and mouse.
I am looking for a good amp that I can drive with my RCI 2990. Some thing with 4 811s, or 2 or 4 CX 250s, or, 2 or 4 572bs, a single or pair of 3-500s all mounted vertcal of course

But is that 36 degree total over a 360 degree cycle, where there are two pulses of 18 degrees each, one up, then one down 180 degrees later, or is that 36 degree pulses, for a total of 72 degrees of conducting?

But even with 72 degrees, if three loads distribute their pulses over 120 degrees in time, nothing overlaps, so the neutral carries it all.

I am looking for a parts unit for any of the HP 8557 and higher series of Spectrum Analyzers. I need especially the knobs and front panel complete and don't care if the unit works or not. The more complete, the more I'll pay. If you only have the knobs, I'll take them. Please advise condition and
price on reply.

Remove NOSPAM from e-mail to reply.

only with a linear load of course. this is where power distribution becomes
interesting - in a big building, 3-phase + neutral is used for power
distribution, with phase-to-neutral voltage being the "single phase" at the
wall.Often, one floor = one phase. place a rectifier/cap load on these, and
the currents are not sinusoidal at all, so the neutral currents DONT
cancel - they add! IIRC you can show that the neutral current can be sqrt(3)
times higher this way, and this has led to undersized (hey the current
cancels) neutral wires catching fire in some cases. Nowadays buildings tend
to have much gruntier neutral wires.....

2 phases, one pole-pair (180 electrical degrees). there is not necessarily a
correlation between the number of phases, and the number of pole-pairs
(which can be anything you like - high torque low-speed motors often have >
12 pole pairs)

> 11 C-B
> 12 N-B

>
> Of course you do have to make the odd numbered (hot to hot) windings rated

again, dont care about no. of pole pairs in machine. It is simply easier to use one pole-pair for the purposes of this analysis. regardless, it is still 180 electrical degrees we are considering; more pole pairs simply means fewer mechanical degrees per 180 electrical degrees (sorry about the dreadful parlance, but thats what you find in motor texts)

> for the sqrt(3) times higher voltage than for the even numbered (hot to
> neutral) windings. Whether it is worth building more poles into a motor or
> not to accomplish this I cannot say. But it would give a tad bit more over
> the 6 pole, and not require any more electric distribution wires than is
> already commonly in place for WYE systems.

as above, the number of pole pairs is a design variable for the motor. mechanical speed = electrical frequency/p where p = no of pole pairs.

ie w(mech) = w(elec)/p

power P = Tw = const so T = P/w = Pp/w

in other words, all adding pole-pairs does is slow the machine down, thereby increasing torque (for the same rated power).

there are some truly massive machines with >> 12 poles that exist (36 springs to mind) used for example in electric power generation, low-speed rolling mills etc.

I have the following Heathkit items for sale that are excess to my needs. Prices do not include shipping. I will ship overseas.

Heathkit HD-30 Crystal Calibrator.....$35 plus shipping
Working unit in exceptionally nice condition with a copy of the manual
http://members.cox.net/radiostuff9/heath_cal.jpg
http://members.cox.net/radiostuff9/heath_cal2.jpg

Heathkit HW-2036 2 Meter Transceiver and HWA-202-1 Power Supply.....$50 plus shipping.
Nice cosmetic condition. Receiver and power supply work fine.
Transmitter is not working
http://members.cox.net/hw202.jpg

Heathkit DX-40 Transmitter Parts
Heathkit DX-40 Plate Meter...$20 plus shipping
http://members.cox.net/radiostuff9/dx40meter.jpg
Heathkit DX-40 Front Panel and Cabinet.....$20 plus shipping
http://members.cox.net/radiostuff9/dx40metal.jpg
http://members.cox.net/radiostuff9/dx40metal2.jpg
Heathkit DX-40 Transmitter-Tube Set.....$20 plus shipping
http://members.cox.net/radiostuff9/dx40tubes.jpg

Also have the chassis with the bandswitch assembly and other parts. No power transformer

NOS Heathkit Manuals
These are NOS manuals that appear to have been purchased without the kit as none have the check marks for assembling the item. Finding an unmarked manual is rare unless you happen to come across an unbuilt kit.

Heathkit 2 Meter Converter XC-2 Assembly
Manual.....$60 plus shipping
Insides are excellent and the 8 foldout drawings are there. The back cover has a a bit of shop ware and their is a small stain on the lower left bottom of the front cover. Date on manual is 1959.
http://members.cox.net/radiostuff9/heathxc2.jpg

Heathkit AC-1 Antenna Tuner Manual- NOS.....$50 plus shipping
Insides are excellent and the 2 foldout drawings are there. The back cover has a a bit of shop ware. Date on manual is 1957.
http://members.cox.net/radiostuff9/heath_ac1.jpg

Heathkit SB-10 Single Sideband Manual - NOS.....$60 plus shipping

Insides are excellent and the 4 foldout drawings are there. The back cover has a a bit of shop ware. Date on manual is 1958.

I read in sci.engr.electrical.compliance that phil-news-nospam@ipal.net
wrote (in <c386j40rf8@enews1.newsguy.com>) about 'why 3-phase power?',
on Wed, 17 Mar 2004:
>But is that 36 degree total over a 360 degree cycle, where there are two
>pulses of 18 degrees each, one up, then one down 180 degrees later, or
>is that 36 degree pulses, for a total of 72 degrees of conducting?

It is 36 degrees in each half-cycle, which was your initial assumption.
If that had been wrong, I would have said so.

Regarding people being able to eavesdrop on baby monitors and cordless phones... I'm sure this is true for the baby monitors and older phones. But aren't the newer digital and spread-spectrum cordless phones at least much harder, if not impossible, to eavesdrop on? I'm sure with the right amount of knowledge, computer equipment, and decoders it could be done, but your average scanner junkie isn't going to go to that much trouble. Am I wrong?

For interception and decoding of spread spectrum signals, you need to
know the method (FH, direct sequence, etc.), the hop pattern or
spreading polynomial, the current point in the hop or spreading
sequence, and so on. None of this is trivial, but enough patience
will yield some or all of it.

The hardest part, of course, is determining _how_ the freq. hopping or
the spreading is being done, i.e., the pattern or polynomial and the
current point. It's really a problem in modern cryptography, which can
be made easier if the system (e.g., phone manufacturer) is known,
since you can buy one and scope out the interesting stuff, like
the FH pattern or spreading sequence.

If the spreading sequence is generated by an LFSR and you have more
than 2*length_of_LFSR consecutive bits of the spreading sequence, it
is a "trivial" exercise in linear algebra to recover the tap sequence
of the LFSR and build a simulator. From there you try to determine
how the LFSR is initialized for a phone call, and once you have that
you're home free.

## 1757. Which VHF's Easily Programmable?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-17 14:39:08 UTC
From: ned <thearkie@fastmail.fm>
Message-ID: <qvng50du216q9mu2l78lh628su9c1ontn9@4ax.com>
Source record: 22810

Just joined Public Safety organization. Looking for inexpensive ($150) VHF (156.xxx). Have been watching Ebay and see some Kenwoods, Yaesu/Vertex and Motorolas that might work, but I'm not sure which models are easily field programmable without sending them off for additional expense. Looks like many Motorola models require a rather difficult interface (something other than a cable and PC software).

Can anyone suggest a FAQ or give recommendations as to which older radios might be a good choice and relatively easily programmed?

I agree with Richard......
I did jack mine up to about 70 watts, only with a fan put on it,
but you are not going to hit any machine any better or hit any
other station on simplex any stronger with that 20 additional watts.

I usually keep my 2100H on medium power, concentrate on a
good 5/8 wave antenna with little loss and you will do fine... if
you live in a moutainous area you may find that a 1/2 wave
antenna will suit you better due to take off angle.

Power is always secondary to good feedline and a good antenna.

The topic is WWVB, the binary signal. WWVH is the voice signal, which an autosetting clock will not understand.

That may be the case Scott, but the 'atomic clocks' they are speaking of use the WWVB signal from Ft. Collins, Colorado on 60 KHz to set their time automatically.

That signal may indeed not be propagating well enough to be of use in Hawaii.

I agree with whoever said WWVH in Hawii is l/c and on same status
as wwv in Colorado, so these "skyscan" clocks should perform as
specified. I found though that my latest one will keep time
right to the second for a period of time, the I have to move it upstairs
where reception is better and leave it there for 24 hours. Once
reset to exact time tick I again put downstairs in the shack and its
good for another momth or so. I fail to see how the clock reader
can discriminate between WWVH (on Kauai) and WWV in Colorado.

But most atomic clocks use WWVB on 60 khz out of Fort Collins. WWVH, to my knowledge, only uses HF freqs (5, 10, 15 Mhz). But yeah, I'm sure the rice keeps better time than the people who eat it. :)

500kW or 1MW IIRC, somewhere around 24kHz.

OK, Thanks. I'm so used to many questions (of multiple question posts)
being routinely ignored, I just chalk that up to the way things are so
much.

I have found one practice that gets questions answered more often, though
I hate to use it because it also gets flames and other bad attitudes. That
practice is to simply state a wrong assertion in a post. More people are
more willing to give answers when it gives them the opportunity of proving
someone else wrong.

That's often considered to be trolling. And there is a risk that people
will see a wrong statement and miss any correction. There is also a
possibility that no-one will correct it, either through not noticing, or
because they expect some-one else will correct it.

I thought WWVH also had BCD data a couple times an hour? Or has that been
stopped along with the Omega navigation beacons?

Is there no VLF facility in Hawaii comparable to WWVB?

The data sent on 60 kHz by WWVB isn't transmitted by WWVH. Here's a
chart of the coverage areas of WWVB and it looks like it has a decent
chance of being received in KH6-land at certain hours, like 0800 UTC.

WWVH is the 2.5, 5, 10, 15, and 20 MHz voice and data transmitter, it's on
exactly the same freq as WWV in Ft Collins. If you listen, there's a
silence before the guy on WWV speaks, that's for the lady from WWVH to talk
first. (very polite :)

The clocks use WWVB which is a 60 khz signal.
Interference from LuaLuaLei may make that impossible to pick up.
There also used to be a Loran transmitter around 100kHz IIRC, on the north
shore of Oahu, but they may have taken that down now.

Back whenI used to design motor controllers, we made a range of single-phase 230V toys - 1A to 4.5A. The 4.5A single phase drive had a higher RMS current than the 16A 3-phase drive (this caused disbelief when the tech came back with the measurements, so we checked carefully, then ran some spice simulations - yep. and 3rd was about the same size as fundamental, and 5th wasnt much smaller (yay for voltech). These drives all had 3% line chokes too!

Hi,

Survey : what do you consider as an excellent transceiver from a pure technical side ?

I don't need that you answer me, "the RTX that suites your need, guy". I 'd like a more technical opinion, taking in account the worst traffic conditions.

If you like, can you give me your opinion, some clues, or even links developing this question (NB. I haven't got QEX that could probably help).

IMHO, and very shortened, after the TX module, the RX is the most important module of un transCV (obvious). The TX module of a transCV is quite easy to build with few component and it has even not to be powerful (QRP). But the receive module is by far more complex. If a TX helps you to send your signal to the antenna, you need also an excellent RX to be able to listen to your contact whatever the conditions.
Without speaking of the sensitivity (that I haven't discussed, looks obvious too), an excellent receive module should thus offer a great selectivity to remove or reduce noise and RFI and be active before the signal reaches the detection with the less amplification as possible (using filters like high/low cut, attn, rf gain, dsp slope, etc), excellent DSP filtering on IF stages, and all parameters accessible in "direct access" on the front panel instead of having to set these hundreds of values in sub-menus.
Of course you pay for it, but my question is purely technique.

Your answer will help me to complete an article I wrote about it, in which the selectivity has still to be developed (see later at http://www.astrosurf.com/lombry/qsl-transceiver.htm)

Thanks for your comments.

Not in Europe.

Old English is 240 V with neutral at earth potential and live 240 V 50 Hz
the rest of Europe used 220 V.
We are now harmonising on 230 V, our 3 phase is made from 3 x 240 V and
comes out at 400 V phase to phase.

I forget to say that I 'ld like an answer specifically for SSB.
In CW, a narrow filter of 270 Hz of bandwidth is enough to work all pile-ups
and weak stations almost lost in QRM. But in SSB, the signal is much wider
with an IF passband of about 2.4 kHz at -6 dB...

| 240 volt service is *phase-to-phase* (only 120 volt or sometimes 208
| phase-to-ground) whereas 277 is phase-to-ground *deadlier*.

There are no 208 volt phase-to-ground configurations around (this would have
360 volts phase-to-phase in a WYE configuration).

240 volts can be found phase-to-ground in some military systems as well as
Europe. You get 416 volts phase to phase. Europe has settled on going to
a nominal 230 volts phase to ground, with 400 volts phase to phase.

240 volts can also be found phase-to-phase or phase to ground in delta
configuration. It could be grounded at a 120 volte center tap on one of
the secondary windings, or grounded at one of the 3 wire leads (corner
grounded delta).

The ratio between a 400Y/231 volt system and a 480Y/277 volt system is 5:6,
the same ratio as the AC frequency in these systems.

If you need to elicit answers by passing yourself off as stupid, perhaps
you're either asking the wrong questions, or, more likely, you need to
reexamine your motivations and attitudes.

Yes, quite. Indeed it could be considered a pretty good definition
by example for trolling.

You seem to think that you have some sort of entitlement to answers
from Usenet. It's not a medium for questions and answers, you have no
rights to answers to questions, and there is no onus on any participant
to answer anyone's questions.

What good reasons are there for people to answer questions? I can think
on none, outside altruism. Noone gets paid to do so. Some people do
so for one reason or another, but those reasons are entirely personal and
surely you don't think that they entitle you to anything?

If you don't like the answers, don't ask the questions. Usenet is primarilly a medium for discussion amongst peers. Often it *is* used as a means of finding information from people who might know more about something than you do, but you have no automatic entitlement to anything. Have you ever considered that your apparently arrogant attitude to entitlement might be the reason people sometimes ignore your posts?

I think you should reconsider. First of all, you get much better answers
if you say WHY you want to do X. Second, since you are asking HOW to do
X, you clearly have a knowledge gap in that area, and it is not
improbable that X is simply NOT the best way of achieving your WHY.

For (real life) example, 'How do I create a phase-shift of 90 degrees
digitally for audio signals between 100 Hz and 5 kHz, for a low-
overspill induction-loop system?'

Answer: 'You don't: it's exceedingly simple to do this in the analogue
domain and not at all easy, by comparison, in the digital domain,
especially if, as is often the case, this is the only DSP operation you
need in the system. Furthermore, the digital solution gives you an
accuracy of phase-shift up to several orders of magnitude better than
you need, which is not 'good engineering'.

# 1789. YAESU FTDX-9000 info sought

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-18 13:23:20 UTC
From: Herman Kerry <kennjd@adelphia.net>
Message-ID: <0oWdnT_zYPh5P8TdRVn-vA@adelphia.com>
Source record: 22840

There are some posting on the IC-7800 Yahoo group (messages) refering to the up coming Yaesu FTDX-9000. No pictures other than a shot of the dual S-meters which suggests dual receive.
Its already been stated the radio is a replacement for the FT-1000D. Im looking for a full color picture of the radio and more info. This radio is so new that Yahoo - google fails to show anything.

The one that you design and build for yourself.

Only CBers buy off-the-shelf rigs which they are unable
to modify or repair.

|>|>attitudes. That practice is to simply state a wrong assertion in a
|>|>post.
|
| If you need to elicit answers by passing yourself off as stupid, perhaps
| you're either asking the wrong questions, or, more likely, you need to
| reexamine your motivations and attitudes.

You might also examine why it is that a question I once asked that got no
answers for 2 weeks was subsequently answered by someone who gave the wrong
answer, and then was immediately flamed by a dozen people for giving the
wrong answer (less than half of whom even bothered to give the right answer).

It's more an issue of attitudes of people.

|>| That's often considered to be trolling. And there is a risk that people
|>| will see a wrong statement and miss any correction. There is also a
|>| possibility that no-one will correct it, either through not noticing, or
|>| because they expect some-one else will correct it.
|
| Yes, quite. Indeed it could be considered a pretty good definition
| by example for trolling.

I won't say it isn't trolling. But I will say I have tried it and ...

... IT ACTUALLY WORKS!

Sad, isn't it.

|> These are other good reasons not to do it. These are also good reasons for
|> people to answer questions if they know the answer and happened to read the
|> question (and it hasn't been answered, yet) ... so that no one has to use
|> such tactics to get an answer.
|>
|> My most hated response is when ask how to do X, and someone asks why I am
|> doing X, and after answering that, I only get suggestions to use do Y instead,
|> and never get my answer on how to do X (because many people now skip the

|> thread, thinking it got answered). About all I can do in such cases is to
|> annoy that person long enough to get on their kill list, then ask again in
|> a new thread at a later time.
|
| You seem to think that you have some sort of entitlement to answers
| from Usenet. It's not a medium for questions and answers, you have no
| rights to answers to questions, and there is no onus on any participant
| to answer anyone's questions.

There is no such assumption at all. No one has an obligation to answer any question. The point is, that it still works. When one wants to get an answer, and there being no methods where an answer is obligatory, one does what one must do.

| What good reasons are there for people to answer questions? I can think
| on none, outside altruism. Noone gets paid to do so. Some people do
| so for one reason or another, but those reasons are entirely personal and
| surely you don't think that they entitle you to anything?

What good reasons are there for people to flame other people. The fact is that what motivates people more is not altruism, but aggression. Since that is the way things work, it's simply put to use. Instead of trying to get an answer based on altruism, trying to get an answer based on aggression gets results.

| If you don't like the answers, don't ask the questions. Usenet is
| primarilly a medium for discussion amongst peers. Often it *is* used
| as a means of finding information from people who might know more
| about something than you do, but you have no automatic entitlement to
| anything. Have you ever considered that your apparently arrogant attitude
| to entitlement might be the reason people sometimes ignore your posts?

The posts that were ignored were not showing any arrogant attitude. How I discovered this was a basic simple question that went unanswered many years ago. Someone did try to answer it a couple weeks later, and gave the wrong answer. But within hours a dozen people flamed him for the wrong answer. So altruism isn't there; aggression is.

Subsequently I tried a few different approaches on other questions I had. I tried one where I stated the question and stated what I thought the answer might be (but knew it was wrong). It got some response. I also tried to simply state an answer, not as a question ... and quickly got corrected.

I also found a few cases of other people asking question that went unanswered. I didn't know the answer so I could have just gone on. But I decided to try the next trick; I gave a false answer (but included the disclaimer "I'm not sure, but I think ..."). That got some real answers for the poor OP.

You say no one is entitled to an answer.

That is correct.

I'm saying this is a mechanism to get an answer given the circumstances
that no one is entitled to an answer.

It works most of the time.

How in the hell can the CLOCK detector tell any difference between
the time signal from WWV or WWVH. They are both on exact same
frequecies, the time tick is identical on both !!!!
Kokomo Joe
WWVH on Kauai has a consistantly strong signal. Albeit at times
is totally off the air several times in any given month.

If the signal format is *exactly* identical to WWV it has a continuous
time signal being sent as a 100 Hz tone at 1 bps. If you can't hear
it on your radio (because of "comm grade" headphone or speaker or
ears), you can use skysweeper in free demo mode and see the bits clear
as day in the waterfall display.

| on Thu, 18 Mar 2004:
|
|>My most hated response is when ask how to do X, and someone asks why I
|>am doing X, and after answering that, I only get suggestions to use do Y
|>instead, and never get my answer on how to do X (because many people now
|>skip the thread, thinking it got answered).
|
| I think you should reconsider. First of all, you get much better answers
| if you say WHY you want to do X. Second, since you are asking HOW to do
| X, you clearly have a knowledge gap in that area, and it is not
| improbable that X is simply NOT the best way of achieving your WHY.

Sometimes yes, I do get better answers when I explain why. But sometimes
I do not. Sometimes it degrades into long drawn out "discussions" about
why might well be a controversial issue.

A knowledge gap in one part of things does not mean a knowledge gap in
others. I've seen people too readily assume someone knows nothing about
a given field just because they don't happen to know 100%.

Remember the saying "a little knowledge is a dangerous thing". We should
be glad when someone who knows 50% is smart enough to ask about the other
50%.

| For (real life) example, 'How do I create a phase-shift of 90 degrees
| digitally for audio signals between 100 Hz and 5 kHz, for a low-
| overspill induction-loop system?'
|
| Answer: 'You don't: it's exceedingly simple to do this in the analogue
| domain and not at all easy, by comparison, in the digital domain,
| especially if, as is often the case, this is the only DSP operation you
| need in the system. Furthermore, the digital solution gives you an
| accuracy of phase-shift up to several orders of magnitude better than
| you need, which is not 'good engineering'.

You left out a lot of information in that question. An FIR can be programmed
to create a phase-shift of 90 degrees. Whether that is practical in the given
circumstances is unclear. If one is already working in the digital domain,
it may, or may not, be cost effective to do that. I only know about a few
things in digital signal processing, but otherwise this is not my area. But
I do see a lack of information there which does not always have to be filled

in by "why". Sure, it is very tempting to counter-ask "what are you trying to accomplish (so that I may give you a broader analysis)". But people who do ask that need to also be willing to accept that if someone really wants to do it a certain way, and that way can work somehow, even if it is a way you would never do.

What? You mean Gareth has commercial branded (CB) radios?

Whatever next?

You'd think he'd live like a Hammish - building his own house,
making his old furniture, house lit by candles, wife making
all of their clothes, own produce grown in the garden and
driving around Wiltshire in a pony and trap.

Two faced to the end.....

Oh that is unfair Graham.

As I recall, the posting did say that crucial tune up instructions were
missing from the FT101 manual and he later claimed the TS830 never needed
repairing.

Actually, he seems to have owned a range of commercial kit over the years-
TS830, FT221, FT227, FT707 have all featured in his posts.

He seems to have sold most of them- maybe to buy his law books and castings
he can throw in the bin.

Here is the WWV/WWVH time format:
http://www.boulder.nist.gov/timefreq/stations/wwvtimecode.htm

But as been mentioned before, this is a different format than what is
used by WWVB for synchronizing clocks.
http://www.boulder.nist.gov/timefreq/stations/wwvbtimecode.htm

I read in sci.electronics.design that phil-news-nospam@ipal.net wrote
(in <c3cpjq710k5@enews2.newsguy.com>) about 'why 3-phase power?', on
Thu, 18 Mar 2004:

>Sometimes yes, I do get better answers when I explain why. But
>sometimes I do not. Sometimes it degrades into long drawn out
>"discussions" about why might well be a controversial issue.
>
>A knowledge gap in one part of things does not mean a knowledge gap in
>others.

Agreed.

>I've seen people too readily assume someone knows nothing about
>a given field just because they don't happen to know 100%.

It IS difficult to know how much another person knows. I have this
problem with training courses, especially when the is a wide range of
proficiency in the audience.
>
>Remember the saying "a little knowledge is a dangerous thing". We
>should be glad when someone who knows 50% is smart enough to ask about
>the other 50%.

Or even 99.5/0.5: I've sent stuff to Win Hill, at his request. There is
something that I call 'the consultant's dilemma'. Often a consultant
know what CAN be done, but is less familiar with what IS done,
especially in a field where most projects do not involve a consultant,
such as consumer products development. Academics often have this problem
in spades.

Since Bill Sloman has been collecting far too many points in the
literary references competition, I'll take the opportunity to quote Pope
accurately:

'A little **learning** is a dangerous thing
Drink deep, or taste not the Pierian spring
There shallow draughts intoxicate the brain
And drinking largely sobers us again.'
>
>
>| For (real life) example, 'How do I create a phase-shift of 90 degrees

>
>You left out a lot of information in that question. An FIR can be
>programmed to create a phase-shift of 90 degrees. Whether that is
>practical in the given circumstances is unclear.

I did make a specific mention of 'real life'. I was asked the question
by a company well capable of developing the 'difficult' DSP solution,
when they first discovered it IS 'difficult'.

> If one is already
>working in the digital domain, it may, or may not, be cost effective to
>do that.

I mentioned that, too.

> I only know about a few things in digital signal processing,
>but otherwise this is not my area. But I do see a lack of information
>there which does not always have to be filled in by "why". Sure, it is

>also be willing to accept that if someone really wants to do it a
>certain way, and that way can work somehow, even if it is a way you
>would never do.

Agreed; what they usually do is to bale out, because there is no
obligation on anyone on Usenet to work out a solution that they believe
is wrong-headed.

As Bob implies, standardizing with the people you are working with is
very helpful.

Because of legalities from the FCC, any unit working in the commercial
range cannot be easily programmed in the field. A licensee is only
authorized for specific frequencies, and this includes public safety
organizations.

Most ham HTs do not need to be sent away for programming, very much
unlike the commercial rigs you seem to be familiar with.

If you have two of the same model, you can cable them together and
"clone" the memory from one to the other.

Alternately, you can get software for a PC (not Mac) which emulates
the other radio, and you can process a file on your PC to load into
the radio. Typical pricing is about $20 for the cable, $20 for the
software, no matter how many times you use them. Generally, you will
need a different set of S/W for each model you are dealing with.

If you really mean 156.xxx, that is well outside the ham bands, and
would require a commercial solution. There is no legal way to put any
ham HT into that frequency range.

Happy trails,

|
| It IS difficult to know how much another person knows. I have this
| problem with training courses, especially when the is a wide range of
| proficiency in the audience.

I did try some teaching many years ago. In some cases it worked out.
Teaching assembly language programming in 1973 worked a lot easier than
teaching HTML in 1997. The former case had all smart people; back in
those days anyone doing anything with computers had a lick of sense.
But in 1997, the same cannot be said even for something as simple as
HTML. It seems people should be licensed to use computers (given all
the spam zombies running these days, especially).

*sigh*

This is probably a factor in why a lot of people ask those who are
asking questions why they are doing it.

|>Remember the saying "a little knowledge is a dangerous thing". We
|>should be glad when someone who knows 50% is smart enough to ask about

| especially in a field where most projects do not involve a consultant,
| such as consumer products development. Academics often have this problem
| in spades.

A gap between theory and practice. Like the discussion I had about current transformers a while back. I knew all the theory, and figured out my own safety factors. But I've never worked with them, and didn't know what is actually done. It turns out my level of safety exceeded common practice. But it was interpreted by a few people that my lack of knowing exactly how LESS safe I can work with CTs to mean I didn't understand theory, needed to learn Ohm's law, etc. I still believe the current _practice_ is unsafe.

| Since Bill Sloman has been collecting far too many points in the
| literary references competition, I'll take the opportunity to quote Pope
| accurately:
|
| 'A little **learning** is a dangerous thing
| Drink deep, or taste not the Pierian spring

I like that.

| Agreed; what they usually do is to bale out, because there is no
| obligation on anyone on Usenet to work out a solution that they believe
| is wrong-headed.

In one case a few years back I had asked a question about how to do things the way I wanted to, and someone argued I should do things differently. I had already worked out (over a couple years time) the way I wanted to do it. But I was open minded, and willing to hear him out. In the end of about 2 weeks back and forth, it turns out I really was right, and my case was just an odd one. And he didn't know how, and everyone else had bailed out of the thread long ago. This experience influences my willingness to supply "unnecessary details".

But that's not what I said. WWV has its own 1 bps digital signal,
every minute. If, as you say, WWVH has the same format, presumably it
also has the same 100 Hz digital format as WWV (no suffix).

# 1825. Iambic Keyer for person with quadraplegia

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-19 05:14:24 UTC
From: Rick Nevill <rnevill@yahoo.com>
Message-ID: <Qkv6c.63589$u_5.48259@fe2.texas.rr.com>
Source record: 22627

Hello!

I would like to to make a custom iambic keyer for a person with quadraplegia. She mainly has use of only her index and ring finger. She can only flex her thumb and cannot release the thumb pressure at will.

Does anyone know of an iambic keyer kit or inexpensive keyer that I could dis-assemble to build a keyer with side-by-side rather than opposing paddles? That way she could use her ring finger for the dashes and her index finger for the dots (or visa-versa) . She cannot move her arm at all, so I will have to make a splint that can hold the keyer and her hand in the correct position.

The closest I have found is this site that lists alot of keyers: http://www.eham.net/reviews/products/16 and the MFJ-561K Minature Iambic keyer kit.

BTW, she cannot use a straw, so I cannot build her the keyer that was in QST last month!

Thanks for any help I can get!

73,
Rick

>Gary (net.yogi.bear)

Thanks Gary for the informative reply. As should be obvious, I am unfamiliar with radio frequency band allocations and exactly where they split. I probably picked the wrong newsgroup for asking this question.

My situation is, I need a radio that transmits on 153.xx and receives on 156.xx as mentioned above. I ASSUME any 2 or more channel radio capable of opereating in the 148-174MHZ range will work. There is no "standard" radio for the organization I'm with. I tried asking the local radio shop about changing a Motorola HT220 to the required frequencies (had this one from a previous job), but was told it would be a waste of money.

So...I started looking on Ebay for reasonably priced used radios. Quickly discovered that some older radios are more easily programmed than others. It occurs to me that, over time, I may want to add or delete a frequency to monitor other nearby organizations, etc., and that at $20-40 a shot to have someone program it, doing it myself would be advantageous. I thought there would be some reviews, faq's, etc., that would state which radios were more "user friendly", but apparently it's not that simple. I don't believe there is anything unethical or illegal about re-programming as long as you only transmit on the licensed frequency, but if I'm wrong please let me know. Thanks. Ned

In most cases, in order to transmit legally on a frequency band of the sort you're discussing, you must be licensed for that frequency _and_ you must use a radio which is "certificated" (formerly "type accepted") for use on that frequency band.

The certification is, in effect, a statement by the radio's manufacturer that it is compliant with the FCC regulations for that band - maximum power output, frequency accuracy, spurious emissions, and so forth.

Amateur radio transmitters are an exception to the rule. They don't have to be certificated, because the amateur radio service is intended to support experimental and home-brew use, and because the (licensed) operator has accepted legal responsibility for not transmitting in ways which break the regulations.

So... if you reprogram a commercial or public-safety radio onto a frequency band outside of what it was originally certificated for, or if you physically modify it, you're likely to void its certification, and it might not be legal to use it either on the original frequencies or on the new ones. You could reprogram it for amateur-radio use, though, and that'd be legal as long as its emissions met the standards.

>happy with it.

Unfortunately, I'm afflicted with an FT-90 as well, and I've purchased
both pieces of sh^W software. Neither is great, but RT Systems'
version is less fecally-replete than the Yaesu version.

RT is impossible to contact, their support os lousy if you ever *do*
get through in the few hours they deign to accept calls and in
general, they are the worst software vendor I've ever had the
misfortune of dealing with.

Their earlier versions are actually less buggy that the later version
-- the most recent of which messes up the oddball splits I have on
several channels. It does a full codeplug load maybe once every 3
attempts, and it puts everything in according to the ARS bandplan,
regardless of whether ARS is desired.

I'm ditching this POS radio and even-bigger POS software in favour of
an ICOM 208H, which itself is a compromise, since I can't get a
Motorola control head in the tight space of my Saturn.

I will second this suggestion. I've dealt with all the local retailers
and frankly nothing will beat HRO's prices, no tax, no shipping
charges and never a problem to deal with. I have ordered from both
stores, but I prefer the New Hampshire location personally - though
the Delaware location is equally pleasant.

I will *never* deal with Barry Electronics again, by the way. I felt
totally slimed going in there. The one time I did venture down there I
was being ignored in favour of a customer of apparantly middle-eastern
origin who wanted to buy "a fleet" of Icom VHF amateur radios and was
asking to have them modified to "transmit anywhere." He was also
asking about "secure scramblers" for them. While that was bad enough,
the clerk was giving him pricing for just that. This was all before
9/11 and if I'd remembered the exact date, believe me, I'd have
already contacted the authorities about it. It was sometime in the
spring of 2001 - that's all I can remember.

When I finally did get around to looking at the radio in which I was
interested, their prices were about 25% higher than HRO plus NYC
sales tax on top of that. Needless to say, I waited till Dayton and
bought there.

Rick Nevill <Qkv6c.63589$u_5.48259@fe2.texas.rr.com>...

^ I would like to to make a custom iambic keyer for a person with
^ quadraplegia. She mainly has use of only her index and ring
^ finger. She can only flex her thumb and cannot release the
^ thumb pressure at will.

My radio has a built-in keyer (Yaesu FT-897) so I made a simple key for it out of two Popsicle sticks, some wood blocks, and a few nails. My key has both a straight key and a paddle, one on each side of the block that holds the Popsicle sticks. The tension is adjusted by moving the stick into or out of the blocks that hold it. The nails provide tie-downs for the wires and contacts for the keys.

It works well. Perhaps you can use something similar as a test platform to find out what sort of key will work best for your friend.

Frank

Interesting article in a recent QST about a sip and puff keyer, might
be worth a look.

The mag is out in the car, but I will try to check later, unless
someone else has posted it.

Happy trails,

I have qa GP88 that has a loose mic jack. Rather than go to a service center I wanted to see if I could screw it up first. I don't see how you actually open the case. Are there special tools required? What's the procedure?

Thanks alot!

That was a Navy transmitter, not NIST. I was stationed at Lualualei
for almost two years in the mid '70s. I wonder if it is still on the
air now that they have switched most of their circuits to satellite.

Once again, the clock the individual wants plans for uses the signal from WWVB in
Ft. Collins, Colorado on 60 kHz.

## 1846. kenwood ts-700 crystals and split mod

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-19 16:50:05 UTC
From: gobo20@lycos.com
Message-ID: <f6a54aa0.0403190850.207765b0@posting.google.com>
Source record: 22448

can anyone give me the specs on the fixed freq crystals for a ts-700a?
the service manual does not detail them.

also, i understand there was a mod kit that would allow for repeater
splits across the freq segments (145/146, 146/147). is there a
schematic to be had anywhere for this kit?

thanks.

# 1847. FS: Atlas 210x with NB

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-19 16:53:34 UTC

ESTATE SALE

Atlas 210x with NB installed. SUPER NICE condition, honestly the best used one I've ever seen in my 27 years of hamming. It was in daily use up until the owner's sudden passing a few months ago. Price is $150 (FIRM) plus shipping. That's top dollar for a 210x, but this one rates it. Rig comes with a short DC power cord and a hand mic (looks like a Kenwood). The manual can be downloaded from the internet.

I get nothing from this. The money will go toward putting the deceased's daughter through college. It isn't much, but every dollar helps.

73,
Dean K5DH

# 1848. Re: How do you define the best transceiver ?

Newsgroup: rec.radio.amateur.equipment

I wonder what was Mr.Reay's purpose in publishing
his rather silly and somewhat infantile attention
seeking outburst that is quoted from him below?

Was it to demonstrate that not only is he a _LOSER_,
but that he is well aware of the fact?

Was it to demonstrate that anybody who holds, or who
has ever held, an M3/CB Fools' Licence can never be
a _REAL_ Radio Ham because of the associated
gentlemanly traditions?

Was it to demonstrate the really big mistake that was made
when the gangrenous degeneration that is the M3/CB Fools'
Licence was introduced?

Was it a further Freudian Slip on his part showing that
the insecurity that he holds to be in every _REAL_ Radio
Ham is a part of every fibre of his being and that he is
trying to make himself feel better by blurting out some
playground-style insults?

Was it to demonstrate that his sneering 'n' jeering in
the company and style of so many of the toilet-mouthed
gutter-denizens of this NG makes him a CBer fair and square?

Was it to demonstrate that the RSCB, of whose politbureaux
he is a significant member, has degenerated into a
cesspit of CBers and is no longer relevant to Ham Radio?

Was it to make a fool of himself in front of Victoria,
Rebecca and Michaela when the time comes that he is no longer
able to censor their Usenet access, and they get to see
what a hypcrite he is by comparing his behaviour against
the standards that he imposes on them as they grow up?

Was it to demonstrate that despite his _BOASTS_ of being in
possession of a number of degrees that he is incapable of
stringing two or more words together in a civil and rational
discussion?

Was it to demonstrate that once again, having sneered 'n'
jeered in the CB fashion he is going to run away when
challenged?

Was it because he was annoyed that his gaffe in stating
that e^(-jwt) was a function that decreased with increasing time
was so well publicised, and he wanted to stamp his tiny little
foot in a pique of anger?

I can't give any specifics, though I thought some of the keyers had
terminals on the back for a good paddle. Come to think of it, there
was a time when the paddles were not build into the keyer, so you had
to come up with something or buy something after you had the keyer.

But I can't see any problem taking any keyer, and merely adding some
wires across the paddles so you can have an external "paddle". No
matter what the keyer, those points have got to be available to solder
on some wires.

As for they "paddle" maybe try two microswitches sitting next to each other?
Maybe that's too small? I'm sure I've seen such "paddles" described in
the ham magazines in years gone by, and it was shown as an alternative not
something specific for the disabled, though I sure couldn't offer up
any dates.

I have the following items for sale that are excess to my needs. Prices do not include shipping. I will ship overseas.

Heathkit HW-202 2 Meter Transceiver and HWA-202-1 Power Supply.....$45 plus shipping.
Nice cosmetic condition. Receiver and power supply work fine.
Transmitter is not working
http://members.cox.net/hw202.jpg

Eico 315 Signal Generator.....$40 plus shipping
This signal generator that covers 75 kHz to 150 MHz in six bands. Output is either a modulated or a pure RF signal. The unit works well. The black paint on the dial bezel is peeling. Includes a copy of the manual.

http://members.cox.net/radiostuff9/eico315.jpg

Weston Model 904 Precision AC Voltmeter....$50 plus shipping
This meter measures 0-750 volts and the ranges are changed by making the appropriate connections on the top of the meter. The ranges are: 3, 7.5, 15, 30, 75, 150, 300 and 750 volts. This is a heavy for it's size, working unit in excellent condition.
http://members.cox.net/radiostuff9/ac_voltmeter.jpg
http://members.cox.net/radiostuff9/ac_voltmeter2.jpg

Precision Apparatus Series 85 VOM.....$25 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Knight Kit Audio Amplifier.....$35 plus shipping
Knight Kit amplifier from Allied Radio. No model number on the unit. I believe this unit is from the late 1950's or early 1960's. I have checked it out and it works. I had the matching tuner for this a year ago and it too did not have a model number.
http://members.cox.net/radiostuff9/knight_amp.jpg
http://members.cox.net/radiostuff9/knight_amp2.jpg

Telefunken AM/FM Radio.....$35 plus shipping
Vintage Telefunken AM/FM radio. The model is the Caprice 5451W. The radio is in nice shape cosmetically with no chips or cracks. It plays well and sounds very good on FM. AM is very weak. The dial cord is slipping on FM but it is not broken. The two "knobs "seen on the top are a reflection.
http://members.cox.net/radiostuff9/telefunken.jpg
http://members.cox.net/radiostuff9/telefunken2.jpg

Set of crystals for the Navy TDQ transmitter...$50 plus shipping
Their are 24 crystals of which 23 ( a few duplicates) are the original
Navy crystals; one crystal is not. The wooden box is in great shape
also. Here are the frequencies all in MHz: 5.80,12.90,13.10, 13.26,
13.50, 13.74,13.75, 13.82, 14.02, 14.02, 14.30, 15.62 ,15.64, 15.66,
15.68,15.78,15.84,15.85, 15.86,15.86,15.86,15.92,15.92, 16.00, 16.24
http://members.cox.net/radiostuff9/tdq_xtals.jpg
http://members.cox.net/radiostuff9/tdq_xtals2.jpg

Thanks for looking.

Ask Kenwood...or perhaps Cliff at Aavid.
I had the TS700A years ago, and bought the mod kit for the 145 splits from
AES.
It was a bracket, a dozen components or so on a small circuit board and
screws to screw to
it down in the radio. It worked great...wish I still had my old TS700!!

Hello Rick .... I have made some call buzzers for my patients over the years utilizing mercury switches. They are cheap, easy to mount on Velcro and can be made to respond with minimal motion. Perhaps using two beads either side of a pivot would work as I do not know of a double throw single pole Hg switch. Radio Shack had them in the past ...not sure now. Please feel free to e-mail me from QRZ.com. to discuss this or give me your phone number.

God Bless KI3R Tom Popovic Belle Vernon Pa.

ps ..there are systems out there that utilize eye movement for communication ...maybe modification is possible from that aspect ....

Hello, in need of some urgent help. I am having a horibble time soldering the shield of a coax cable to a copper pad in a circuit. I just can't get the solder to flow on the shield. What can i do? I don't know if it matters but the shield has the appeareance of aluminium. I"m hoping this isn't what it is but really dont' know. Please help. Thanks in advance

Aluminum would certainly be hard to wet with tin lead solder. If you
cut the strands, is the inside of each copper colored, or are they
silvery all the way through?

http://www.mods.dk

massive pdf selection of manuals no charge to download them.

check and if you have a manual that is not there you can upload it to
him.

why pay for a manual when you can d/l it no charge.

Greetings:

Re the Aluminum coax shield soldering.

If all else fails trim out enough and an inch or so back from the end
poke a hole in the braid and fish the inner insulation out and then trim
out the inner conductor for it's attachment point to the pcb. and double
up the shielding so it can be crimped inside a terminal lug and the
terminal lug either screwed to the ground connection or soldered to the
ground on the pcb.

I've seen some of these (only on the net) and have become interested in maybe purchasing one in the future.

My question is: which model is the best? Other than the fact that the 520 has no 160m band (I believe this is correct), what are other differences?

Thanks!
David

# 1865. FA: JRC JST-245 Transceiver + Accessories

I have for auction on eBay (http://www.ebay.com) a very nice JRC JST-245
Transceiver + accessories.
All items are in exceptional condition. See the Product Review in September
1995 QST for a glowing report. The transceiver puts out 150 watts, has a
built in Power Supply, and has the prettiest front
panels of any radio around. Including the original box, manual, power cord,
desk mic and deluxe external speaker.

Sorry, must have missed the qualifier. Thinking provincialy (USA), I guess.

Hi,
?? never heard that they doesn't work on 160m...
Other proof, the antenna tuner is preset to match 18 sub-bands between 1.8
and 28 MHz
Of course they work on 160 meters, as any good RTX !
but maybe not your antenna... Hi !

Review of TS-570D and others :
http://www.astrosurf.com/lombry/qsl-ts570.htm
Other models not reviewed : TS-570MG : 50W, and VG : 10W, 50 MHz 20W.

I am not sure what the previous post is talking about, but...The TS520S is
the best one. The 520 is the original, and does not have 160...but it does
have the dc-dc converter built in...if you want to use it mobile (??)
The SE was the last version, but I am not sure what were the diff's there. I
don't think it had the heater switch....
I have a 520S, and it will go down as a classic. Still has better sounding
SSB than say a 756PRO!!
